RICKETT'S & HAMMOND'S VENTILATING GLOBE LIGHT, combining an agreeable method of lighting, with convenient, simple, and efficient ventilation.

The advantages obtained are these.—
A TOTAL REMOVAL OF ALL PRODUCTS OF COMBUSTION.
A COMPLETE DISPLACEMENT OF HEATED AND VITIATED AIR.
AND A CONSIDERABLE ECONOMY IN THE CONSUMPTION OF GAS.
A GLOBE LIGHT will consume 5 to 7 feet of gas per hour, giving as much light as an ordinary three-light chandelier, with a consumption of 12 feet per hour.
5, AGAR STREET STRAND, LONDON, W.C.

LAMBERT, BROTHERS, Manufacturers of Lap-welded Boiler Tubes, Locomotive and Marine Engine Fittings, Wrought iron Welded Pipe, for Steam, or High-pressure Water and Gas, High pressure Steam and Water Valves, Hydraulic Machinery, Pumps, Closets, &c.; Stocks Taps and Dies, Chandeliers, and Patent Metallic Bedsteads.—Walsall.

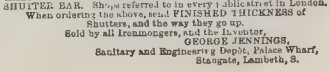
CAST STEEL BELLS,



One-third THE PRICE OF BRONZE. PEALS CAST TO ORDER.

NAYLOR, VICKERS, & CO. SHEFFIELD.

FIRE-PROOF CONSTRUCTION.—FOX & BARRETT'S PATENT. This improved system of fire proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private. The system combines ECONOMY with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages. The floor and roofs are formed by a combination of bars of wrought or rolled iron with concrete, so constructed that each floor becomes in effect a beam of artificial stone with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring boards, or of cement, asphalte, tiles, slate, or other material. Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling houses and domestic buildings, within the reach of every one. Further information may be obtained of the Proprietor of the Patent, MR. BARRETT, 12, YORK BUILDINGS, ADELPHI

NO SHUTTER BARS.

JENNINGS'S SHOP-SHUTTER SHOE. SHOP SHUTTERS are SHOD and SECURED by the above, at HALF THE COST OF THE UNSIGHTLY AND DESTRUCTIVE SHUTTER BAR. Shops referred to in every public street in London. HUBBUCK'S PATENT WHITE ZINC PAINT.
By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere
ADULTERATIONS. Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent. Whether sold under the name of "Improved Zinc Paint," or as the number Two or Three qualities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.
CHEAPNESS.—Not only is it cheaper per laboured weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.
EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."
THOMAS HUBBUCK & SON,
WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

Apply to Mr MACDONALD, Aberdeen; or to Mr. DAVID WILLET, London Agent, 404, Euston-road, N.W.

GRANITE OBELISK for SALE.—The beautiful OBELISK, in polished Grey Granite, that stood in the Eastern Nave of the Exhibition Building, is now OFFERED for SALE.—Apply to Messrs. H. POOLE & SON, Great Smith-street, Westminster. The Obelisk is erected at Lord's Wharf, Millbank, where it may be seen. It is suitable either for a monument or for an ornament for pleasure grounds.

TO CAPITALISTS, CONTRACTORS, and BUILDERS. TO BE SOLD, a valuable GRANITE QUARRY in North Wales Leasehold for 19 years unexpired (renewable) The Stone is equal to the best Jersey Granite for paving setts and building purposes, and has been very extensively introduced The Quarry is conveniently situated for shipping, and is in full and profitable work. The owners hold and will transfer advantageous contracts.—Apply to LEWIS, DARBISHIRE, & ASHWORTH, Solicitors, 21, Brown street, Manchester.

LITTLE CASTERTON FREESTONE.
Apply for prices, &c. to
OCTAVIUS N. SIMPSON, STAMFORD;
and see Specimens at the Office of
Messrs. PINDER SIMPSON & SONS, 29, Savile-row, London, and at the Museum of Practical Geology, Jermyn-street, W.
This stone (which is a perfect oolite), is raised in blocks of any portable size, and is about four feet thick in the bed. It will stand ANY WEATHER, is much used for water-works, and for the building and restoration of churches. When used as solar work it is not necessary to place it bed-wise. It works freely with a tooth-saw, and is wrought at a cheaper rate than any stone in the kingdom.

HY. GEORGE & COMPANY,
CAEN and AUBIGNY QUARRYMEN and GENERAL STONE MERCHANTS, CAEN WHARF, ROTHERHITHE, S.E.

DURABILITY of GUTTA PERCHA TUBING. Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter FROM SIR RAYMOND JARVIS, Bart. VENTNOR, ISLE of WIGHT. Second Testimonial:—"March 16th, 1863.—In reply to your letter received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state with much satisfaction, it answers perfectly. Many builders and other persons have lately examined it, and there is not the least apparent change since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B. From this testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF ROAD, CITY-ROAD, LONDON.

Both lots are in the occupation of a yearly tenant. May be viewed, and particulars had at the Bell Inn, Bearsted, of E. MARTIN, Esq. Solicitor, 2, New square, Lincoln's-inn; Messrs. CLUTTON, 9, Whitehall-place; at the Mart; and of Messrs. NORTON, HOGGART, & TRIST, 62, Old Broad-street.

WAREHAM, DORSET.—Important Sale of Machinery, comprising nearly 35 horse power steam engine, by Ransomes and Sims, Ipswich, 4 pan brick machines, mills, wire rope and drum, tramway, tip wagons, and all the valuable plant and machinery at the Sandford Clay and Pottery Works, with several hundred fine moulds, patterns, &c. designed by JOHN THOMAS, R.A.; for sale, without the least reserve.

MESSRS. CHINNOCK & GALSWORTHY will SELL by AUCTION, upon the PREMISES, immediately after the sale of the Estate, on THURSDAY, 8th SEPTEMBER, and following day, at TWELVE o'clock, by direction of the Liquidators of the Sandford Clay and Pottery Company (Limited), the whole of the valuable PLANT and MACHINERY of the extensive works, situate within half a mile of the Wareham Station on the London and South-Western Railway, very recently erected for the manufacture of building and fire bricks, tiles and pipes, and goods of all kinds, terra-cotta, &c. comprising an excellent 35-horse power horizontal steam engine, pair of 30-horse tubular boilers, Bradley & Craven's rotary oil-pressure brick machine, powerful 4-mould ditto pugging and clay grinding mills, tile and pipe machine, powerful drum with wire rope 20 tip wagons 1 ton yards of metal in tramway, endless bands, brick moulds, 56 wheelbarrows, crab engine, weighing machines, lathes, throwing wheels, jiggers, screw presses, two large shoot vats, with crank sieves, tanks, free pumps, shafts, driving pulleys, level, crab wheels, gear and machinery, large glaze grinding vat and gear, all quite new, vacuum gauge, 120 cast iron perforated plates, numerous tubs, sieves, lamps, pans, 70 gross of cranks, 6 casks of fine sand, quantities of dry and wet glaze, whitelead, felspar, ground flint, 95cwt. cobalt and other useful ingredients; also, a series of several hundred moulds and models, designed by the late JOHN THOMAS, R.A., for the manufacture of terra-cottas, china, earthenware, &c.; together with large quantities of shelving, racks, tables, benches, sheds, fitt ings, tools, implements, and all the effects upon the premises.—May be viewed a fortnight before the sale, and catalogues obtained of Mr. STEVENS, the Manager, at the works; of Messrs. MARCHANT & PEAD, Solicitors, 20, Great George-street, Westminster; and of the Auctioneers' Offices, 17a, Great George street, Westminster; and of Messrs CHINNOCK & GALSWORTHY, Land Agents and Surveyors, 11, Waterloo place, Pall Mall, London

---

KINGSTON HILL, near KINGSTON, and NEW MALDON, SURREY.—Two Villa Residences, and Eligible Freehold Building Land.

MR. WHITTINGHAM is instructed to SELL by AUCTION, at the GRIFFIN HOTEL, Kingston, on MONDAY, AUGUST 24th, at FIVE for SIX, Three lots of eligible BUILDING LAND, with a frontage of 200 feet to the Kingston Hill, close to the entrance to Richmond Park; Two lots of Building Land, situate on the New Epsom road, close to the village of Hook, and about a mile and a half from the Kingston Station; Six lots of Building Land, situate in Meadow grove, close to the town of Chertsey; also, Two substantial VILLA RESIDENCES, and Six lots of Building Land, situate close to the New Maldon Station on the South-Western Railway. The whole of the property is freehold, land tax redeemed, and title free. Nine-tenths of the purchase money may remain on mortgage at five per cent to be paid in nine years, by half yearly instalments; but the whole or any part of the balance may be paid off at any time without notice.—Particulars of sale may be had one week before the sale at the principal inns in the neighbourhood; of Messrs. RUSSELL & DAVIES, 59, Cannon-street, City, E.C.; of the Auctioneer, 14 Moorgate street, London, E.C. at whose office the plans may be inspected; and at the Place of Sale.

TO CLOCKMAKERS and OTHERS.—SUPERIOR TURRET-CLOCK.

MR. WHITTINGHAM has to announce that the SALE of MATERIALS at Addiscombe, near Croydon, on WEDNESDAY, 26th AUGUST, 1863, at THREE for FOUR o'clock in the afternoon, will include a large, well-made TURRET-CLOCK, width and height 2 feet 6 inches, without frame, one bell weighing 80 lb.; one bell weighing 40 lb.; brass dial; vane and compass, with letters. The clock is in good preservation, and is suitable for a large factory or other public building. May be viewed Monday and Tuesday preceding the sale. Catalogues may be obtained of the Foreman on the Estate; and of the Auctioneer, No. 14, Moorgate street, London, E.C.

BARNET, HERTS.—Eligible Freehold Building Land.

MR. WHITTINGHAM has to announce that several of the LOTS offered by Auction on the 14th instant were SOLD. The remaining Lots may be purchased by Private Contract, on application to the Auctioneer, 14, Moorgate-street, E.C.

TO GASFITTERS AND OTHERS.—150 ARGAND LIGHT GAS-METER.

MR. WHITTINGHAM has to announce that the SALE of MATERIALS, at Addiscombe, near Croydon, on WEDNESDAY, AUGUST 26, 1863, at FOUR o'clock in the afternoon, will include a 150 ARGAND-LIGHT GAS METER, by Stevens & Son, with regulator gauges, and a few pieces of main piping to be viewed on Monday and Tuesday preceding the sale. Catalogues may be obtained of the Foreman, on the Estate, and of the Auctioneer, 14, Moorgate-street, E.C.

ADDISCOMBE, near Croydon, Surrey.—Eligible FREEHOLD BUILDING LAND

MR. WHITTINGHAM has to announce that several of the lots were sold at the sale on Friday, July 31st, 1863; the remaining Lots may be Purchased by Private Contract, on application to the Auctioneer, No. 14, Moorgate street, London, E.C.

VALENCIA SLATE SLAB QUARRIES, COUNTY KERRY, IRELAND.

MESSRS. FULLER & HORSEY are instructed to SELL by AUCTION, at the AUCTION MART, London, on WEDNESDAY, OCTOBER 28 at TWELVE, in one lot, unless an acceptable offer be previously made by private contract, the extensive QUARRIES and MILLS of the VALENCIA SLATE SLAB COMPANY, situate in the Island of Valencia, County Kerry, Ireland. The works have been carried on by the present proprietors for nearly fourteen years, and a very large outlay has been made in opening the quarries, and in erecting the mills and the requisite machinery. The quarries are situate on the side of a mountain, about 420 feet above the sea level, and an opening has been made for working about 120 feet wide, running into the mountain to about the same depth, uncovering a succession of platforms of slates of various widths. The slate rock lies most conveniently for working, at an angle of about 25 degrees, and has a regular cleavage. The slabs are severed by wedges instead of by blasting, thus avoiding the large amount of waste occasioned by the latter process. The roof of the quarry is self-sustained, and is perfectly secure. The quality of the slabs is now well known and appreciated, and are taken in large quantities by the principal merchants in London and elsewhere. They take a beautiful and permanent polish, are particularly valuable for enamelling, are unaffected ingriously by furnace heat, and are raised in larger size than from any other quarry. The waste from the slab blocks is made into roofing slates, for which there is a ample local demand. The present yield is about 2,000 tons of slabs slate annually, but by a comparatively small outlay in an extension of the working this quantity may be doubled, the machinery at the mills being equal to prepare that quantity, and the demand at the present time being in excess of the capabilities of supply.

The mills are situate about 2½ miles from the quarries, are connected by a good road, easy of descent, and which is kept in repair principally at the expense of the county; but every facility would be afforded by the Knight of Kerry, who is the freeholder, for laying down a tramway by the side of the present road, which would much lessen the cost of transit. The mills are most advantageously placed, being immediately contiguous to the pier, at which vessels of 300 tons burden can load alongside, and there are no harbour dues nor wharfage payable. The harbour of Valencia is both safe and commodious, and freights to London are about the same as from the North Wales ports. The buildings are well arranged, and substantially erected. They are fitted with sawing and planing machinery of the best description, fitted by Blyth, of Limehouse; and there are overhead cranes, tramroads, and every appliance for saving manual labour. There are also ten dwelling houses, manager's residence and about thirty-five acres of farm land. There is a plentiful supply of water for the purposes of the mills, from a large open reservoir. The purchasers and workers are held by lease from the Knight of Kerry on easy terms. The present Company has expended upwards of £6,000, upon the property. They have succeeded in establishing the reputation of, and a market for, the slabs, and have thoroughly proved the existence and uniform character of the slate, and the extent to which the workings may be carried; and they have supplied and there are now approved modern machinery for the preparation of the slate for market, and it is confidently believed that the Works are now in that state that, in the hands of persons of individuals, very profitable results may be anticipated.—The Works may be viewed by Cards only, which, with further particulars, may be had of Messrs PALMER, NETTLESHIP, & ELAND, Solicitors, 4, Trafalgar square, Charing cross; at the *Mirland Countess Herald* office, Burn ngham; at the Gresham Hotel, Sackville-street, Dublin; at the Railway Hotel, Killarney; at the Adelphi Hotel, Liverpool; at the Mermaid, London; and of Messrs. FULLER & HORSEY, 13, Billiter-street, London, E.C.

TO BUILDERS AND OTHERS.—Cottenham House, Copse Hill, Wimbledon.

MR. NEWBURY BALL is instructed to SELL by AUCTION, on the PREMISES, as above, on TUESDAY, AUGUST the 25th, and following day, at TWELVE for ONE o'clock each day, all the valuable MATERIALS and Effects, taken down and sorted in suitable lots for the convenience of purchasers, comprising statuary and marble chimneys, Portland and York stone dwarf walls, coping, landings, and pavement, two of massive Portland pillars with caps and bases, many thousand good hard stock bricks, tiles and slates, beams and girders, fir and oak quartering, sound inch deal and 9-inch boards, sashes and frames, shutters and borings, water-closet fittings, mahogany and other doors, linings, carved and other ornamental work, mantels, dry yellow and polish grates and hatters, two conveyances, stories, portices, lobbies, fire wood, and other useful effects.—On view the day preceding the sale. Catalogues may be had of Mr. TOWNSEND, House and Estate Agent, Cottenham House, Wimbledon; and at the Auctioneer's Office, High-street, Wandsworth, S.W.

CHARING-CROSS RAILWAY.—CITY TERMINUS.—To BUILDERS, CONTRACTORS, PAVIORS, and OTHERS

MESSRS. WILLIS & HARROW are favoured with instructions from the Contractors to SELL by AUCTION on the PREMISES, on TUESDAY, AUGUST 25th, 1863, at ONE o'clock punctually, the valuable and useful MATERIALS of the Falcon Public-house, and the Range of Warehouses and Premises on the east side of Coaster's-row, comprising about 250,000 stock bricks, several tons of lead in pipes and gutters, plain and panelled doors, sashes and frames, paneled and other grates, stoves and ranges, quantity of pebble pitching and granite curb, and a variety of useful fixtures and fittings, &c.—May be viewed the day prior and morning of sale; and catalogues had on the Premises; at the Contractor's office, Worcester-street, Southwark; and of Messrs. WILLIS & HARROW, Auctioneers and Surveyors, 4, Newman's court, Cornhill, and West Molesey, Kingston, Surrey.

HYTHE, in KENT. FREEHOLD BUILDING LAND.—TO BE SOLD by AUCTION.

MESSRS RONALDS & SON, at the WHITE HART HOTEL, in Hythe, on WEDNESDAY, the 26th day of AUGUST, 1863, at TWO for THREE o'clock in the afternoon, in twenty six lots, all this piece of FREEHOLD LAND, situate between the Marine walk and Sidecliff, commanding from the High-street of the town of Hythe, in Kent, to the sea, containing six acres or thereabouts, admirably adapted for building purposes, as it commands an excellent view of the Hythe Bay and the English Channel, and has good roads on the west and south sides, 40 feet in width. The above land has been laid out for building sites in twenty-six plots, the frontages varying in quantities, and have been so arranged as to secure for nearly every plot a good sea view. The inland scenery in the immediate neighbourhood of Hythe is remarkable for its beauty and picturesque characters, and is unequalled in any part of the southern coast of Kent. The School of Musketry having now become a permanent establishment, and the demand for houses owing during this summer very considerably exceeded the supply, it is considered that capitalists may avail themselves of this investment to their advantage. The town council have expended upwards of two thousand pounds in the erection of ornamental and useful baths for the accommodation of visitors and other persons; and the importance of a direct railway to the town of Hythe having been now fully recognized, actual surveys of proposed lines of railway are at the present time being made by two competing companies, with an intention of applying during the next Session of Parliament for Bills for that purpose.—For prints, particulars and conditions of sale with lithographed plans, apply to the Auctioneers; or to Mr. EDWARD WATTS, Solicitor, Hythe.

60,000 Slates direct from the Quarry.

MR. V. BUCKLAND will SELL by AUCTION, at the MART, opposite the Bank of England, on MONDAY, the 24th AUGUST, in suitable lots, a cargo of excellent SLATES, direct from the Quarries near Bangor, consisting of about 60,000 in various sizes, from 16 inches by 8 inches to 24 inches by 14 inches.—Catalogues may be had at the Mart, and of Mr. V. BUCKLAND, Auctioneer, 89, Cannon street West, City.

LEYTON, ESSEX.—Second Portion of Freehold Building Land at Leyton green, comprising about 14 acres in 39 lots.

MR. JOHN M. DEAN will SELL by AUCTION, at the MART, on THURSDAY, AUGUST 27, at TWELVE, in 39 lots, about FOURTEEN ACRES of FREEHOLD BUILDING LAND, free of land tax, most suitable for the erection of villas and other residences, situate at Leyton-green, on the high road from Stratford to Walthamstow, within a short distance of the church and the railway stations at Leyton and Lea Bridge, and about five miles from London, possessing extensive frontages to Leyton road, Capworth street, Beaumont-road, and other good roads. The estate is high and dry, beautifully timbered, and will be submitted in lots, with good depths, suitable for the erection of superior residencies.—May be viewed, and particulars and conditions of sale, with plans, had 14 days prior to the day of sale, at the Mart; of Messrs STEVENS & BEAUMONT, Solicitors, 8, Old Jewry, E.C.; and of Mr. JOHN M. DEAN, Auctioneer and Surveyor, The Grove, Stratford, E.

OXFORD.—VALUABLE BUILDING MATERIALS, comprised in the several Houses in Beaumont-street and Magdalen-street, the intended Site for the erection of the Randolph Hotel.

MR. JOHN FISHER begs to announce that he is instructed by the Randolph Hotel Company to SELL by AUCTION, in the month of OCTOBER next, the above BUILDING MATERIALS; consisting of roofs, floors, doors, shop-fronts, sashes and frames, partitions, staircases, fittings, &c. which will be found peculiarly good from the circumstance that the houses have been built within a few years.—Further particulars will be advertised previous to the sale.

6,000 feet Bulk Timber, 8,000 feet Mahogany, 1,800 Planks, Deals, and Battens, 12s a hundred Flooring, 5,000 feet Quartering, Dry Cut Stuff, 70 Poles, 5 Ladders, 70 Doors, Marble Slabs Stone, &c

MESSRS. LEREW & LEREW will SELL by AUCTION, at the YARD, Camden-terrace, Camden Town, on MONDAY, AUGUST 31st, the above well-assorted STOCK, in about 300 lots.—Auction Offices, 2, Carlington-street, Hampstead-road.

In Chancery: "Kemp v. Nunn," "Nunn v. Kemp."—Valuable Freehold and long Leasehold Building Land, Residential Estates, Ground Rents, Dwelling houses, and Shops with land-tax, as to the principal part redeemed, Upper Tooting, Streatham, and Balham.

FRANCIS FULLER, the person appointed by the Judge to whose Court the above causes are attached, will SELL by AUCTION, at the MART, opposite the Bank of England, on MONDAY, the 31st day of AUGUST, 1863, at TWELVE precisely (by the peremptory direction in each cause of the High Court of Chancery, made in the said causes, with the approbation of the said Judge, several valuable FREEHOLD and LEASEHOLD ESTATES, in Tooting, the world-famous place to combine a first-rate business. Unexceptionable references required.—For further particulars, apply, by letter only, to Mr. WILMOT, Solicitor, Chippenham.

BOOKCASES in MAHOGANY, and WALNUT, sub-boards with plate glass backs, massive Dining-tables, Ladies' Wardrobes, with long fo ding-doors and glass panels, Inlaid Cabinets and Chiffoniéres, Easy-chairs, &c. A variety of new designs of the above articles, and of the best manufacture, on inspection in the extensive Show Rooms of ROBERT FISHER & CO. Cabinet-makers and Upholsterers, 32, Finsbury-place, corner of Finsbury square.

N.B. Magnificent designs in drawing and dining room carpets, 2s 9d and 3s. per yard. Marble-top Washstands, 22s.; Walnut Drawing-room Suites, covered in velvet, thirteen guineas.

NOTICE.—NOT REMOVED.—G. SUFFELL, 132, Long-acre, London, W.C. maker of improved Theodolites, Levels with permanent adjustments, Needle-socket Drawing Instruments, Adjusting Dividers, Metallic Edge Rules, &c.; Measures of all nations, respectfully requests Engineers, Surveyors, Contractors, and the Profession in general, who have for many years favoured him, to forward all orders and account to the above address.

N.B. C. SUFFELL was the only exhibitor of these instruments at the late International Exhibition. (See Jurors' Report.)

NOTICE.
BROWN & GREEN'S KITCHEN RANGE WAREHOUSE will shortly be REMOVED to the NEW PREMISES, 72–74, Bishopsgate-street Within, a few doors from the present establishment. These will afford accommodation for a still larger stock of their Patent Prize Medal Ranges and Stoves, Register Grates, and Cooking Utensils, to meet the great public demand, and also for the consequent more extensive execution, by the manufacturers themselves, of all descriptions of hot water, bath, laundry, and steam work.
31, Bishopsgate-street Within, July, 1863.

CONTRACTS.

BOROUGH of TYNEMOUTH.—To BUILDERS, BOILER MAKERS, IRON FOUNDERS, PAINTERS, and CONTRACTORS.—TENDERS are required for the Builders', Smiths', Iron Founders', and Painters' Works necessary in making certain ADDITIONS, ALTERATIONS, and RENEWALS, and for CLEANING, PAINTING, and WHITEWASHING, at the Baths and Wash-houses, North Shields. Plans and specifications may be inspected, and further information obtained on application to Mr. THOS. ROBSON, Borough Surveyor, Norfolk street, North Shields. Satisfactory securities will be required for the due performance of the Works. The lowest or any Tender will not necessarily be accepted. Sealed Tenders, endorsed "Works at Baths and Wash-houses," to be delivered on or before MONDAY, the 7th day of SEPTEMBER next, to THOMAS CARR LIETCH, Town Clerk.
Tynemouth, August 15th, 1863.

THE Committee appointed by the Town Council of the Borough of Buckingham is desirous to receive PLANS, SPECIFICATIONS, and TENDERS for the ERECTION of a FLAT IRON GIRDER FOOT-BRIDGE over the river in the Borough, with the necessary approaches and abutments complete. The Bridge must have a clear span of 32 feet, with a roadway of 5 feet clear, and be at the same level as the present bridge. The Plans, Specifications, and Tenders to be sent to the Town Clerk, Buckingham, on or before the 5th SEPTEMBER next. GEO NELSON, Town Clerk.
Buckingham, 14th August, 1863.

CONTRACTS.

SLUICE COCKS and HYDRANTS.—The Directors of the Fylde Waterworks Company are prepared to receive TENDERS for a SUPPLY of SLUICE COCKS, varying from 2in. to 3in. in diameter inclusive. They are to have best gunmetal faces and two socket ends. A large number of Hydrants will also be required. Each sluice cock and hydrant to be provided with a surface box. Tenders to state the price of each size of sluice cock, of each hydrant, and of each surface box, including delivery at the Company's pipe yards in Blackpool, Eastwood, Kirkham, or Lytham. Tenders to be sent in to Mr. T. B. FOSTER, Civil Engineer, 23, John Dalton-street, Manchester, on or before the 29th instant. The Directors do not bind themselves to accept the lowest or any Tender.

LEEDS CORPORATION WATERWORKS.—TENDERS WANTED for COVERING WOODHOUSE RESERVOIR, in separate Contracts, as follow:—
Contract No. 1.—For the Construction of the Brick Pillars and Arches, &c., and Fixing Iron Girders and Tie rods, &c.
Contract No. 2.—For the Supply of Cast-iron Girders and Ventilators.
Contract No. 3.—For the Supply of Wrought iron Tie-rods and Bolts and Nuts.
The plans and specifications may be seen after THURSDAY, the 20th instant, at the Office of Mr. EDWARD FILLITER, C.E. Borough Surveyor, and Engineer to the Waterworks, Town Hall, Leeds.—Tenders to be sealed in, on or before THURSDAY, the 3rd of SEPTEMBER, addressed to "The Waterworks Committee," Town Clerk's Office, Leeds, and endorsed "Tender for Covering Woodhouse Reservoir."—By order,
JOHN EDWARD SMITH, Town Clerk.

FURNESS RAILWAY.—BARROW DOCKS.—CONTRACT for WORKS.—The Directors of the Furness Railway Company are prepared to receive TENDERS for the CONSTRUCTION of a DOCK and TIDAL BASIN (about 150 acres area), with wharf walls, roads, bridges, sea embankments, dredging and other Works. The drawings may be seen on and after the 22nd instant, at the Office of the Company's Engineers, Messrs. McCLEAN & STILEMAN, 24, Great George street, Westminster, S.W. Contractors who wish to Tender may obtain lithographed copies of the drawings, bills of quantities, specification, and form of Tender, on application to the Engineers; or at the Secretary's Office, Barrow-in-Furness, Lancashire, on payment of £5 5s. Tenders must be addressed to the Secretary, 9, Old Burlington street, London, W. on or before the 7th SEPTEMBER next. The Directors do not bind themselves to accept the lowest or any Tender.
DEVONSHIRE, Chairman.
JAMES RAMSDEN, Secretary.
Barrow-in-Furness, 6th August, 1863.

TO BUILDERS.—Persons willing to CONTRACT with the Justices of the County of Kent for the ERECTION of a POLICE STATION at Cranbrook, may see the plans and specifications at the Office of the County Surveyor, Maidstone, any day, except Sunday, between the hours of TEN and FIVE. The work is to be tendered for agreeably to the form of Tender, to be obtained at the "County Surveyor's Office, where sealed Tenders, endorsed "Tender for Cranbrook Police Station," are to be delivered by NINE o'clock in the forenoon of TUESDAY, the 8th SEPTEMBER, 1863, and persons tendering are to be in attendance at the Courts of Justice, Maidstone, at HALF-PAST TWELVE o'clock on that day. Neither the lowest nor any other Tender will be accepted unless approved of in all particulars, and security will be required for the performance of the contract.
H. A. WILDES, Clerk of the Peace.
Maidstone, August 21, 1863

CAST-IRON PIPES.—To IRONFOUNDERS.—The Directors of the Fylde Waterworks Company are prepared to receive TENDERS for the SUPPLY of PIPES of the following diameters and lengths:—

Diameters in inches..	.. 6	.. 5	.. 4	.. 3
Lengths in yards	1,700 .. 9,600	.. 2,900	.. 2,600	.. 13,000

The pipes will be laid in the towns of Blackpool, Southshore, Fleetwood, Kirkham, and Lytham.—Specifications and form of Tender, price 10s. may be obtained at the Office of Mr. T. B. FOSTER, Civil Engineer, 23, John Dalton-street, Manchester, and Tenders must be sent in to Mr. T. A. WILKINSON, Secretary, Waterworks Office, Kirkham, not later than 1st SEPTEMBER next. The Directors do not bind themselves to accept the lowest or any Tender.

HALIFAX CORPORATION WATERWORKS.—WORKS in the LUDDENDEN VALLEY.—To CONTRACTORS.—The Corporation of Halifax are ready to receive TENDERS for the CONSTRUCTION of the WORKS included in the following Contracts:—No. 1, or Warley Moor Contract, comprising the Construction of a large Reservoir on the By-brook with the Embankments and masonry connected therewith; and a Conduit about 1,950 yards in length from that Reservoir to the Pulshaw Stream, near Castle Carr. No. 2, or Midgley Moor Contract, comprising the Construction of an open Watercourse, from Low Brown Knoll Flat to the Reservoir on the Fly level, about 2,080 yards in length, with overflows, shafts, bridges, and culverts connected therewith; and two Residuum Lodges; and No. 3, or Saltonstall Contract, comprising the Construction of a Masonry Conduit about 3,950 yards in length, the piercing and lining of a Tunnel 970 yards in length, with the sinking of two shafts, the laying and jointing of about 6810 lineal yards of cast iron pipes of 3, 18, 14, and 12 inches diameter, with all bridges, admission and outlet wells, observatories and other works connected therewith. The plans, sections, and drawings of the several contracts may be seen, and specification and forms of Tender obtained, at the Town-hall, Halifax; and at the offices of the Engineer, J. F. BATEMAN, Esq. F.R.S. 9, St. James-squares, Manchester, and 16, Great George-street, Westminster, on and after WEDNESDAY next, the 19th AUGUST, 1863. Sealed Tenders must be addressed to and left with ALDERMAN MINSON WAVELL, Esq. Town Clerk, Halifax, on or before MONDAY, the 14th SEPTEMBER, 1863, and endorsed with the name of the particular Contract for which it is a Tender. The Corporation do not bind themselves to accept the lowest or any Tender, and they may, if they see fit, let the whole Work in one Contract.

TO BUILDERS.—TENDERS are required for TAKING DOWN and RE-BUILDING No. 9, BECKFORD ROW, Walworth. The drawings, specification, and information may be seen at the Office of Mr. ROBERT PARIS, 5, Worship-street place, Lambeth, on and after FRIDAY, the 28th day of AUGUST instant.

CONTRACTS.

COAST GUARD CONTRACT.—NOTICE to BUILDERS and CONTRACTORS.
Persons desirous of TENDERING for the ERECTION of a COAST GUARD STATION at Rye Harbour, in the county of Sussex, may inspect the Drawings and Specification at the Watch-room of the Coast Guard Station, Rye, or at this Office, between the hours of TEN and FOUR, from TUESDAY, the 18th instant, to TUESDAY, the 1st SEPTEMBER now next ensuing, and both inclusive (Sundays excepted).
Tenders to be sent to this Office not later than TWELVE o'clock at noon of WEDNESDAY, the 2nd SEPTEMBER, under seal and directed to the Commodore Controller General of Coast-Guard, and endorsed "Tender for Rye Harbour."
The Lords Commissioners of the Admiralty do not pledge themselves to accept the lowest or either of the Tenders.
Dated this 17th day of August 1863, at the Admiralty.
Coast-Guard Office, 12, Spring-gardens, London, S.W.

WAR DEPARTMENT CONTRACT.—NOTICE to BUILDERS.—TENDERS are required for REFORMING the EASTERN DEFENCES, TOWER of LONDON.
Parties desiring to Tender for these works are required to attend at this Office on MONDAY, the 31st day of AUGUST, 1863, at TWELVE o'clock at Noon, to appoint a SURVEYOR to take out the Quantities in conjunction with the Government Surveyor. Each party will be required to pay the sum of One Guinea for the quantities.
The Secretary of State does not bind himself to accept the lowest or any Tender.
Royal Engineer Office, London District, 11, James-street, Buckingham gate, S.W. 21st August, 1863.

WAR DEPARTMENT CONTRACT.—NOTICE to BUILDERS.—TENDERS are required for the CONSTRUCTION of a SEA WALL at the foot of Cliff, in front of Tarefield Battery, Head Freshwell, Isle of Wight, in Portsmouth District.
Parties desiring to Tender for the execution of this work must leave their names at this office on or before the 24th day of SEPTEMBER, 1863, and pay the sum of ten shillings and sixpence for the Bills of Quantities, which will be forwarded to each party as soon as prepared by the Government Surveyor.
The Secretary of State does not bind himself to accept the lowest or any Tender.
Royal Engineer Office, Portsmouth, 22nd August, 1863.

TO BUILDERS and CONTRACTORS.—PARISH of ST. PANCRAS, MIDDLESEX.—Notice is hereby given, that the Directors of the Poor of this Parish will meet at the Vestry Hall, King's-road, Pancras-road, on TUESDAY, the 15th day of SEPTEMBER next, at TWO o'clock in the afternoon, to receive and consider TENDERS from Persons willing to CONTRACT for GENERAL REPAIRS at the WORKHOUSE, agreeably to the terms of specification, to be seen at the Vestry Offices, as above, where further particulars, with form of Tender, may be obtained, on the deposit of 1l. Security will be required for the due performance of the contract. No Tender will be received or accepted, unless made out on one of the printed forms. Tenders must be delivered, sealed and under cover, before TWO o'clock in the afternoon on the said 15th day of SEPTEMBER; and the persons Tendering, or their agents, are required to be in attendance at the said Offices, at THREE o'clock in the afternoon of the above mentioned day. The Directors do not bind themselves to accept the lowest or any Tender.—By order of the Directors of the Poor,
FRANCIS PLAW, Clerk.
Vestry Offices, Pancras-road, N.W. August 27, 1863.

PONTEFRACT UNION WORKHOUSE.
To BUILDERS.—TO BE LET, by TENDER, the several WORKS required in the ERECTION of a NEW UNION WORKHOUSE, at Pontefract, for the Pontefract Union. The plans and specifications may be seen at my Office, in Pontefract, from WEDNESDAY, the 26th day of AUGUST, to FRIDAY, the 4th day of SEPTEMBER, 1863; and on which last-mentioned day, before FOUR o'clock in the afternoon, sealed Tenders must be delivered to me. Bills of quantities for the several contracts may be obtained, on written application, at the Offices of the Architects, Messrs. LOCKWOOD & MAWSON, Post-office buildings, Bradford, or 10, Lincoln's-inn-fields, London. The lowest Tender will not necessarily be accepted.—By order,
WM. SAVILL WOOD, Clerk to the Guardians, Pontefract.
Pontefract, August 19, 1863.

SALTBURN-BY-THE-SEA.—To BUILDERS.—TENDERS are required for the ERECTION of FOUR FIRST CLASS DWELLING HOUSES, at the above named watering place, according to plans and specifications which can be seen at my Offices, Feetham, Darlington, from THURSDAY, AUGUST 27th, until TUESDAY, SEPTEMBER 8th. The various Tenders to be delivered to me not later than NINE o'clock a.m. on WEDNESDAY, SEPTEMBER 9th.
JOHN ROSS, Architect.

TO CONTRACTORS and OTHERS. The Directors of the Eastbourne Gas Company are desirous of receiving TENDERS for TAKING UP the present MAIN Gas Pipes and Works to Terminus-road, and thence to the junction of Cornfield-road and Seaside road, and Langney road and Terminus road, and RELAYING NEW MAINS of the following dimensions:—viz. 300 yards of the remainder of 18-inch main, from the works under the railway; 300 yards or thereabouts of 12-inch main, thence to Terminus-road; 300 yards or thereabouts of 9-inch main, thence to the junction of Cornfield-road and Seaside road; and 600 yards or thereabouts, from the end of the 12-inch main in Terminus road to the junction of Langney-road and Terminus road. The contractor to find all lead and other materials, except socket pipe, elbows, and P piece, as is to take up the old and relay the new main under the direction, and to the satisfaction of, the Directors, their Engineer, or Manager; and to connect the new mains so that there be no stoppage in the supply of gas to the town. The Tenders to state the price per yard for each size of main, and to be delivered at the Office of the Company, 7, Terrace, Eastbourne, on or before the 5th day of SEPTEMBER next. The Directors do not bind themselves to accept the lowest or any Tender.
H. CAMPION COLES, Secretary to the Company.
Eastbourne, August 25, 1863.

[For remainder of Contracts see next Page.

CONTRACTS.

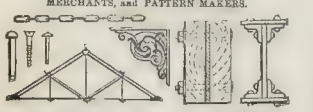
GRIMSBY ROYAL DOCK HOTEL.—To BUILDERS.—TENDERS are invited for the ERECTION of a NEW HOTEL, adjoining the Royal Dock, at Grimsby. Plans and specifications may be seen at the Offices of the Architect, from TUESDAY, 1st SEPTEMBER 1863, to TUESDAY, 8th SEPTEMBER. No pledge given to accept the lowest or any Tender. Forms of Tender, and any further particulars, may be obtained by application to the Architect, Mr. M. E. HADFIELD, Corn Exchange-chambers, Sheffield, to whom the Tenders must be sent, on or before the 22nd SEPTEMBER, 1863.

TO CARMEN, DUST CONTRACTORS, and OTHERS.—TENDERS are required for the DELIVERY of 30,000 YARDS of RUBBISH, or any portion, to Battersea fields, close to the London, Chatham, and Dover works. Parties wishing for a shoot may deliver Tenders, stating quantity, time of delivery, and price, on or before THURSDAY next, SEPTEMBER 3rd, to J. HARE, Contractor, Park road, Clapham, S.
August 26, 1863

TO MASONS, BUILDERS, and OTHERS.—TO BE SOLD, by TENDER, about 44 tons of IRISH MARBLE (Black), in thirty blocks, averaging in length 4 feet 6 inches by 2 feet square. Tenders to be sent in by the 14th SEPTEMBER, addressed, "Coal Consumers' Company, West street, Gravesend," where the marble may be seen, and further particulars obtained.
Gravesend, 27th August, 1863. W. NEWMAN, Secretary.

TO BUILDERS.—TENDERS are invited from Builders, &c. who are willing to CONTRACT for the ERECTION of a CORN WAREHOUSE at the Polegate Station of the London and Brighton Railway. The plan and specification can be seen, and all other particulars obtained, by applying at the Office of GEORGE ADAMS, Corn Merchant, Willingdon, near Hurstgreen, Sussex, not later than SATURDAY, the 12th SEPTEMBER next after which date no further Tenders will be received.

TO IRON MERCHANTS and OTHERS.—The Directors of the Eastbourne Gas Company are desirous of receiving TENDERS for the SUPPLY of the following CAST-IRON SOCKET PIPES, of the best Yorkshire Metal, and proved, viz.—100 yards or thereabouts of 18 inch; 260 yards or thereabouts of 12 inch; and 760 yards or thereabouts of 9 inch, of the usual lengths. Tenders to be delivered at the Office of the Company, 7, Terrace, Eastbourne, on or before the 5th day of SEPTEMBER next, and to state the weight per yard of each description of pipe. The Directors do not bind themselves to accept the lowest or any Tender.
J. H. CAMPION COLES, Secretary to the Company.
Eastbourne, August 25, 1863.



TO BUILDERS.—Persons disposed to TENDER for the ERECTION of SCHOOLS, &c. in connexion with the Old Meeting, Kidderminster, may see the plans, specification, and conditions of contract, on and after MONDAY next, the 31st instant, in the Vestry adjoining the Old Meeting House. Bills of quantities, price 10s. (returned to parties sending in a Tender), and any other information, may be obtained at my Offices, from MONDAY, the 31st instant, to THURSDAY, the 3rd of SEPTEMBER, on which latter day sealed Tenders are to be delivered to JOSEPH TAYLOR, Esq., Kidderminster, before FOUR o'clock p.m., endorsed, "Tender for Schools." The Committee do not bind themselves to accept the lowest or any Tender. ALEX. JOHNSON Architect.
Union Chambers, Birmingham.

SHREWSBURY SEWERAGE.—The Improvement Committee are prepared to receive TENDERS for the construction of the MAIN OUTLET SEWER, from the River Severn, at or near Frankwell Quay, to the Bridge over the Welsh Bridge at Shrewsbury. Plans, sections, and specification may be inspected at my Office, on and after THURSDAY, the 27th instant. Printed forms of Tender, and printed copies of the quantities, to be obtained in duplicate on payment of 5s. Sealed Tenders to be sent to my Office, not later than TWELVE o'clock, noon, WEDNESDAY, the 30th of SEPTEMBER next, and marked "Tender for Main Sewer."—Further particulars may be obtained from Mr. T. CURLEY, C.E. Hereford. The Council and Committee do not pledge themselves to accept the lowest or any Tender. J. J. FEELE, Town Clerk.
Guildhall, Shrewsbury, 22nd August, 1863.

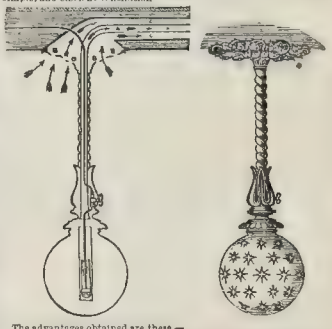
JAMES HAYWOOD, JUN.
PHŒNIX FOUNDRY and ENGINEERING WORKS, DERBY.

NOW OPEN, YOUNG'S IRONMONGERY WAREHOUSE,
No. 24, Davies-street, Three Doors from Oxford-street.
For the supply of Builders, Carpenters, Upholsterers, Smiths, Bellhangers, and the Trade in general, at wholesale prices. In connection with his Old Establishment, No. 18, Ramsford-street, Manchester-square, running out of Baker-street, Portman-square, London. W

FOR SALE, TWO new first class CORNISH BOILERS, weighing, exclusive of mountings and fittings, six tons each; dimensions, 2 feet long, 5 feet 6 inches diameter, with flue, 3 feet diameter. Made by Hortons, of Smethwick, and arranged for working together or separately. Each boiler is provided with the necessary furnace mountings, also fittings as follows:—One stop steam valve, two stop feed valves, two safety valves, two gauge cocks, two steel levers and frames, blow-off cock, float gauge, and damper at base.—May be seen on application to Mr. MILLER, 6, Bridge-road, Lambeth.

THE INTERNATIONAL EXHIBITION PRIZE MEDAL, AWARDED 1862.
ESTABLISHED 1744.
AUSTIN'S IMPERIAL PATENT SASH and BLIND LINES
To BUILDERS, CARPENTERS, and BLIND MAKERS.
J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his
IMPERIAL PATENT FLAX SASH-LINES,
of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.
They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

J. TYLOR & SONS' PATENT BATH APPARATUS.



The bath and boiler may be fixed in the same or separate rooms anywhere below the level of cold-water cistern. Open or close fire at pleasure. No brickwork setting nor hearth required.
Estimates given from architects' drawings, or by inspection of buildings.
Catalogues, containing Nine Illustrations of different methods of heating baths, sent on application to the Manufacturers, J. TYLOR & SONS, Warwick-lane, Newgate-street, London.

BUILDINGS and SHIPS EFFECTUALLY SECURED AGAINST LIGHTNING.
PATENT LIGHTNING CONDUCTORS, according to the system of Sir Snow Harris, F.R.S. as now universally adopted in every department of the Public Service, supplied and carefully fitted in every detail, under the immediate instructions of Sir Snow Harris, by G. W. GRAY, who has effectually secured a large number of ships, public buildings, and magazines against the destructive agency of lightning, including the Houses of Parliament, magazines, afloat and on shore, of the War Department and many churches and other important structures. Buildings surveyed, and plans and estimates submitted, if called for.
J. W. GRAY & SON, 114, Fenchurch-street, E.C.

PROTECTION from LIGHTNING.
HART & SON
Beg to call the attention of Architects, Builders, and the public to their
IMPROVED LIGHTNING CONDUCTORS (SPRATT'S PATENT),
As presenting the MOST EFFECTIVE MEANS of OBTAINING SECURITY from LIGHTNING. They are economical, easily fixed, and APPLICABLE TO ALL BUILDINGS, including Private Houses, Churches, Chimney-Shafts, Barnes, Powder Magazines, &c. &c.
Price lists and estimates on application.
HART & SON,
WHOLESALE AND MANUFACTURING IRONMONGERS,

LIGHTNING CONDUCTORS.
R. S. NEWALL & CO. Patentees of the COPPER ROPE LIGHTNING CONDUCTOR, supply the same, with the point and all staples, ready for fixing, at the following prices:—
Three-eighths-inch diameter ..... 3s. 6d. per foot.
Half inch diameter ..... 1s. 6d. "
Five eighths inch diameter ..... 2s. 0d. "
R. S. Newall & Co.'s Patent Copper Rope Lightning Conductor is being supplied by architects, engineers, and erectible men, in all parts of the world.
Offices—130, Strand, London.
" Gateshead-on-Tyne.
" 97, Dale-street, Manchester.
" 68, Anderson-quay, Glasgow.
" 17, South Castle-street, Liverpool
" Exchange buildings, Dublin
" 7, Frederick street, Aberdeen.

RICKET'S & HAMMOND'S VENTILATING GLOBE LIGHT, combining an agreeable method of lighting, with convenient, simple, and efficient ventilation

The advantages obtained are these.—
A TOTAL REMOVAL OF ALL PRODUCTS OF COMBUSTION.
A COMPLETE DISPLACEMENT OF HEATED AND VITIATED AIR.
AND A CONSIDERABLE ECONOMY IN THE CONSUMPTION OF GAS.
A GLOBE LIGHT will consume 5 to 7 feet of gas per hour, giving as much light as an ordinary three-light chandelier, with a consumption of 12 feet per hour.
3, AGAR STREET STRAND, LONDON, W.C.

COMBINED MACHINE, capable of sawing, cross cutting any length, mitering, tenoning, rabbeting, grooving, &c. &c. This new line may also be used for moulding, beading, tongueing, and trenching, for an additional sum of 4l. 4s.—For further particulars apply to ARTHUR & JAMES RIGG, Engineers, George street, Chester.

THE PATENT IRON WINE BINS and BOTTLE DRAINERS (of Barbon & Sons, of Paris) possess every advantage. Prices, from 15s. per 100 bottles; all sizes, open or locking up. Sole Depôt, 27, Margaret street, Regent-street, London, W. Builders and trade supplied on liberal terms.

THE PRIZE MEDALS,

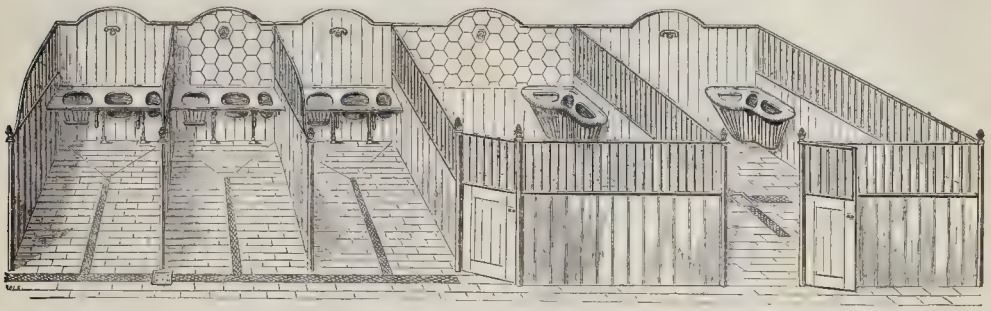
LONDON, 1851. PARIS, 1855. LONDON, 1862.

AWARDED TO

COTTAM & COMPANY,

No. 2, WINSLEY-STREET, LONDON, W.

FOR PROGRESSIVE AND GENERAL IMPROVEMENTS IN



STABLE FITTINGS AND HARNESS BRACKETS.

PATENTEES AND ORIGINAL INVENTORS OF

THE IMPROVED SYSTEM OF STABLE AND HARNESS FITTINGS,

PATRONISED BY THE ENGLISH AND FRENCH GOVERNMENTS, AS WELL AS BY THE PRINCIPAL NOBILITY, GENTRY, AND HUNTING ESTABLISHMENTS IN THE KINGDOM.

SECURITY FROM ACCIDENT by the use of the Patent Halter Guide and Improved Curved Top-plate; PROMOTION of HEALTH, COMFORT, and CONDITION, by the cleanliness and power of resisting infection of the Mangers and Troughs; and also of the Patent Drop Cover, to curtail the quantity of water to be imbibed. ECONOMY in the USE of FOOD, from the improved formation of the Fittings, and by means of the Patent Portable Seed-box, are some of the peculiar recommendations of Cottam's Patent Componised, Enamelled, and Galvanized Iron Fittings for Stalls and Loose Boxes.

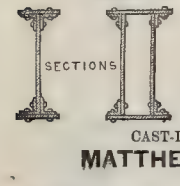
COTTAM'S PATENT COMBINED SADDLE and HARNESS BRACKETS; IMPROVED SURFACE GUTTER, WITH MOVEABLE SAFETY COVERS; Sanitary Traps, Cheap and Durable Corn-bins, and every Article requisite for the Stable and Harness-room.

IRON GATES, FENCING, and HURDLES MADE by MACHINERY.

COTTAM'S newly-invented REGISTERED NOISELESS MANGER SHACKLE and GUIDE FOR HALTER-STRAP, and IMPROVED VENTILATING HARNESS BRACKETS, are only to be obtained from the Inventors, and can be seen in use at their Manufactory.

COTTAM & CO. exhibit for inspection, at their Iron Works, 2, Winsley-street, W., an extensive range of full-sized Stalls, Loose Boxes, and Harness Rooms, the most complete that can be imagined.

ILLUSTRATED CATALOGUES and LITHOGRAPHS free, on application to COTTAM and CO. 2, WINSLEY STREET, Oxford-street, London, W.



COTTAM & CO.'S only address in London, is 2, WINSLEY STREET, W.

N.B. WINSLEY STREET IS THE STREET OPPOSITE THE PANTHEON.

JUROR—Class XXVI. GREAT EXHIBITION, 1851.

JUROR—Class XXX. INTERNATIONAL EXHIBITION 1862.

PAPIER MACHE AND CARTON PIERRE WORKS,
49, RATHBONE PLACE, W.
GEORGE JACKSON AND SONS
(Established in 1750)

Beg the attention of Architects, Builders, Decorators, and the trade in general, to their large assortment of Enrichments for Ceilings and Cornices, in the Gothic, Elizabethan, Italian, Renaissance, Louis XIV XV XVI and many other styles; also rich ornamental Panel Decorations, Elizabethan and Gothic Dados, Door Caps, Mouldings of all sizes, and to their varied selection of Centre Flowers for Ceilings, Gothic Bosses, Trusses, Cornice and Pilaster Caps, all executed in the highest style of art.

The large and weighty Ornaments of GEORGE JACKSON and SONS in decorations of Drawing and Dining Rooms, Libraries, &c. for powerful lights, or in buildings, many of which they have had the honour of executing under Architects of the highest eminence, obtain them with confidence to direct notice to that branch of their business.

Upholsterers are invited to inspect the large variety of Glass Frames, Tables, Cornices, Screens, Candelabra, &c. The large extent of their works, and the recent adoption of steam power and machinery, enable them to offer very superior advantages in materials and speed; while for design, quality, relief, and finish, they flatter themselves they stand unrivalled.

DESIGNS MADE FOR ANY WORKS.

PAPIER MACHE AND CARTON PIERRE WORKS, 49, RATHBONE PLACE, LONDON, W.

FIRST-CLASS MEDAL, EXPOSITION UNIVERSELLE, 1855.

PRIZE MEDAL—Class X. (c) INTERNATIONAL EXHIBITION 1862.

LITHOGRAPHED DESIGNS OF CEILING FLOWERS, &c. SENT FREE ON APPLICATION.

PATENTEES OF THE CANVAS PLASTER.

VIEILLE MONTAGNE ZINC.

THE ITALIAN-FORMED ZINC is much approved of by Architects and Engineers on account of its strength, durability, and appearance. On account of the light framing required, roofs, including framework and fixing, can be covered with it FOR £3 PER SQUARE up to 25 feet span. Sheds of larger span, including posts, 4l. per square. Architects are cautioned against allowing anything thinner than No. 13 gauge (20 oz.) to be used. ALL PLATES SHOULD BE REJECTED NOT BEARING, in addition to the Company's name, the words "ROOFING ZINC," and the gauge.

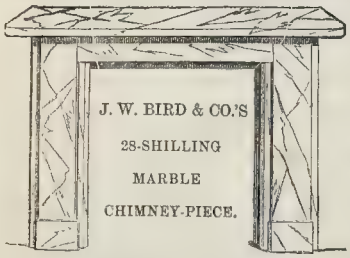
OLD ZINC RETAKEN AT HALF THE MARKET PRICE OF NEW.

For Designs and Estimates for Roofs, with Timber or Iron Framework, IRON CHURCHES COVERED WITH ZINC, and Buildings for the Colonies, apply to

THE COMPANY'S SURVEYOR,
12, MANCHESTER BUILDINGS, WESTMINSTER, S.W.

BATH STONE OF THE BEST QUALITY.

PICTOR & SON, Quarry Proprietors and Stone Merchants, Bath.



Lists of Prices at the Quarries and Depôts, also Cost of Transit to all parts of the Kingdom, forwarded on application to BATH FREESTONE WORKS, BOX, NEAR CHIPPENHAM, WILTS.

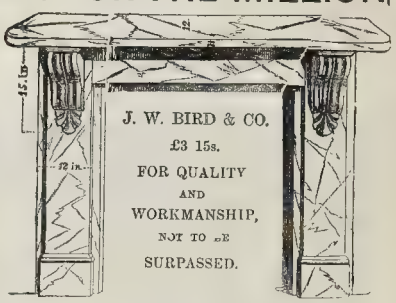
BATH STONE OF BEST QUALITY.

RANDELL & SAUNDERS, Quarrymen and Stone Merchants, Bath.

List of Prices at the Quarries and Depôts, also Cost for Transit to any part of the United Kingdom, furnished on application to BATH STONE OFFICE, CORSHAM, WILTS.

MARBLE & STONE CHIMNEY-PIECES FOR THE MILLION.

PRICE LIST ON APPLICATION.



A Stock of 500 *always to choose from at*

J. W. BIRD & CO.'S,
THE EMPORIUM,
145 & 143½, EUSTON ROAD,
N.W.

A Marble Box Chimney, with 8-inch piers, as Illustrated, for 28s. and fitted to any opening up to 3 feet square.

STONE DITTO, WITH BEAUTIFUL MOULDED CAPS, FOR SEVEN SHILLINGS.

Monuments and Tablets in great variety, equally low in price.
Masons' Work of all kinds contracted for and executed with despatch, in Town or Country.
A VACANCY FOR AN OUT-DOOR APPRENTICE.

THOMAS MILLINGTON,

GLASS MERCHANT,

87, BISHOPSGATE STREET WITHOUT, LONDON, E.C.

Reduced Tariff for Sheet Glass.

The Agricultural Hall, Islington, containing an Acre of Glass, was supplied by me. Mr. Rivers, and the leading men in the Horticultural profession, as well as the Nobility, Gentry, and Merchants, have favoured me with orders for home use and for exportation.

CONTRACTORS FOR ROOFING THE GREAT EXHIBITION BUILDING OF 1862.

By Her Majesty's Royal Letters Patent.

F. McNEILL & CO. of LAMB'S BUILDINGS, BUNHILL ROW, LONDON,
Manufacturers and ONLY Patentees of
THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.
Patronised by
HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSIONERS OF CUSTOMS,
HONOURABLE EAST INDIA COMPANY,
HER MAJESTY'S WAR DEPARTMENT,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK.

And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland, at whose great national shows it has been exhibited, and OBTAINED THE PRIZE, for being the best and cheapest article for roofing; also used for under slates at the Royal Agricultural Society's House in Hanover Square. Its advantages are lightness, warmth, durability, and economy. It is impervious to rain, snow, and frost, and a non-conductor of heat and sound. The Felt can be cut to any length, by 32 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its use, and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen, and Gentlemen, who have extensively used it, sent free to any part of the town or country. DRY HAIR FELT, for covering Boilers, &c. is also manufactured, by which a saving of about 25 per cent. in fuel is effected. The TRADE are respectfully enjoined to send their orders DIRECT to the FACTORY, as the surest means of being supplied with a good article, and in lengths best suited to their roofs. The original works where the above roofs are made are F. McNEILL & CO.'S Manufactories, LAMB'S BUILDINGS, BUNHILL ROW. Roofs covered with McNEILL'S FELT to be seen at the CAMPS of ALDERSHOTT, CURRAGH, SHORNCLIFFE, and COLCHESTER, upwards of Three Millions of Feet; also the GREAT EXHIBITION BUILDING of 1862, of nearly One Million Feet. A Liberal Discount allowed to the Trade.

PRACTICAL MECHANICS' JOURNAL for SEPTEMBER. Part 186. Price 1s. Illustrated with a highly finished Steel Engraving, folio size, of Messrs. Christopher & Hawksworth's Gun Barrel Making Machinery, and forty woodcuts.

Original Articles on Ventilation, by General Morin.
New Forging Machines.
Drilling, Drawing, and Rolling Metals.
Kirk's Refrigerating Apparatus.
Steam Fire Engines.
Gore's Gas Furnace.
Pile Cutting by Machinery.
Cranston's Horticultural Buildings.

RECENT PATENTS:—Luddy, Casks; Stewart & Robinson, Injectors; Bottomley, Yarns; Taylor, Carding.

LAW REPORTS OF PATENT CASES:—Rothwell, Propellers; Trade Marks; Hotten, Copyright; Taylor, Linting Machines.

Name Memoranda, Monthly Notes, Prices Current, Lists of Patents and Designs registered, &c. &c.

London: LONGMANS, 39, Paternoster-row;
Editor's Offices (Offices for Patents), 47, Lincoln's-Inn-fields.

Just ready, demy 8vo. 800 pp. and upwards of One Thousand Illustrations, half-bound, price 10s 6d.

THE SELF-AID CYCLOPEDIA for SELF-TAUGHT STUDENTS. Comprising Figure and Perspective Drawing; Architectural, Mechanical, and Engineering Drawing; Church and Cottage Architecture; Ornamental Drawing and Design; Mechanics and Mechanism; The Steam Engine; &c. By ROBERT SCOTT BURN, Author of "Implements and Machinery," "Lesson of My Farm," &c. &c.

*** A most useful work for Mechanics, Engineers, Architects, Surveyors, Builders, Designers, and others.

London: WARD & LOCK, 158, Fleet-street.

THE ART-JOURNAL for SEPTEMBER (price 2s. 6d.) contains, Three Line Engravings—viz. "A Hawking Party," by C. Cousen, after F. Taylor, president of the Water-Colour Society; "The Decline of Carthage," by J. B. Allen, after J. M. W. Turner, R.A.; and "The Lady of the Lake," by G. Stodart, from the statue by E. E. Spence. The literary contributions include—"Plymouth China," by Llewellynn Jewitt, illustrated; "British Artists: Edward Armitage," by James Dafforne, illustrated; "History of Caricature and of Grotesque in Art" by Thomas Wright, illustrated; "A Bubble from a New Brunnen," by Mrs. S. C. Hall; "Art, in its Influence on Art-Manufacture," by J. E. Atkinson; "The Architectural Museum;" "The Report on the Royal Academy;" "National Portrait Gallery," Biographical Sketch of W. Mulready, R.A. &c. &c. The present number also contains the concluding portion of the illustrated Catalogue of the International Exhibition, which contains specimens of French Bronzes, Porcelain, Lace, and Inlaid Marble-work; also Viennese Bookbinding, and English Mediæval Metal-work, Porcelain, Cabinet work, Plate, &c. &c.

N.B. The Numbers for October and November will contain a History of the Exhibition, and Engravings of the sculpture therein exhibited.

London: JAMES S. VIRTUE, 26, Ivy-lane.

WOOD PAVING.
MESSRS. THORN & CO.
CONTRACT to MANUFACTURE and LAY WOOD PAVING, of every description. It is particularly adapted for RAILWAY STATIONS, ENGINES, SHOPS, IRON BRIDGES, &c.
THORN & CO. STEAM SAW-MILLS, CREMORNE WHARF, CHELSEA, and GROSVENOR ROAD, PIMLICO.
Asphalte for Railway Arches and Iron Bridges.

ACCIDENTS
By ROAD, RIVER, or RAILWAY;
Accidents in the Field, the Streets, or at Home,
May be PROVIDED AGAINST by taking a POLICY of the RAILWAY PASSENGERS' ASSURANCE COMPANY,
64, CORNHILL, LONDON.
£140,000 have been already PAID as COMPENSATION for Accidents of all kinds.
In Seventy-five Fatal Cases, and 6,980 Cases of Personal Injury.
Rates and further Particulars may be obtained at the Railway Stations, of the Local Agents, or of the
HEAD OFFICE, 64, CORNHILL, LONDON, E.C.
WILLIAM J. VIAN, Secretary.
Railway Passengers' Assurance Company, empowered by Special Act of Parliament, 1849.

MONEY.—IMMEDIATE CASH ADVANCES MADE ON
FREEHOLD, LEASEHOLD, and COPYHOLD PROPERTY
TIMBER, WINE, and SPIRIT WARRANTS.
BANKRUPTS' and INSOLVENTS' CASES CONDUCTED.
Balance-sheets Prepared, and Meetings of Creditors Convened
Mr. RICHARD CROSSLEY, ACCOUNTANT and BUSINESS AGENT,
17, Moorgate-street, Bank, London.

NO INQUIRY OR SURVEYOR'S FEES.

MONEY.—To BUILDERS and OTHERS.
THE REAL and PERSONAL ADVANCE COMPANY (Limited) makes Advances on Houses, either finished or in CARCASE, in sums to be agreed on as the building progresses. Also on PERSONAL Security, Bills of Sale, &c.—Apply at 2, Tavistock-street, Covent Garden, W.C. from Nine to Six daily, Saturday Nine to Four. Forms gratis. F. J. HARVEY, Secretary.

MONEY on FREEHOLD and LEASEHOLD PROPERTY, by the
MUTUAL LOAN FUND ASSOCIATION
(Incorporated by Act of Parliament, 1850), 14, RUSSELL STREET, Covent Garden, W.C. Advances from 100l. to 1,000l. upon Freehold and Leasehold Property for any term up to ten years. Mortgages redeemed, and the advance can be repaid by easy instalments. Facilities afforded to tenants to purchase the houses they occupy, and the repayment of the advance taken as rent. Greater advantages are offered to borrowers than in building societies, there being no shares to subscribe for, or competition for an advance, and no deduction from the loan. No preliminary fees. Prospectus and forms of proposal sent on receipt of a directed stamped envelope.
EDWARD HARPER, Secretary.

BRYCESON'S ORGAN FACTORY,
BROOK STREET, EUSTON ROAD, LONDON, N.W. Established 1796.—Apply for PRICED CATALOGUE of St. Cecilia, Scudamore, and other Organs, usually in Stock. Also as to the Tuning, &c of Organs in all parts of the country. Church Organs of any size built, enlarged, or revoiced, as well as removed and WAREHOUSED DURING RESTORATIONS. PRIZE MEDAL, 1851.

The Builder.

VOL. XXI.—No. 1073.

Legislative Measures for the Prevention of Smoke-Nuisance.

CONSIDERABLE exertions have been made during the re-edification and improvement of the city of Hamburgh, to secure good arrangement and construction of the buildings. Of these efforts we should desire to know much more than the fact now mentioned. We know, however, that English engineering skill and architectural taste have participated in them. A commission has been appointed by the senate, to frame a Buildings' Act, and has nearly completed its labours. At its head is Mr. George Stammann, architect. This commission is now desirous of knowing what has been done in London with respect to the consumption of smoke, and we have been addressed by Mr. C. C. Nelson, with a view to the communication to Hamburgh, of any suggestions calculated to assist the object, whether they would relate to measures legislatively restrictional, or others connected with the formation and construction of fireplaces and flues.

We are sorry to say that what has been actually accomplished in London, amounts to very little. An act, indeed, has been during some years in force; and from time to time, a paragraph in the police intelligence of the newspapers may be noticed, saying that So-and-So, of some one of the manufacturing districts of London, had been summoned by Mr. Sandison, the Government inspecting engineer, for having a furnace not so constructed as to consume its own smoke.

In the last reported case, two or three days ago, before Mr. Traill at Greenwich, Mr. Sandison deposed to having visited the defendant's premises in October of last year; at which period, the defendant was allowed time to make such alterations to his furnace as would comply with the act of Parliament. However, the report proceeds to say:—In June of the present year a complaint was made of a nuisance arising from smoke from the same engine, and on visiting defendant's premises on the 22nd of July, he, Mr. Sandison, found the engine in the same state as in October last; but it was not in operation on that day. Police-constable 85 M, said that on the 21st of June he watched the engine on defendant's premises; and in a period of an hour and a half, dense black smoke was emitted for nineteen minutes. The defendant said, the engine (a portable one) could be removed to any part of the premises, and was not often used. He had, however, determined to do away with it entirely, and he therefore hoped the penalty would not be enforced against him. Mr. Traill remarked that the expense incurred by the Government in such prosecutions, was greater than the penalty imposed by the act of Parliament under which the proceedings were taken. He should therefore impose the full penalty for a first offence of 5*l.*, and 2s. costs.

This is a specimen of the general course of the proceedings in these cases; and the state of the London atmosphere, much as it varies with the weather, at all times testifies to the insignificant operation of the legislative restrictions, to the frequent absence of contrivances for smoke-consumption in furnaces and kilns, and to the general absence in private houses—whence, as it has been said, the chief pollution is occasioned—both of the control, and of every kind of smoke-consuming grate. In our notices of the Exhibition of last year, we paid particular attention to the smoke-consuming grates, of which there were several; but not one of the number can be said to have got into sufficient use, for full evidence to be obtainable of its claims to general recommendation.

Perhaps the most offensive chimney of all in London, is that which rises from behind the centre of the river front of that building which is in the occupation of the Legislature itself. Any day during the session of Parliament, volumes of the unconsumed carbon may be seen pouring forth, and contributing an important *quota* to the general dirtiness of the atmosphere between Westminster and Vauxhall, as well as helping to blacken the beautiful octagon tower and spirelet of the centre of the building, and to clog up all the interstices of its rich ornamentation.

But, regarding London generally, any abatement of the evil is inappreciable. On many days of the Exhibition year, looking from one end of Pall-mall, along the street, at about the dinner-hour, the smoke was to be seen descending between the houses, hiding almost entirely any view of specimens of architecture which have been deemed creditable to us, and in fact offering to the eyes of any foreigner, a picture of what has to be endured in this land of liberty, such as could not but repel him from thinking of ever taking up his residence with us. Once able to contrast in the mind such appearances as we have instanced; or the constant obscurity, with the lightness and clearness of Paris, or even of Rouen,—despite the chimneys of the latter, which seem to justify, by their number and size, the title "Manchester of France,"—and we require nothing else to explain the difference in the mental constitution of the English and French, and to show why the latter people possess a readiness, at least, in art-work,—a fertility and fancy,—that the English people, whatever be their attributes otherwise, certainly have not.

We are asked to explain how the different smoke-consuming contrivances are constructed, and which of them are considered the most effective and durable; and whether there are legal enactments prescribing the method to be employed.

On the last-named point, we need hardly say, that the English legislation, as our correspondent perceives, allows free choice of whatever form of apparatus may answer the purpose. Contrivances found suitable in one case, have not answered in another where the conditions have appeared to be similar; until, at last, it has come to be generally felt, that as much depended upon the manner of "firing," that is, of the mere throwing in the fuel, as on anything else. In Lancashire it is pretty well understood by those who pride themselves on not adding to the general pollution there, that large resources for production of steam, as in the possession of a sufficient number of boilers, are necessary for the avoidance of the evil in the case of chimneys to the furnaces of steam-boilers. However, the advantages of the two-flued boiler, for alternate firing, are understood. The chimneys of fireplaces of the description just mentioned, however, we apprehend, would be chargeable but slightly with the evil of the general atmosphere of London, in comparison with smoke-vomitories of other descriptions. We can merely suggest that the Government inspection must have conduced to the acquirement of information that is hardly to be secured through another medium. The obtained results, however, we say, of the operation of the Act, are insignificant; and the condition, every way considering the question, of London, is most unsatisfactory. Still, some *data* as to the working of particular contrivances, and forms of fireplaces and flues, are likely to have been arrived at, beyond what are known to us. With the prospect of obtaining these, application should be made by the Hamburgh commission or senate, to the British Government; though any information that our inspectors may have acquired, should be diffused as widely as possible. We may merely note as to the furnaces of steam-boilers, that the steam-jet contrivance applied to those of the machinery department of the Exhibition, appeared to be most effectual. The smoke-nuisance in our towns cannot continue to be perpetrated without loss, not only of architecture, and the effect of buildings,—passing over the loss of fuel, and the cost of all cleansing processes,—but loss, or clogging-up and obscuration, of some of those agencies, our perceptions and emotions, by which it was divinely intended to guide the course of humanity to the noblest ends.

THE COSTLINESS OF ARBITRATIONS.

THE LIVERPOOL CASE.

THE example to which we gave some attention in our last number, of defects in the working of one of the present methods of settling questions of the value of property required for public works, has of course excited notice in many quarters. With the general subject of the evidence and the judicial functions of professional men when called upon to act, it should continue to be discussed, to the end that improvement upon the present unsatisfactory posture of affairs be arrived at. We append a communication that we have received from Nottingham, on the Liverpool case. The writer, claiming to have had experience as representing, at various times, owners of property, as well as promoters of improvements, differs from our correspondent from whose letter we gave an extract, and treats such cases as that which we referred to, as exceptional, and rather the result of bad management by public authorities than as involving a question of principle. He says:—

"The Liverpool arbitration case referred to in your leader of the 22nd, is, no doubt, important as showing to what extremes these cases are sometimes carried: great reflection seems to be cast upon the claimants under this arbitration, for putting the corporation to an expense of 1,800*l.* and upwards, before a settlement of the claim could be arrived at; and the circumstances are made the ground for raising objections against arbitrations in general as too expensive. But surely this ground is wholly untenable?

The principle of determining disputes by arbitration is one which is held in veneration and respect in this country; and so long as we have trial by jury, the other mode of adjustment must continue. Arbitrations are, no doubt, often made expensive; but this is caused by the promoters, the parties themselves, on the other side, rather than by the claimants of value. In the case of corporate towns, members of town councils dressed in a little brief authority, have too frequently friends to serve, or foes to serve off; or they wish to do what they call a cheap thing for the town, and endeavour to browbeat the individuals who are about being dealt with, and to depreciate their property by offering a sum wholly insignificant, which is generally increased one-third, one-half, or sometimes double, by the arbitrators or umpire. This is distinctly proved by the great increase of arbitration; for, had the claimants not been so successful in obtaining considerably more than promoters offered, they would not run the risk of paying the *expenses* incurred, which would be the case if the sum awarded was less than that offered. Alderman Holme fixes an arbitrary sum; and because this is not accepted, he complains of the corporation being driven to an expensive reference, and saddled with costs amounting to 1,800*l.* Had a more liberal sum been offered, it is very probable that the corporation would have saved, not only these expenses, but also a portion of the amount awarded. Where a claimant is driven by a powerful corporate body, or a wealthy railway or other company, into an arbitration, he knows too well that all the influence, wealth, and other resources at hand will be brought to bear against his claim; and he is driven to great and unnecessary expense, in order to oppose this strong tide of power and wealth that is set against him. It must not be lost sight of, too, that claimants have their own individual interests to protect; and their cases are often cases of life and death to them. Pro-

moters are representatives often of public bodies, who are said to possess no souls; and did those who act for them endeavour to make the case more their own, these extreme instances of costly arbitration would not so often arise between individuals. They are seldom heard of; and it is generally only where irresponsible power, and great wealth, are brought to bear, that they are made to form the exceptions to thousands of cases which are taking place weekly throughout the kingdom. Your correspondent's remarks on 'arbitrators with unlimited power to call witnesses, with solicitors, with barristers, and with contingent costs and charges,' and on the system as 'a blundering and most extravagant mode of settling value,' must surely have been written, either in great anger, or in great haste, or under strong partisan feeling: otherwise he would not have so unreasonably denounced a system so consonant with English feelings, and which has worked so well, except in those few cases where power has used all its influence to oppress, and swamp, the humble individual. To be enabled in this country to stand up against this power is, to my mind, a noble thing; and so long as power and wealth continue to be oppressive, so long may the majesty of our law support the humblest claimant in protecting rights and property that are as dear to him as are the coronet and broad acres to an earl; and, let those who are in the wrong, pay the cost, whatever that may be."

We do not think, however, that the subject can be allowed to rest as here placed. On the one hand, works desirable for the common good, such as have been delayed for a succession of years, keeping up a rate of mortality that has been clearly shown to be preventible, or affecting the convenience and comfort of the general public, through the caprice or avarice of mere units of the people, must not be allowed to continue indefinitely retarded; on the other hand, such power as that which has been obtained by the chief railway companies, must be checked,—opposed as it has often shown itself to be, not merely to the legitimate interests of individuals, but in towns, to the very sanitary amelioration which, as in the case of the metropolis, should be served by the means of communication between town and country. We apprehend that arbitrations involving considerable cost, even as compared with proceedings in courts of law, are by no means so rare as our correspondent would seem to believe. They are sometimes said to be made costly by one of the parties to the dispute, in order that the award may not be taken up; and cases are constantly quoted in which it might have been cheaper to have proceeded in a court of law.

Something ought to be obtainable in the way of information, useful towards correction of the present evils of the system, from the great experience recently, in Paris, of the working of the law of expropriation "*pour cause d'utilité publique*." But whatever the cost to parties appearing before the juries in Paris, the differences between the amounts offered and demanded are as great as what we are accustomed to.

We fear there is some want of a principle of honour, not to speak of the higher rectitude, which would prevent those who appear as witnesses and judges, conducting themselves as advocates. Instances are pointed to and applauded, of those whose profession is the law, refusing to support positions, the justice of which they were not convinced of. Surely there should be equal hesitation on the part of those who are morally bound to say what they believe to be in accordance with right and justice, and to say nothing unless after having had the means of arriving at a real conviction.

COUNTRY-SEATS AND ARCHITECTURE IN AMERICA.*

Few people have given a thought to the possibility that the American war would affect architectural or literary wares; but it certainly has done so, to some extent, both in the Old World and in the New. Our Trans-atlantic cousins were large purchasers of English illustrated works: the sale of these has materially diminished. Indeed, so considerable has been the decrease in the issue of illustrated works since the outbreak of hostilities, that many draughtsmen and engravers on wood have turned their attention to other branches of the arts: the demand for these works has dwindled down to a tenth of its former extent. Across the Atlantic, the war has affected the publication of literary and architectural works in other ways: publishers have feared to embark in any enterprise, and staffs of assistants have resigned their avocations and entered the army. The preface of the American work before us states that it was fully prepared for the press some two years since, and was about to be put in the hands of the publishers, when the "War for the Union" broke out, and seemed for a time to paralyze any new undertaking; and that the author intended to have added a treatise upon landscape-gardening, illustrated with maps, executed under the auspices of Mr. George E. Waring; but that gentleman having accepted a commission in the army, he was obliged to abandon one part of his scheme. This is a new phase of the effects of the American war.

Business, however, becoming based upon a war-footing, and fortunes appearing to be made even faster than in times of peace, Mr. Holly has recently issued his work. It consists of thirty-four designs for cottages, villas, mansions, country churches, city buildings, railway stations, &c. It is prefixed with "some account of the history of architecture," from the *cabins* and huts of provincial builders to the late Perpendicular and Italian Renaissance of the fifteenth and sixteenth centuries—to European readers the least interesting part of the book. The designs embody reproductions, more or less presentable, from all the styles and periods. Our author endeavours to impress upon his readers, various practical matters, the advantage of frequent communication with the architect, the danger of altering a design without consultation, the advantage of building with a view to future enlargement, and of the possibility of clothing utility with beauty. From this epitome it will be seen that the work, although dedicated to the American Institute of Architects, is written expressly for the consideration of fortunate American citizens about to build; to whom, by the way, some hundred and fifty English names of country seats, not in use in America, are suggested as a stock whence to make a selection. Several of the designs are representations of buildings erected or improved by the author for individuals whose names and addresses are given. There are some curious contrivances, or "agreeable surprises," recommended, that are also not intended for the professional reader. Thus, in a dining-room, the window at the end opposite the entrance-door is oval-formed, and elevated above the rest, to leave a place below it for a sideboard. The author suggests that the upper portion of the sideboard should be so constructed as to form a frame for this window, "so that the window will appear to be a part of the sideboard, and that a part of the room." For a drawing-room, there is a suggestion that there should be a window over the fire-place, the frame of which should be treated to resemble that of a looking-glass as nearly as possible. As the sun might occasionally be an inconvenience to persons sitting reading at the fire, it is necessary that this "agreeable surprise" should be furnished with a sliding shutter, on the inside of which there should be painted a fine landscape. Thus, this chamber would be furnished with two pictures, one of which would consist of real scenery, the other of an artificial landscape. In another design, the hall, library, and drawing-room, designed in different styles of architecture, are so arranged that they may be thrown into one apartment at pleasure, when the vermillion, cobalt, and gold of the drawing-room decorations are deemed likely to form a startling contrast to the natural woods used in the hall and library; that is to say, the rich carpets, gilded mirrors, and rosewood furniture of the drawing-room, are thought calculated to present another "agreeable surprise" to those approaching it through the oak and walnut floored and furnished hall and library. A square study, built in Newhaven, is rendered octagonal by placing the fireplace diagonally in one corner of the room, and fitting the other three corners with diagonal bookcases. The flue from the fireplace recedes above the opening, giving space for a cabinet over the mantelpiece to balance the bookcases, all of which ascend to the ceiling, and terminate in an oaken cornice, which runs round the room. A drawing-room constructed octagonally in another house has niches for statues in what the author calls "the four corners." The dining-room in this same house is also octagonal, as is the hall. Six doors open out of the latter into as many apartments. In turning over the pages for himself, the reader would find many other contrivances as *surprising*; some of which, however, are not devoid of originality, or of propriety, under certain circumstances. Indeed, treatment of a similar character is needed in planning, in English architecture.

American architecture has these disadvantages: it has no antiquity, or traditions, and it has no nationality; for, it does not appear that the deserted cities have furnished any type, either of construction or of ornamentation, to Northern architects. American archæology is only lately born. On the other hand, Transatlantic architecture has the advantages of all the abundance of building materials of a new country, and of a climate, that calls for features in its buildings capable of much new and effective treatment. Upon this basis, we contend, there should be developed a style pre-eminently American. But this creation is not even at hand: American buildings, so far, are but bad imitations of those of Greece, Rome, Italy, and England. Verandahs are adopted to all alike, regardless of traditional fitness. These shade-yielding contrivances form an essential of American rural architecture; and their effect should be well considered.

The most unfortunate of imitations is that of the castellated style. Mr. Holly's American feudal villas are the most unhappy of his conceptions. Could our readers resist a smile at a turreted castle with an open porch to the keep, and cross-bow slits as long as its bay windows? With the exception of some world-renowned names, our cousins know nothing of archæology. One of their most popular writers, describing his visit to Stratford-upon-Avon, states that Shakspeare lies buried in a sort of chapel opening out of the church: this is the impression the chancel left upon his mind. In the same way, American architects cannot devote sufficient time to study our castellated architecture sufficiently to be able to reproduce it; whilst they should not reproduce could they afford the time. To pile up the agony of the anachronism, Mr. Holly surrounds one side of his castle with a verandah. The spacious porch admits the supposed foe into a vestibule; and thence he may take his choice of ransacking a coat-closet on his right hand, or proceed into a hall. Having thus accomplished an entrance, he has the four principal chambers on the ground-floor in his power: not an inmate could escape him. They have but one exit, and that is into the hall of which he has taken possession. Not only the reality and the practicability, but the poetry and the possibility of feudal architecture, are lost in these travesties. Nor is what our author calls "the Tudor style—of an ecclesiastical character," more capable of transportation and adaptation in the hands of the unitiated. Thus discourses he of design No. 27—an overpowering porch connecting a tower on one hand with a staircase turret, pierced with eleven uniform windows at regular intervals, and gable-tipped chambers on the other:—"The main entrance of this design has rather an ecclesiastical character. The pointed roof and window of the second story are of the style of the thirteenth century, while the flat arch of the carriage porch and the buttresses which strengthen the piers are of the fifteenth. The battlemented towers and parapets which here and there show themselves, partake strongly of the castellated feeling; and the bay windows, chimneys, &c., may be regarded as *new features, peculiar to the Tudor*,"—peculiar to the American Tudor, we presume. One-half of this building is likewise encompassed with a verandah. The quaint irregularity of the style is quite lost sight of: all is hard, stiff, formal, and ill-proportioned. Over the front four-centred open archway in the porch, there is a three-light, cusped-headed window under a pointed moulding, suggesting that the upper story was built about two centuries before its substructure. This is the largest window in the house. In the gable end over it, is a trefoliated opening, and on the gable end a foliated finial. The side windows of the porch are of two lights under a square label: these are more in accordance with those of the rest of the fabric. The arrangement of the single cusped lights in the oblong panels running zig-zag up the tower, is monotonous in the extreme. The plan of this design shows a bedroom on the ground-floor. As the drawing-room, dining-room, library, cabinet, coat-closet, furnished the meed of accommodation generally required, did our architect make up his number of bedrooms by counting this another instead of a morning-room? A bedroom over the porch gives us its dimensions—15 feet by 20 feet—an ill-proportioned size. A much more successful design is No. 15, which might be a reproduction of a charming old English parsonage-house, stone for stone. It is given as a specimen of the progress of American rural archi-

* "Holly's Country Seats: containing lithographic Designs for Cotrages, Villas, Mansions, &c., with their accompanying Out buildings, also Country Churches, City Buildings, Railway Stations, &c., &c. By Henry Hudson Holly, architect, New York. D. Appleton & Company, 1863." Small 4to, pp. xiv. & 171; 34 lithographs.

tecture since its days of Puritan plainness. The dwellings of the Puritans who colonized New England, and of the Dutch farmers who cultivated the banks of the Hudson, should be full of interest for their descendants, and reverently preserved; but it does not appear that this is the case save in exceptional instances. In "the good old colony times" the first settlers and builders of "plantation houses" in Maryland and Virginia imported the bricks with which they constructed their homes. Mr. Holly confesses that there is a truth and solidity about the mansions of the "old governors" which it would be vain to look for in the architecture of the present day, and that they fairly express the solid energy, determination, and great-heartedness of the founders of the new empire in the wilderness. He considers that the decadence in architectural taste is to be attributed to the too great and too rapid prosperity of the next generations, whose feverish desire to express their riches in their habitations, led to the adoption of domesticated Greek temples, built of wood, painted white, and blocked in courses to imitate stone, as residences. The true refinement of the colonial aristocracy, the hearty hospitality of the gentleman of the old school, seem to have been overwhelmed by the pretentious show and glitter of a society whose "new-crowned stamp of honour was scarce current," and which naturally in architecture developed a fever for base imitation which it is one of "the special objects of this work to reprehend and criticize." These sentiments, by the way, excellent in themselves, are strangely at variance with the suggestions of verandahed shamcastles as homes for modern Americans. We might ask, why not take the brick and stone testimonies of the vigour, energy, truth, self-reliance, and self-resources of the first colonists as models that only require adaptation to modern requirements?

Among the building materials mentioned, there are many that are new to us; and several we should hesitate to adopt in our country seats. A villa of Italian design, containing twenty-eight chambers, built in Bethel, Connecticut, is made of wood; the timbers of pine; the sills of chestnut. The frame is filled in with brick, and sheathed on the outside with rough hemlock boards, before the clap boards are put on. A thirty-chambered house at Danbury, Connecticut, is built of unbaked brick made of concrete, which is "somewhat similar to, though much more durable than that of the ordinary gravel or rough-cast walls." Mr. Holly recommends this material for districts where stone is difficult to be obtained, and brick and lumber expensive to transport, as it can be manufactured *on the spot from the loose gravel that comes from the excavations of the cellar*, provided it is sharp and free from loam and clay. The gravel thus obtained is mixed with a certain proportion of lime or cement, and placed in moulds, where it is subjected to pressure. These home-made bricks are placed on boards till they become perfectly hard and dry. They are 10 inches long by 5 inches wide, and 4 inches deep, and are made with a hollow space in the centre, for the purpose of preventing damp from passing through, the hollows of one row being placed next the solid part of those behind. They are of a neutral tint, and require no further treatment than an occasional coat of boiled oil for the better prevention of damp percolations. If not made correctly in the exact proportions we are not to expect the same results. In a house designed with particular reference to durability and facilities for warming and ventilating, the walls are specified to be built of stone; the partitions where due support is obtained, of brick; elsewhere of galvanized lath; the window-frames of iron, and all the floors of cement, with a strip at the sides for securing carpets; the roof of slate; the stairs and "inside trimmings" of *composition*. These are, certainly, difficult materials to blend in one harmonious whole. The mystery of good ventilation and successful heating is considered solved by the use of a large hot-air furnace in the cellar, and a fireplace in every room, to which scheme a material assistance is furnished by the burning of a small fire in each grate. Another mode adopted to prevent damp is "brick-furring." This is an outside wall of stone, 18 inches thick, a hollow space of 3 inches, and then a brick wall of 4 inches. No lathing is required, as the plastering can be placed on the bricks, as it can also in the case of the home-made bricks above mentioned. The hollow space between the stonework and the bricks, extending from the basement to the roof rafters, acts as a ventilating flue, and is thought to keep even the attics cool in summer. The house at New Haven before alluded to, is built of bricks, with hollow walls stuccoed on the outside, and coloured a neutral tint. The roof is covered with slate, "with the exception of a small flat or deck on top, which is covered with *tin*, and used for the purpose of collecting water for the tank in the attic." The plumbing for the water supply being on the north side of the house, the pipes were packed in sawdust, and placed in contact with the kitchen chimney to counteract the effects of frost. Trying to get over the incongruities attendant upon building a large house on a small estate, our author says that if the residents were always indoors, the windows might be made of *magnifying glass*; in the absence of this imprisonment, he recommends the adoption of our English sunken, or ha-ha fences. There is a new scheme for the construction of ice-houses, involving a different mode of proceeding from that devised by Cobbett. That practical authority, speaking from his American experience, insisted that ice-houses should be built as dry as possible, in the open sun and air, upon a site from which the melted ice would naturally fall away in every direction, asserting that moisture was the greatest enemy that attacked the contents of these structures. He recommended a circular form, and posts, plates, rafters, laths, and straw for materials. When built, and roofed, and thatched, the enclosed space is to be covered with short logs, placed at the distance of a foot apart; upon these are to be laid crossways, and then crossways again, poles about 6 inches apart; and upon these rods, as thick as your finger, placed an inch apart. Over this superstructure a layer of clean dry twigs, or of clean strong heath, should be placed to form the bed upon which the ice is to be packed, exactly 17 inches above the level of the ground. The new plan, as followed by Mr. Holly, from the suggestions of Mr. B. S. Carpenter, gives a foundation 2 feet below ground, and consists of the use of two hollow walls with a space between them for confined air. In the experience detailed, it is stated that it was only in the sunken portion of the house that the ice wasted, thus verifying Cobbett's assertions; but this waste was so unimportant that the bulk of ice, about 8 feet by 10 feet square, was used freely for a large family, and dairy of thirty-five cows, after which supply there was still plenty for neighbours. At the lower side of the plates used, is a ceiling, upon which a layer of spent tan is laid, and beneath which runs a ventilator, with a hole of one-and-a-half inch bore, up through the roof, finished with an ornamental cap.

Most of the drawing-rooms depicted in this volume are furnished with small cabinets, which can at will be disconnected by drapery or other contrivance from the main chamber, and thus converted into a reading, music, or private reception room. Most of the dining-rooms are connected with the kitchen by a butler's pantry. Nearly every hall is furnished with a coat-closet. A great many square and oblong sitting-rooms are shown, with a three-cornered closet cut off each angle, which leaves the chamber octagonal. These arrangements are generalities. We quote another distribution of house space. "As we approach the main entrance, we pass a wide verandah, which communicates with the principal rooms of the ground floor. The main hall is spacious, and well lighted, and being unobstructed by the stairs, might serve the purpose of a sitting-room. The drawing-rooms are separated by sliding doors, so that one might be used as a library. The dining-room has a niche for a sideboard, and a bay-window, surrounded outside by a balcony. This room communicates with the kitchen-offices by a private entry, which contains a stairway, dresser, butler's sink, &c., and has an exit front and rear." There is no doubt but that the service of a dinner can be performed much more easily and correctly, with an entrance for the guests different from that used for the dishes; and we are glad that our American cousins recognise the convenience and propriety of the arrangement. The kitchen-chimney of the house in question, is built up on the outside as a pleasing feature, for the double purpose of giving more space in the chambers above the kitchen, and of excluding its heat in the summer. The mason's and carpenter's estimates for this house are given as amounting to 10,500 dollars. The castellated country seat described, is estimated to cost 9,500 for the mason's and carpenter's works. The estimates from the same trades only, for a forty-chambered house come to 45,000 dollars. A six-chambered cottage, designed as a lodge, and considered equally suitable for a small farm-house, is estimated at 800 or 1,000 dollars. The estimates of every design are added to the explanation of it: we have quoted some only, to give our readers an idea of the value of Transatlantic house-property.

In connexion with a design for a small country church, which, with 350 sittings in it, was built at Wilton, Conn., for 4,500 dollars, the manner of the building of ecclesiastical edifices in this go-ahead country is thus ruthlessly laid bare:—

"It stands in a cramped and unattractive spot, given probably by some worldly-minded parishioner, who, as he gave, estimated the sure rise in his surrounding land. A lumber merchant, a carpenter, and a 'solid man,' constitute the building committee. The material selected is wood, of course, that it may be furnished by the lumber merchant, and the carpenter make a good profit of the contract; while the plan adopted is that most pleasing to our 'solid man,' from whom a liberal donation is expected. This is not an overdrawn picture, but only too truly indicates the manner in which many of our churches are built. Frequently, stone designs are built in wood, sanded and blocked off most cunningly. The interior walls of plaster must also represent stone, and the really respectable furniture of wood must be painted in imitation of some more expensive material."

This picture of an American village church is not very picturesque. The cottages and small farm-houses match in ugliness: pinched, formal, graceless places, painted bright red or blinding white, with green wooden shutters. American railway stations are described as remorselessly. They are either uninviting and beggarly, or ridiculously and pretentiously absurd. Of the latter kind, the author instances a huge mock Egyptian temple, with the fuel-house imitating the towering Pylon, all built, most unmistakeably, of boards.

The introduction of public parks into America will inaugurate a new season in the progress of Transatlantic architecture. The grand Central Park, New York, cannot fail to be speedily fringed with the mansions of the wealthy. It will afford American architects the same chance that the formation of our Regent's Park did the architects of George IV.'s reign. They will, however, have this advantage over their precursors—they may profit by our experience. It is to be hoped that the opportunity will be seized, appreciated, and improved. With the perception of fitness and beauty we see dawning in the New World, we do not despair of a felicitous result.

Altogether there is a commendable tone of feeling pervading Mr. Holly's volume. It is a picket in the van of a popular Transatlantic recognition of the true principles of architecture, notwithstanding the blemishes we have pointed out. Although our author can perpetrate a design based upon a "base imitation,"—those of feudal structures *par exemple*,—he can see the impropriety of other people reviving frowning battlements and machicolated towers in wood and stucco. Although he transplants Swiss cottages to America, he impresses his readers with the advisability of adapting style to site. To place an Italian villa upon a precipitous site, wildly clad with oaks, cedars, and larches, would be, he urges, as out of the way a proceeding as to adorn a wigwam with the Venus de Milo. He can see the right road; and we have little doubt but that he will follow it eventually.

ENGLISH ENGRAVERS.

NEW MATERIALS FOR THEIR LIVES.

WILLIAM SHARP.

THE graves of our great English engravers, with or without the "forlorn *hic jacet*" of a relative, a grateful executor, or an admiring friend, may be soon enumerated.

William Faithorne, the prince of mezzotinters in his time, was buried in St. Ann's, Blackfriars, in London, in 1691, *without* a monument. John Smith, his full successor in skill and repute, who carried the new art of mezzotinto to the greatest perfection it had attained when Walpole wrote, was buried (1742) *with* a monument in the church of St. Peter, in Northampton.

All that remained of George Vertue was carted away when Wilkins raised his abortion of a National Gallery. A monument in the cloisters of Westminster Abbey marks the grave and assists in preserving the name of George Vertue.

James M'Ardell—a noble "scraper"—has a monument over his grave at Hampstead, in Middlesex.

William Woollett rests beneath a monumental tomb in the old churchyard of St. Pancras, in London: known beyond London topographers and sight-seers by the graver of *Nollekens* Smith.

Simon Francis Ravenet, a pupil of Le Bas, and born at Paris in 1706, was buried in the old churchyard of St. Pancras, in London, on the 6th of April, 1764. *John Hall* (died 1797) was his pupil, and *Abraham Raimbach* (died 1843) was Hall's apprentice. *William Wynne Ryland*, hung at Tyburn 29th of August, 1783, for "shamming Abraham Newland" (forging Bank of England notes), is buried in a nameless grave at

Feltham, in Middlesex. *Sir Robert Strange* (died 1792), as yet unrivalled in making incised copper glow with human flesh, is buried in St. Paul's, Covent Garden, without a monument. (Mr. Holloway, of Bedford-street, Covent Garden, skilled in prints of all ages and countries, for shame, for shame!). *Edward Fisher*, on whom Mr. Cousins has based his style more than any other master, lies—where I have failed in finding.

Of the *three Watsons*—Caroline, James, and Thomas—the grave, in old Marylebone, of Caroline, who died in 1814, is alone remembered.

Francis Vivares, who died in 1780, is buried at Paddington, not far, I have been told, from the "*hic jacet*" (1810) of *Lewis Schiavonetti*, of Stothard's "Canterbury Pilgrimage" and Blair's "Grave."

John Boydell, "engraver in Cheapside," was buried December, 1804, and has a monument to his memory in the church of St. Olave Jewry, in London.

Thomas Bewick (1753—1829), who made dead wood live again, and woodcocks to flutter on box and paper, is buried at Gateshead, in Durham,—*Luke Clennell*, another master over wood (1781—1840), died in a lunatic asylum—his grave unmarked—

"Obscure the place and uninscribed the stone."—*Pope.*

George Clint (1769—1854), to the everlasting disgrace of the Royal Academy only an A.R.A., has a monumental bust at Kensal-green to mark the place of his interment. His own pictures, and his engraving of the Kemble family, will preserve his name when whole batches of "forties" are wholly forgotten. *George Cooke*, a marvellous master in translating the works of Turner, Stanfield, and Prout, and the father (no common praise) of E. W. Cooke, A.R.A. (only, shame to say), died in 1834, at the age of fifty-three, and is buried at Barnes, in Surrey. Of *Dixon*, whose "Duke of Leinster," after Sir Joshua, is "a masterpiece of art, and has never been excelled,"* I have been promised for the columns of the *Builder* a few particulars. A noble "mezzotinter," *Richard Earlom* (1742—1822), of Liber Veritatis and Fruit and Flower Piece Van Huysum fame, lies buried in the lower ground of St. Mary Islington. Nor will *William Finden* (1787—1852), and the heraldic master he was apprenticed to, in April, 1802, James Mitan, be forgotten. Finden's two thousand pounds for Lawrence's "George the Fourth" (the G. R. *easy* print) has not been surpassed, it is said, in the history of prices given by dealers for any single figure work of a like size. The grave of Finden, in Highgate Cemetery, is, I believe, marked with a monument. *James Fittler* (1758-1835) is buried at Chiswick, the spot marked; a Loutherburg battle-piece and the portrait of President West will preserve his name. The grave of my early and kind friend, *Charles Fox*, may be seen in the General Cemetery at Brompton, where a headstone renders in a few words ("a man greatly beloved"†) true justice to his memory. His head of John Burnet after Denning is "illustrious" among English heads. No. 89, Albany-street, Regent's-park, was the residence of *Benjamin P. Gibbons*, one of the best translators Landseer has ever had; witness his "Jack in Office," his "Shepherd's Grave," and his "Shepherd's Chief Mourner." A few lines about *Valentine Green* (1739-1813), author as well as engraver, will not be thought out of place: still less so some account of *Francis Haward* (1759-1797), who lived at No. 29, Marsh-street, Lambeth, and there engraved his famous "Infant Academy," and "Mrs. Siddons as the Tragic Muse," a man who caught Sir Joshua's *texture*, which none of the mezzotinters ever did. But I must get out of this catalogue of promises and introduce *William Sharp* to the readers of the *Builder*: he lies buried at Chiswick, close to the grave of his fellow engraver, James Fittler.

William Sharp was born in Haydon-yard, London, among the Mulcibers in the Minories, on the 29th of January, 1749. How and under whom he acquired the art in which he became so great a master, has not been told us with anything like fulness or satisfaction. No man ever grew great in engraving without some training under a master skilled in the rudiments of the art. "I knew nothing of engraving," I have heard my friend Mr. Burnet observe, "until I was apprenticed to it." Sharp's early lessons were probably derived from the gun-makers in his native Minories. A soldier discovered mezzotinto.

"Sharp's best work," said Burnet aloud in the hearing of Wilkie (who nodded approbation), "is his engraving after Trumbull of the 'Sortie from Gibraltar.' It is immensely fine—glorious. Wilson Lowry ruled the sky. Trumbull was West's pupil, and Trumbull painted it to injure Copley. The picture is reddish and bad; but the engraving by Sharp is indeed glorious." I give my friend's words. I wish I could convey as well his warmth of manner in expressing his sense of its many excellencies.

The following receipt, copied from the original, sold at a sale of autographs many years ago, and now *first* printed, tells the public for the *first time* what Sharp received for his "glorious" engraving:—

"1793—April 2.—Received Two Hundred and Ten Pounds (210*l.*) on account of the Engraving of the 'Sortie of Gibraltar,' after Trumbull, which sum was to be had when the etching was finished. (Signed) WILLIAM SHARP."

This, I believe, was a *fourth* of the sum, 840*l.*, agreed upon. Nor is it large for the size of the plate—30 inches by 20 inches. Mr. Burnet had twelve hundred guineas for his fine engraving of Wilkie's "Waterloo Gazette," and not too large a sum for so noble a *translation* of character and colour into black and white.

A copy of Sharp's "Proposals and Conditions" for the publication of his fine engraving is now before me, and is possibly unique, for I have never seen another copy. Trumbull's picture was exhibited at "Ansell's Auction-room, Spring-gardens," and Sharp's printed conditions are as follow:—

"*Conditions.*

The size of the print will be 30 inches by 20.

The price to subscribers, three guineas; one-half to be paid on subscribing, the remainder when the print shall be delivered; Mr. Sharp having engaged to complete the engraving within four years.

Subscriptions will for the present be received only at the exhibition-room, where a person attends for that purpose; all subscription receipts will be signed by the Two Proprietors, and countersigned by him."

Observe one omission in the condition: engraver's proofs, and proofs before letters—to say nothing of open letter proof, French paper proofs (those ingenious devices of the present day), were never thought of by honest William Sharp and his two proprietors.

Alas! for William Sharp—the copper over which he wrought for four years, day and night, still exists, and impressions, *worn out*, may *still* be had—prints, 1*l.* 11*s.* 6*d.*; proofs, 5*l.* 5*s.*; before letters, 7*l.* 7*s.*, or even a smaller amount.

The effects of "Wm. Sharp, esq., member of the Imperial and Royal Academies of Vienna and Munich, made, by order of the executors, a two-days' sale (Feb. 18 and 19, 1825), under the hammer of the inevitable Christie.

The property, the title-page tells us, consists of "Proofs and early and fine impressions of those plates by which Mr. Sharp established his fame as an engraver of the highest rank, viz., a few of the Doctors of the Church, after Guido; of the portrait of Dr. John Hunter, of which the proofs and fine impressions are become exceedingly rare; St. Cecilia, after Domenichino; Diogenes, the Ecce Homo, and Virgin and Child; historical engravings, portraits of public characters, and other admired popular works of which the late Mr. Sharp was chiefly his own publisher."

Sharp, at the time of his death, had two plates in hand, the Castle Howard Caracci, "The Three Maries," and the Stafford Vandyck of the connoisseur "Earl of Arundel." The latter picture was finished with a reverential and able hand by my friend John Henry Robinson, and is throughout a noble masterpiece of his engraving after Vandyck. No skill could detect where Sharp left off and Robinson began.

This great engraver, this William Sharp, was an enthusiast for human freedom. He engraved, from a liking for the man, Northcote's portrait of Sir Francis Burdett; and bestowed unusual care on an engraving after Stothard's beautiful bistre-drawing of "Boadicea animating the Britons." For many years preceding his death he was a wholesale believer in Joanna Southcott; nay, he extended his belief to Richard Brothers, whose portrait he engraved, with this remarkable inscription beneath it,—"This is the portrait of Richard Brothers, in whom I most firmly believe as a man sent from God,"—a work of art of which Horne Tooke well observed, that, coupled with its extraordinary inscription, "exhibited one of the most eminent proofs of human genius and human weakness ever contained on the same piece of paper."

The face of Sharp has been preserved to us by Lonsdale. The picture was exhibited at the Royal Academy in 1823, and has found a suitable resting-place in the National Portrait Gallery of Great Britain.

I will conclude this account of our great engraver with two little anecdotes.

"I have often seen Sharp," my friend Mr. Burnet, the engraver, has told me, "carrying a proof print to a purchaser in an umbrella contrived to serve two additional duties,—a print-case and a walking-stick."

When I exhibited my picture of "Belshazzar's Feast" (my father-in-law, John Martin, informed me), Sharp called upon me at my house, introduced himself, praised my picture, and asked permission to engrave it. That I was flattered by a request of the kind from so great an artist you will readily imagine; and I so expressed myself. Sharp felt pleased. "My belief," said Sharp, "is, that yours is a divine work—an emanation immediately from the Almighty; and my belief further is, that while I am engaged on so divine a work, I shall never die." When Martin told me this story, he added, with a smile, his eyes twinkling with mischief, "Poor Sharp! a wild enthusiast, but—a masterly engraver."

PETER CUNNINGHAM.

* Wm. Smith, of Lisle-street and Southwick-crescent.
† Dr. Lindley, the celebrated botanist, was the writer.

BOUNDARIES AND DEBATEABLE LANDS.

THIS is a subject of curiosity, respecting which much interesting matter might be written. We will now mention only some facts that may be the means of directing the attention of readers in their various localities, to the neglect which often exists as to the boundary lines of counties, towns, and parishes. We have already referred to the subject, and are glad to find that, so far as the City and metropolitan police are concerned, they work in the debateable lands with somewhat greater harmony than formerly.

When looking lately, with some attention, along the line which in Holborn and Smithfield divides the City from the county, a difference of sanitary care was clearly discernible; and the City certainly had the advantage. Not only had the dust and other household refuse been more carefully and regularly carried away, but the sweeping and cleaning of courts and alleys were better attended to. Still, there is in the present state, much needed to be done, and it would be well if the authorities of cities and parishes were to begin at the extremities instead of neglecting them, and enter into a rivalry with those over the border, and show which could best promote health by attention to those matters that never fail of success. On the days of "beating the bounds" of parishes, it would be useful for persons who have good sanitary knowledge, to accompany the processions which are formed on these occasions: there would be much seen that calls for improvement, and the difference between one side of the line and the other would often be startling.

The thoroughfare which was formerly called Maiden-lane, is one half in Islington, and the other half in St. Pancras parish; and in the wet winter weather, one half of the carriage-way may be seen often swept clean, while the other is almost impassable from neglect. In the City-road, east of King's-cross, at the bottom of Southampton-street, there is a singular example of boundary arrangements. Standing at the bottom of this street, stretching past the Female Penitentiary, there may be noted a difference in the pavement of the carriage-way, part being paved with granite and a long narrow strip macadamised only. The latter part, although it is on the Islington side, belongs to the parish of Clerkenwell. We do not know how this spot of land, entirely surrounded by parts of Islington, should have still continued belonging to the other parish. It may have been that at some former period there were lay-stalls here, or places for the reception of the refuse from Clerkenwell; but the circumstance of finding isolated spots in towns and counties, which are claimed by others, is by no means uncommon. In the county of Northumberland, Norham, in which are the remains of the once famous castle, and which is many miles from the county of Durham, belongs to the last-named district. Newcastle-upon-Tyne is a town and county in itself, and in reality forms no part of the county of Northumberland. The borough has separate courts of assize and other courts of justice. In the town-hall, the Queen's judges sit for the borough, and in the Mote-hall (an ancient name) for the county; and the land on which the county courts stand, although within the boundaries of the town, forms part of the county. Formerly there was an old inn in the Castle-garth of Newcastle-upon-Tyne—one room of which is said to have belonged to the county of Durham; and in

it the officers of the sheriffs of Newcastle and Northumberland had no power to arrest any person while there for debt. The old bridge which crosses the Tyne at this ancient town was built, about two-thirds at the cost of the town, and the remainder at that of the county of Durham: a large blue flag-stone on the front path marks the division. For long, a sturdy beggar stood here, and solicited alms, and was not interfered with by the police authorities of either side.

Here and there, in various parts of the metropolis, there are pieces of ground which may be called no man's land; for, they seem neither to belong to the parish authorities, nor to any known individuals. They are unpaved, and unswept, and often allowed to be a nuisance to surrounding parts. Opposite All Saints' Church, in the Caledonian-road, Islington, there is a place of this description. This is of triangular form, and is surrounded by a small curb-stone. Here the itinerant auctioneer can pursue his doubtful calling: others assemble crowds which are in a chief measure collected for an especial purpose; and many of the unwary have their pockets picked, or in other ways suffer loss. On Clerkenwell-green, showmen and others can open their exhibitions without leave from the authorities.

The debateable land around the more thickly inhabited portion of the metropolis, the margin where town and country are struggling for existence, is, as may be learned in the history of both ancient and modern London, a source of danger. In a locality of this description pestilence has generally fired off its first dart. It was at the top of Drury-lane that the great plague which preceded the Fire of 1666 first commenced; and in the suburbs there are still conditions which are not unlike those of the north part of Drury-lane about 200 years ago. In more modern times, we have had raging fevers, cholera, and other preventible diseases, in similar localities. Nor can we wonder at this, when we think of the ill-drained condition of those places, the open ditches, neglect of paving, and the nature of the water supply. It is, however, a matter for thankfulness, that, except from the negligence of inspectors, we can have no houses raised throughout the London district without the provision of sufficient drainage, roads, water, and gas. Miles of open ditches have disappeared during the progress of the Main Drainage works, and others will follow; and before many years have passed, those miserable cottage-dwellings planted carelessly upon the soil, to which we have so often directed attention, will, it may be hoped, have given place to those of better condition.

There will, probably, be always an extra amount of sickness in all new neighbourhoods,—particularly in those which have clay foundations,—until the ground has been well dried by thorough-drainage.

THE NEW GOVERNMENT OFFICES, DOWNING STREET.

In giving the list of tenders for the new Foreign Office, which will be found in our usual column, some explanation of the present condition of the extensive works is necessary.

Up to the present time, the contract for the foundations and concrete of the Foreign Office, has alone been completed. The cost of this portion of the work has been 16,117*l.* The present tender, accepted, embraces the whole of the superstructure of the Foreign Office, and amounts to a little over 195,000*l.*

The works of the India Office on the western portion of the ground, or next the park, are advancing with considerable rapidity. The expiration, in 1866, of the lease held by the Government, of the temporary India Office in Victoria-street, has rendered it necessary to proceed with the new works with all possible vigour. The contract, therefore, has been let in sections, to Messrs. Smith & Taylor, in order to avoid the delay that would otherwise occur while the quantities were being prepared.

Some of the decorative details of the lower portion of the building are now apparent. We ought not to attempt a conclusive opinion of an incomplete work; but we are obliged to say that the seeming deficiency of base, and the details generally have caused us some apprehension. We have once hazarded the theory,—differing from the views, both of the architect's opponents and those of his friends,—that the course taken as to the style, coupled with the selection of an architect skilled in the designing and erection of Gothic buildings, ought to result in the very architecture which all who are not mere imitators, have been striving to attain to and realize. Ought we to abandon the theory, and incline to such views as we have adverted to, that are of the class which would substitute, narrow-mindedly, *style* for *art*, and Mediævalism or Classicism for Modernism (for, we beg our readers to observe, there is no question now before us as to the adoption of Gothic or Italian, in the Government offices, or elsewhere); or, what ought to be our bent? We are neither disposed to abandon the theory, nor to have doubts of Mr. Scott: we prefer to suppose that present appearances should not be taken as conclusive, and that no one can have better learnt the lesson which the spreading base, and the effective mouldings, of Mediæval Gothic buildings, teach for universal fructification, than the very able man who is now the architect of the new Government Offices.

LIVERPOOL IMPROVEMENTS.

The proposed street improvements were last week taken into consideration by the town-council. Mr. C. Aspinall opened the discussion. It was, he said, perfectly clear that the council should be unanimous on the necessity of widening Church-street; and it was equally certain that no widening of Church-street would be desirable unless they went from Paradise-street, from the south side, up to Postoffice-place. The shop occupied by Mr. Tooke came out several feet just at Old Postoffice-place, in front of the next shop occupied by Mr. Grundy. If the improvement were perfected up to that point, and if the Athenæum area were covered over, and a few petty obstructions in the way of steps removed, then Church-street would be a magnificent continuation of Lord-street. At present it was a very unsatisfactory road, considering the amount of traffic which must go along it. The moment they got to Church-street, just as many inconveniences arose from the limited character of that thoroughfare, as though Lord-street also were narrow. At the last meeting, the council sanctioned the widening of Church-street up to Church-alley. If that were carried out, they would have a wide street up to the end of the Churchyard; and then, like the neck of a bottle, they would have three shops, doing all the mischief that the narrowness of the street did now, and presenting an eyesore that would be positively ridiculous. All he asked was, that they should take the property if they could get it upon reasonable terms.—Alderman Holme said that in computing the means at the disposal of the council for effecting improvements, he had taken the income of last year as a very fair average of the income which he thought they might reasonably expect for some years to come, and that amount was 43,298*l.* It had been stated that the income of the council was 93,000*l.*; but deducting the 50,000*l.* of the suspense fund, which the council had funded out of its income, their income would be reduced to 43,000*l.*, and out of that, 1,595*l.* had been expended in anticipation of next year's income: for the purpose of not leaving the corporation bare, he should take the income at 40,000*l.* a-year, which would be about the fair surplus income for some years to come. The improvements already sanctioned could be accomplished out of this income; but if the council were to sanction those now proposed, these additional improvements must be made out of the rates. The council was addressed by other speakers, and the motion was then put to the vote and carried by 29 against 11.

The council then considered the approaches to the landing-stages of the harbour, and the following resolution by Mr. R. Gladstone, as a substitute for one mainly to the same effect by Mr. Picton, architect, was agreed to:—"That in the opinion of this council it is expedient that steps should be promptly taken towards the improvement of the approaches to the landing-stages; and that, as a first step towards this object, a plan should be prepared, under the direction of a committee of the council and the dock board, as the basis for further negotiations."

A motion to the effect that it is desirable to provide parks for the public, and that, with this object, it be an instruction to the improvement committee to make the necessary inquiries respecting available and suitable sites, and the cost of the same, and to report thereon as early as possible to the council, was also agreed to; and another, "that powers be applied for, in the proposed improvement bill, in the next session of Parliament, to make a new street, 60 feet wide, commencing at the corner of Church-street and Paradise-street, and running in a south-eastwardly direction, and terminating at the corner of Slater-street and Duke-street, net estimated cost 81,500*l.*," was lost by 15 to 10.

Some difference of opinion having arisen, as we have before noted, between the proprietors of the New Liverpool Exchange Company and the frequenters of the present Exchange, relative to the proposed new buildings, a committee was recently appointed at a public meeting to confer with the directors on the subject. This committee has issued a report to the effect that the new company proposed to take down the entire block of buildings at present in existence, and in the new one to erect a piazza, which would give as full accommodation as the piazza at present surrounding the Exchange area.

THE REMUNERATION OF TOWN-SURVEYORS.

We have elsewhere referred to doubtful results of the system of inadequate payment of the surveyors, as well as inspectors of nuisances, of many towns. Qualifications of a high class are required in the holders of the kind of office first alluded to; and we apprehend they are also in those of the other office.

Recently, the outlay of the borough surveyor of Bradford has been under discussion, consequent, it would seem, upon a proposal to advance the salary from 200*l.* per annum to 300*l.*; the latter, one would think, a small sum for the duties in such a town. At a meeting in Bradford convened by the Cottage Owners' Protection Society, Mr. Elliott, who was in the chair, observed that the expenses of the council of the borough were becoming very great. There were some forms of expenditure which were high already, and they were tending to become higher. There were great works entered upon which must go forward, as the waterworks, the system of drainage, and other improvements. Still, there were some departments in which the expenditure might be kept down. Some persons were of opinion, for instance, that the present salary of the borough surveyor was quite sufficient, while there were others who thought that, if the salary were increased a little, it ought not to be increased to the extent which some members of the town council proposed.—Mr. S. Auty argued that as some of the estimates of the surveyor were much higher than the works were let for, he was incompetent. He had no desire to screw down a man's salary so that he could not live, but he did not think that 200*l.* a year was to be despised, especially when the salary was certain and not exposed to deduction in the shape of bad debts. He moved a resolution to the effect that, in the opinion of this meeting, the town council of this borough are not justified in making an addition to the present salary of the borough surveyor, as neither his qualification, nor the amount of labour to be performed by him entitle him to claim an advance.—Mr. R. Moss moved the adoption of a memorial to the town council, requesting them, on various grounds, not to make an advance in the salary of the borough surveyor.—Mr. H. Barker seconded the motion, and stated that, if the situation were vacant, he had no doubt that fifty men, as well qualified as the borough surveyor, would be glad to take the office at 200*l.* a year, which was a very handsome salary.—Mr. Councillor Schofield entered into an explanation in vindication of the borough surveyor. He contended that his experience and skill were such as to entitle him to the confidence of the town council and the burgesses. His drainage scheme was of such a character as to have won for him the commendation of the most eminent professional men throughout the country. He had also done great service to the borough by the able manner in which he had given evidence in the House of Commons. He (Mr. Schofield) had voted for an addition of 100*l.* a year to the salary of the surveyor, and would support such an advance. Ultimately the meeting adopted the motion deprecating the advance.

UTILIZATION OF SEWAGE.

Although Baron Liebig's authority is not undisputed in this country as regards agricultural and sewage questions, his letter, to which we lately referred, is likely, from being extensively quoted in the country papers, along with an introductory letter by Mr. Mechi, of Tiptree, to have some influence with our farmers, many of whom have a strong prejudice against town sewage as a useful manure for their land. We shall therefore endeavour briefly to give our readers some idea of the Baron's letter, and also of Mr. Mechi's.

The problem to be solved, says Liebig, is, how much of the efficient elements of guano a farmer

can convey to his field in a ton of sewage; or how many gallons of sewage water are equivalent to a cwt. of guano. Lacking more certain data, I take Professor Way's analysis of sewer water, which this most reliable chemist made at the request of the General Board of Health. . . . It results that 101 tons (20,200 gallons) of this sewer water contains the same amount of phosphoric acid, more than three times as much ammonia, and sixteen times as much potash, as one cwt. of the best Peruvian guano. . . . If to the sewage obtained daily from London, 100 tons of superphosphate of lime (at 20 per cent. of phosphoric acid) be added, the value of the daily voidings of the metropolis, or the sewage of London, is made equivalent to 247 tons of Peruvian guano; or, by the addition yearly of 36,500 tons of superphosphate, we may acquire the value of 90,155 tons guano, at 13*l.* 12*s.* 6*d.* = 1,228,364*l.* Deduct the price of 36,500 tons of superphosphate, at 5*l.* 5*s.* = 191,628*l.*, and we have 1,036,736*l.* as the money value of the sewage. To this should be added the worth of the potash in the sewer water. Potash is the manure which the farmer obtains with the utmost difficulty: it is that element, too, which renders his stable dung (the amount of phosphoric acid and ammonia being the same) of greater value and efficacy. In 247 tons of guano about 1½ ton of potash is contained; but every day 7½ tons are obtained in the sewer water; which gives a surplus of 6 tons, corresponding to 11 tons of sulphate of potash, giving yearly 4,015 tons, which, at 18*l.* per ton, shows a money value of 72,270*l.* Add this to the sum above given, and we have, as real annual money value of the London sewage, 1,109,006*l.* The surplus potash won from the sewer water daily corresponds to the amount contained in 866 tons of stable dung. Without the addition of the superphosphate, the value of the sewage of London would only be 304,015*l.* It is neither fantastic nor ridiculous to believe that, without purchasing foreign manure, and by a judicious utilization of the sewage of towns and villages, England would be able to dispense with the importation of food from abroad.

Mr. Mechi, basing his own on Baron Liebig's letter, remarks that the Baron's letter settles definitively the question, hitherto much disputed, of the value of a ton of town sewage, taken at its outlet. How much is to be deducted from that value for conveyance to the fields, he continues, is another part of the question; but it is generally admitted that from one farthing to three farthings per ton, according to elevation, would be an ample deduction. At Croydon the cost is not more than one farthing per ton: at this rate there is an ample scope for profit to the ratepayers as well as farmers, at Baron Liebig's estimate of fourpence per ton. Hitherto nearly all our attempts at sewage irrigation by means of steam-power, pipes, hose, and jet, have been imperfect, from a want of sound engineering skill: hence they have been unduly costly. A mistake of an inch in diameter of our supply pipes may increase our expense of delivery 100 per cent.

When once we are agreed as to the value of a ton of town sewage, *delivered on the land*, we shall not long differ as to the propriety or profit of applying a given quantity per acre.

As to Liebig's theory, that in order to build up a perfect plant we must have all the necessary materials or elements in due proportion and in a fit condition, Mr. Mechi says, no one certainly would doubt this, if applied to a house—for, wanting either lime or water, useless would be the bricks, timber, slates, and other materials.

THE SANITARY CONDITION OF OUR TOWNS.

WHITEHAVEN—SUNDERLAND—LIVERPOOL.

A recent wet, cold, and cloudy summer was found, at the close, to have been a remarkably healthy one, and for no other ascertainable reason than simply because the filth of our towns, instead of lying festering in the sun, polluting the air, and destroying health and life, was washed away continually; and, even while it lay, was not exposed to the reeking influence of warm sunshine. The dryness, warmth, and clearness of the past summer have had precisely the opposite effect—of polluting the air with the rotting filth, which there was little or no rain to wash away; and the natural consequence has been a notably unhealthy state of our towns in all parts of the country. The mortality of the metropolis itself has risen above the average; and so is it in various other places, as at Liverpool, Sunderland, and Whitehaven, of which, more particularly, we have now to make a few notes. And first of Whitehaven, because this town is notoriously and by far the most filthy of those named, and of most, indeed, that can be named. One of the local papers, the *Pacquet*, itself admits that—

"It is acknowledged on all hands that the town of Whitehaven, as regards its sanitary condition, is in about as deplorable a plight as a town can be. Without drainage, with stagnant open water-courses and badly scavenged streets, infested with pigstyes and cesspools, and the night-carts and other attendants parading the public thoroughfares as if in procession the day through, in the hottest weather, it would in sober seriousness have been miraculous if the inhabitants had escaped all the epidemics with which other parts of the country, having much better sanitary regulations, have been visited."

A recent writer, in another local paper, the *Herald*, thus speaks of the town:—

"Many of the streets and alleys are very narrow, and the ground on either side completely crammed with boxes of stone and mortar, in many cases four stories high, built for the most part from any plan or no plan, without any supervision by the town authorities to ensure their construction on a healthy principle. Few open courts are left for ventilation. Passages, staircases, and backyards (where there are any), are so contracted that it is with difficulty the inmates can get squeezed into them and out of them. Cellars are constructed in low situations where cellars ought not to be, and many of the latter used in a double capacity for living and sleeping rooms—in not a few cases as many as eight persons sleeping in a hole containing about 500 cubic feet of contaminated air, and no means of changing that air. Bedrooms are constructed without any means of ventilating them, save by opening the door; or in others, more favoured, by a casement or lower half of a window being opened. Many not otherwise ignorant persons will not open any of them in bad weather. Pigs are kept (often in a filthy state), in close proximity to living-rooms, some in cellars under living-rooms, and some in a few cases in attics. Cowhouses, stables, and slaughter-houses, not kept too clean, bring up the rear. Add to this the entire absence of efficient drainage, many dwellings having the waste water running in open channels through the rooms or lobbies. In some cases single rooms are let as single tenements without being allowed to use a neighbouring necessary; and, as the tenants cannot consume the soil, it is kept fermenting in the room till night sets in, when it is pitched right into the streets, with, in some favourable instances, a bucketful of water pitched after it, only to drive it to their neighbour's front, there to be the next morning exposed to a summer's sun."

"Well! what of fever, of which you have said nothing?" remarks some sanitary sceptic: "here you have made out just the case for it." Precisely so: Whitehaven is just the fitting *nidus*, as the medical men call it, for fever,—and this is precisely the summer for the development of fever in just such a town as Whitehaven. And fever accordingly does prevail in Whitehaven. At a recent meeting of the local board of guardians, a professional man, Mr. J. B. Wilson, surgeon, in expressing his approval of the appointment of salaried sanitary inspectors for the different parishes, said that the town was in a shocking state as regarded sanitary matters, and it was really frightful to contemplate the amount of sickness, though fortunately there had not yet been any great mortality. They did not know, however, where the matter would end, as the epidemic was becoming far more virulent. Damp, filth, and heat, it was well known, gave rise to all these cases of fever, and he was very glad, therefore, that these inspectors had been appointed. It was certain that the present dreadful state of matters was owing to the laxity of the officials; and no doubt great blame attached to their governing bodies.

At one time, quite recently, in this comparatively small town, there were 800 fever cases at once. The authorities, however, having at length been roused to the necessity of doing something in the shape of cleansing, lime-washing, &c., to abate the "plague," as it had come to be called by the country people of the district; the cases have since fallen in number to about 700; and there are hopes that a continuance of the palliative and temporary sanitary measures will rapidly reduce the epidemic still further.

At Sunderland, of late, the rate of mortality has greatly increased in three districts of the borough. For the fortnight ending August 12, there were 130 deaths, against 112 in the preceding fortnight. In the four districts south of the river there were 99 deaths, against 45 last year in the corresponding fortnight, being more than double what they were at that time. The mortality in Monkwearmouth is also very great. Out of 27 deaths from scarlatina, 26 were children of six years and under.

Here the sanitary sceptics have been at work, propagating the false idea that it is the sanitary works themselves, of late carried out in the once notorious Sunderland, that are to blame for this increase of mortality. Strange perversity of fact and judgment! It has since been clearly proved that it is precisely where the beneficent influence of sanitary improvements has not yet extended, that the increased mortality has been prevailing. The Sanitary Committee of the Town Council have just reported on the subject; and in their report they say:—

"Has there then been a failure in the system of sewerage and drainage, and other sanitary works carried out by the Corporation? or have the building regulations been proved to be arbitrary and useless, tested by their sanitary results? The Council have the satisfaction of learning that such has not been the case. On the contrary, there never was a time when the value of all these works was more manifest. Where there has been largely increased disease and death *it is where sanitary works have not been carried out*, and where evils exist which could not have been the case had the dwellings of the people been erected in conformity with the requirements of the present building regulations. It is where buildings have been run up on wet clay or ill-drained soil, and where *no space adequate to the requirements for health* have been left in the yards; *when those yards, too, each contain a reeking dunghill closely abutting on the dwelling rooms; it is in these districts, and in these districts almost exclusively, that fever, diarrhœa, and cholera epidemics find a congenial soil* on which to fix and fructify, carrying also by contagion disease and death into districts which would otherwise be exempt from such visitation. It is a noteworthy fact, that *it is not in the densely populated parts of Sunderland parish, or other parts of the borough where water-closets have been most introduced, that the increased mortality has been felt; but it is where these means are almost entirely non-existent*, where the open privy and ashpit system prevails, that the epidemic has been most felt, and where mortality has been and is the highest."

The infant mortality of the respective districts of this borough in the past six months has been—

South Bishopwearmouth	49	per cent.
North Bishopwearmouth	51	"
Sunderland	52½	"
Monkwearmouth	53½	"

This is much above the average of the kingdom, for infant mortality, fearful as that average itself is. There is a great excess in the Hendon-road; also, in portions of Monkwearmouth, and other localities notorious for their unsanitary condition. It is due to the sanitary measures already carried out in Sunderland, however, to remind our readers that a great mortality of infants is nothing new either here or elsewhere. In 1860, as we noted early in 1861, the infant mortality at Sunderland was 50 per cent., while its general mortality was *only* 22; and, while 500 out of every 1,000 infants died in Sunderland, *only* 176 died in Halifax, Bradford, Derby, and Birkenhead.

The publication of these facts will, it is hoped, remove many unfounded impressions of the effect of the drainage and other sanitary works already carried out, and induce a more general and hearty co-operation amongst the owners and occupiers of property, in supporting and giving effect to the measures adopted (and to be yet adopted it is to be hoped) for the improvement of the health of the borough. Sanitary laws, indeed, and their application are recommended by the truest economy and the highest considerations of humanity.

An additional inspector of nuisances, "of good education," is recommended by the Sanitary Committee to be appointed, with a salary of 100*l.* per annum. In many towns, the inspectors of nuisances are far from being men of sufficient education, or enlightment on sanitary subjects: doubtless, inadequate remuneration is a special cause of this. Moreover, the office is not one that from its name is likely to be at all attractive to, or chosen by, men of good education. Could not the title of the office be changed to something like sanitary inspector? Were a sufficient salary offered, no doubt medical men, as the best of all such inspectors, could be induced to offer their services.

Prior to the proceedings in the Council to which we have referred, there were some of importance belonging to the same subject, or relating to the building regulations. A large proportion of plans not having met with approval, Mr. Crossby said, that might seem strange, but a deputation from the sanitary committee had waited upon the building committee, and requested that no plans should be sanctioned until the sewerage was put in. If the drain was put in before the building was commenced, it was difficult to know where the branch drains would fall.

Ald. Williams said what the sanitary committee wished the building committee to do, was to ensure provision for drainage. In the inspection of the sanitary committee, they came upon houses where there was no main sewerage at all, and where house-drainage was impossible. The object of the deputation to the building committee was to secure that no street plan should be passed until some knowledge was obtained whether the owner of the ground, if it was his duty, would make the sewers.

Mr. Crossby said, there was no sewerage, and it was the duty of the corporation to put in the sewers. It was a hard case that people should be prevented building because the corporation did not see to the drainage.

Mr. Thompson said, it was clear that the drainage could take no harm by allowing the buildings to

go on; the main sewers were not constructed, and the drainage could be done afterwards.

Mr. Middlemiss said, it had hitherto been the practice to pass plans, whether there was any provision for main sewerage or not. With reference to certain ground, it was found that there were no sewers in the back streets, and they could not connect the house drains; and therefore it was wrong to have the houses occupied until they were fit for human habitation. It was the duty of the building agent to give notice to the engineer, whose duty it was to give a certificate whether the houses should be occupied or not. If he found no provision for drainage, he would have prevented them from being occupied; it would then come out whose fault it was that the sewers had not been put in. When street plans were sent in, the width and the level of the streets were ascertained, but no section was shown for drainage purposes. If the plan passed, it was the duty of the engineer to set out the levels of sewerage, and at once see it carried out. But the land proprietor or building agent had no control over the drainage. It was the duty of the building agent to come to the corporation engineer, and request his attention to it, as to the setting out of the levels. That had not been done, the houses were occupied, and no sewerage had been put in. In one case, where the plans were rejected, the plan would have been passed if the houses intended to be built, were to be built on the surface of the land. But it was intended to form a cellar underground; and it was the object of the Act of Parliament to prevent people making cellars below the level of the sewers. He would recommend the council to pass those plans where it was proposed to build on the surface of the land, and to disapprove of those that intended to sink cellars.

The Chairman felt they had been proceeding altogether in error. A system of sewerage should be prescribed and laid in. There was no doubt that the corporation must initiate or prescribe the sewerage, and the question of pay was between them and the owner of the ground.

Mr. Simey said the principle arrived at in the highways committee was, that the owner of land laid out for new streets, calling upon the corporation to put in the sewerage at the expense of the town, should pay as his part of the cost of the sewerage, such proportion of the whole cost as the ratepayers had already paid for the sewerage of the town. That varied each year, according to the amount paid. He thought it most inexpedient to allow streets to be laid out without efficient means of sewerage being provided. If he mistook not, it was not the duty of the corporation to put in sewers.

The Chairman.—It is our duty to indicate on the plans where they should be put in.

At Liverpool, the medical officer of the health committee of the town council recently reported that, during the week ending August 15, the number of deaths registered in the borough of Liverpool was 316, or 190 in the parish, and 126 in the out-townships; being an increase of 53 deaths over the corrected average of the last ten years. Zymotic diseases occasioned 125 deaths, being an increase of 28 on the average. Of these deaths from zymotic diseases, 7 were due to measles, being one above the average; 12 to scarlatina, being 4 above the average; 19 to whooping-cough, being 10 above the average; 21 to typhus (registered typhus and gastric), being 14 above the average; 46 to diarrhœa (of which 40 were of children under two years of age), being 3 below the average.

Having been asked if local influences had anything to do with the increase of fever, the officer, Dr. Trench, replied that in London the mortality, like that in Liverpool, was in excess of the average of the last ten years. He hoped the committee would duly consider the matter, and recollect the fact when he came to ask them to assist him in turning all privies and middens in courts and other close places into water-closets. The committee might rely upon it that the town would never be free from an excess of zymotic diseases, until privies and middens were got rid of. He might have got rid of them upon his certificate, but the matter was one that involved an entire revision of the scavenging of the town.

A few minor notes connected more or less with the subject in hand may be here appended.

At Huntingdon it appears to be at length determined to adopt a drainage scheme which, it is hoped, will rid the town of the offensive Back Brook, which has been so long and so loudly complained of. The four parishes have each selected a committee of five for the purpose of carrying out this desirable object; and at their first meeting Mr. Hutchinson submitted plans for the proposed scheme, which embraces the laying down a separate drain from houses near Quail's Meadow, all the way to the river, catching in its course the outlets of the present sewers from the town which supply the Back Brook with its offensive matter. This new drain would be entirely covered over, and of sufficient dimensions to carry off the storm water from the town, as well as the present sewerage. It was ordered by the committees that matured plans be prepared, and also an estimate of the expense for completing the work throughout. It is proposed to have a tank for the reception of the soil near to the river, so that the water of the Ouze be not more polluted than at present.

At Lincoln, the state of the river Witham between Brayford and the Stamp-end Locks has long been filthy and disgraceful, and the wonder is that fevers have not resulted. The sanitary committee have just resolved to cleanse the river between the two points named. They have thrown into the water fifty tons of lime, and removed the rank substance from the surface: the river is now clear, and no disagreeable smell is at present emitted. The sewage deposited under the High Bridge has been removed, and the engine at Torksey has been employed in pumping a large quantity of water into the Fossdyke, which is thereby much purified, and stagnation prevented.

At Malmesbury, and at Horsham, waterworks are projected. An experimental well is to be sunk at Horsham, at a cost of 200*l.*, of which 100*l.* have already been subscribed. A water company is being established at Malmesbury with a capital of 1,600*l.*, in 5*l.* shares. Shares to nearly 1,000*l.* have already been taken.

THE WATERWORKS IN KENSINGTON GARDENS.

These works, now in operation, do not fully realize the anticipations of the Commissioners of Woods and Forests; and details of their architecture are but poor: yet they seem to be the most utilitarian and satisfactory of recent public outlays, so far as the health and enjoyment of the multitudes frequenting these beautiful grounds, and living (we cannot say *sweet*) waters, are concerned. A lodge, in a pleasing position at the head of the Serpentine, enshrines an arrangement of mechanism which is a model of order; and numerous visitors are daily admitted to view the steam-engines and the firing and working.

Messrs. Watt, of the Soho Works, Birmingham, designed and constructed a pair of engines, of 12-horse power each; their appearance in action, clean and glittering like clockwork, is the admiration of all the visitors who are interested in machinery. One engine works the well, which was sunk to a depth of 325 feet, to replenish the scant natural supply of the lake: the old stream called the Westbourne Brook, being nearly dry in summer; and the state of the Serpentine, in hot weather, having hitherto been not only disgusting to the view, but most unhealthy. To such a pitch of fetor had this pollution arrived, that the precincts of the water were avoided; whereas now, thousands hourly frequent the grateful shades of the vicinal plantations, and enjoy the fresh and exhilarating influences of the teeming fountains. The second engine, of similar power, is used solely to pump up the water from the lake, and throw it in again; thus causing a circulation, and animating the pool which otherwise would remain, as formerly, stagnant. For this object a culvert was dug to draw off the water from the lower, or Knightsbridge end of the Serpentine, conducting the flow by a graduated fall, back to the engine-house, a distance of over a mile, apparently up-hill, to be there pumped up and returned to the reservoir.

During summer, for thirteen hours daily, one engineer works and manages the whole system. Forty thousand gallons of water per hour are raised and delivered systematically; and it is a subject of general remark, and no little admiration, that no smoke is seen to issue from the chimney-tower, save only at the moment of first ignition, and then no more than an ordinary fire-hearth might occasion,—a ton of coals and coke, mixed, being daily consumed in the operation by the engineer, who seems to be gratified in exhibiting his neat interior to all comers.

To Mr. Thomas Docwra, C.E., of Ball's-pond, belongs the merit of having arranged, methodized, and brought into operation, the source of fresh spring-water which gives life to the whole system; and were it considered necessary to increase the volume of fresh, he finds that, by other and deeper sinking into the gravel strata of this vicinage, he could double or quadruple the supply at present afforded by the miniature pieces of mechanism now in action. The subterranean springs of Westbournia are well known to be abundant, and the water-shed the most extensive of the high suburban districts. Spring-street is so called from the fact; and the gravel and clay beds alternately preserve, retain, and purify the natural supply.

It could hardly be expected that, without a fresh infusion of spring-water, the long lake could be kept in proper condition by the reflux and circulation of its own contents only. Natural streams preserve their freshness, and deposit accidental impurities, by constant flow and action of the waters; but, in their course, Nature provides refreshing tributes in every cumulative brook; and so of larger rivers: but it is surely worth, for the great population of this metropolis, the interest on the original outlay, the cost of 6*s. a d-y* to *one working engineer*, and some trifle more for coals, to secure a healthful and delightful garden and fountains to the dense throngs who frequent the groves of Kensington throughout the summer season. The shade of Dr. Jenner may contemplate with pleasure the highly beneficent result.

Quondam.

COMPETITION.

Mechanics' Institute, Newcastle-upon-Tyne.—In reply to a local advertisement offering premiums of 25*l.* and 5*l.* respectively, for designs adjudicated first and second in order of merit, eleven architects submitted drawings for the proposed Mechanics' Institute. Mr. Thomas Oliver has had awarded to him the first premium, and Mr. John Wardle the second.

SHAKSPEARE'S HOUSE, NEW-PLACE, STRATFORD-ON-AVON.

Mr. Halliwell, who has been for some time making researches on the Shakspearian sites, at Stratford-on-Avon, has lately caused further excavations to be made in New-place Gardens, the site which he had purchased some time since, and that of the house in which the poet last lived. But a small portion of the original structure remains. "A Brief Guide," just issued by Mr. Halliwell, says that on the south side of the excavations (abutting on Chapel-lane) "will be observed the foundations of the external wall of Shakspeare's own house, passing under a modern fire-place belonging to the Clopton residence;" and that "to the right of the fire-place is Shakspeare's well." In the centre of the foundations, a solid piece of brick-groining belonging to the cellar of the original house was found; but a few days since some explorations were made in the street front, and extending a short distance down Chapel-lane. At the corner of the latter was discovered a small portion of the original foundation, which showed that the house stretched further into the lane than the wall of the garden at present shows. In Chapel-street the excavations brought to light a flight of steps apparently leading into an area and thence to the lower apartments of the house. It may not be idle to speculate that down these steps "many a time and oft" the "peeler" of that day, some ancient *Dogberry* or *Seacole*, stealthily crept, treading softly into the precincts of the larder, and there, whilst ogling the cook, regaled himself on cold mutton and quaffed a flagon of sack. The local journal hopes the period is not far distant, when may be seen the utter demolition of what is called the theatre—according to it, a most unsightly structure, and the sooner razed to the ground the better,—so that some part, if not the whole of the original scheme, may be carried out, and the gardens thrown open freely to the public. Something of the kind will now be done, as in a few days visitors desirous of going over the grounds, will be permitted to do so by applying for tickets of admission at "the birth-place," thus giving ready access to a spot in which every one must feel an interest.

LONDON STREET ARCHITECTURE.

HOUSES AND SHOPS IN WORSHIP STREET, FINSBURY.

The six houses in Worship-street, represented in our engraving, have taken the place of miserable, ill-ventilated, tumble-down buildings. They were erected by Messrs. Browne & Robinson, under the direction of Mr. Philip Webb, architect. Some interest attaches to the site of these houses. The ground is said to be that on which Shakspeare was accustomed to take charge of the horses of citizens who had gone in to see the performances at the Curtain-road theatre. Afterwards, a military depôt of the Parliamentary army occupied the spot: some remains of it existed till lately. About 1745 the

HOUSES AND SHOPS IN WORSHIP STREET, FINSBURY.—Mr. Philip Webb, Architect.

ground was purchased by one John Gillum, and thence obtained the name of Gillum's-fields. Up to that time, the road had been called Hog-lane; but the name was then changed to Worship-street, partly because the first row of houses was built out of the materials of the old church of St. Mary, Islington.

The name Gillum's-fields continued to be applied to the space behind the houses; but, like the other fields of London, they soon lost their rural character, and degenerated into a dingy yard, communicating with Worship-street by means of an alley. Eight wretched tenements, which opened into the yard, have been pulled down, and the entire space is now occupied by the new workshops and yards.

The shop fronts project, and are tiled with common flat tiles. Beneath the show-board, an open iron frame, to give light below, occupies the space. The first-floor in each house comprises two windows spanned by a discharging arch, of brick, with sunk head or tympanum: the pier, of brick with flat cap of stone, is narrow enough to form a mere mullion between the two lights, leaving them effectively one for use within. Three windows light the second floors: their sills, of stone, being bevelled and run together, form a string. A plain cornice, with dentils of bricks and other simple mouldings, terminates the wall, whence a high-pitched, plain-tiled roof rises, to be broken in each house by a dormer that projects like a hood in front. At one angle of the block a drinking-fountain is placed. One merit of the work consists in the use of sound real materials: an objection is a degree of rudeness in the finishings internally, which may militate against the speedy occupation of the houses and shops by persons able to pay the amount of rent which would be required.

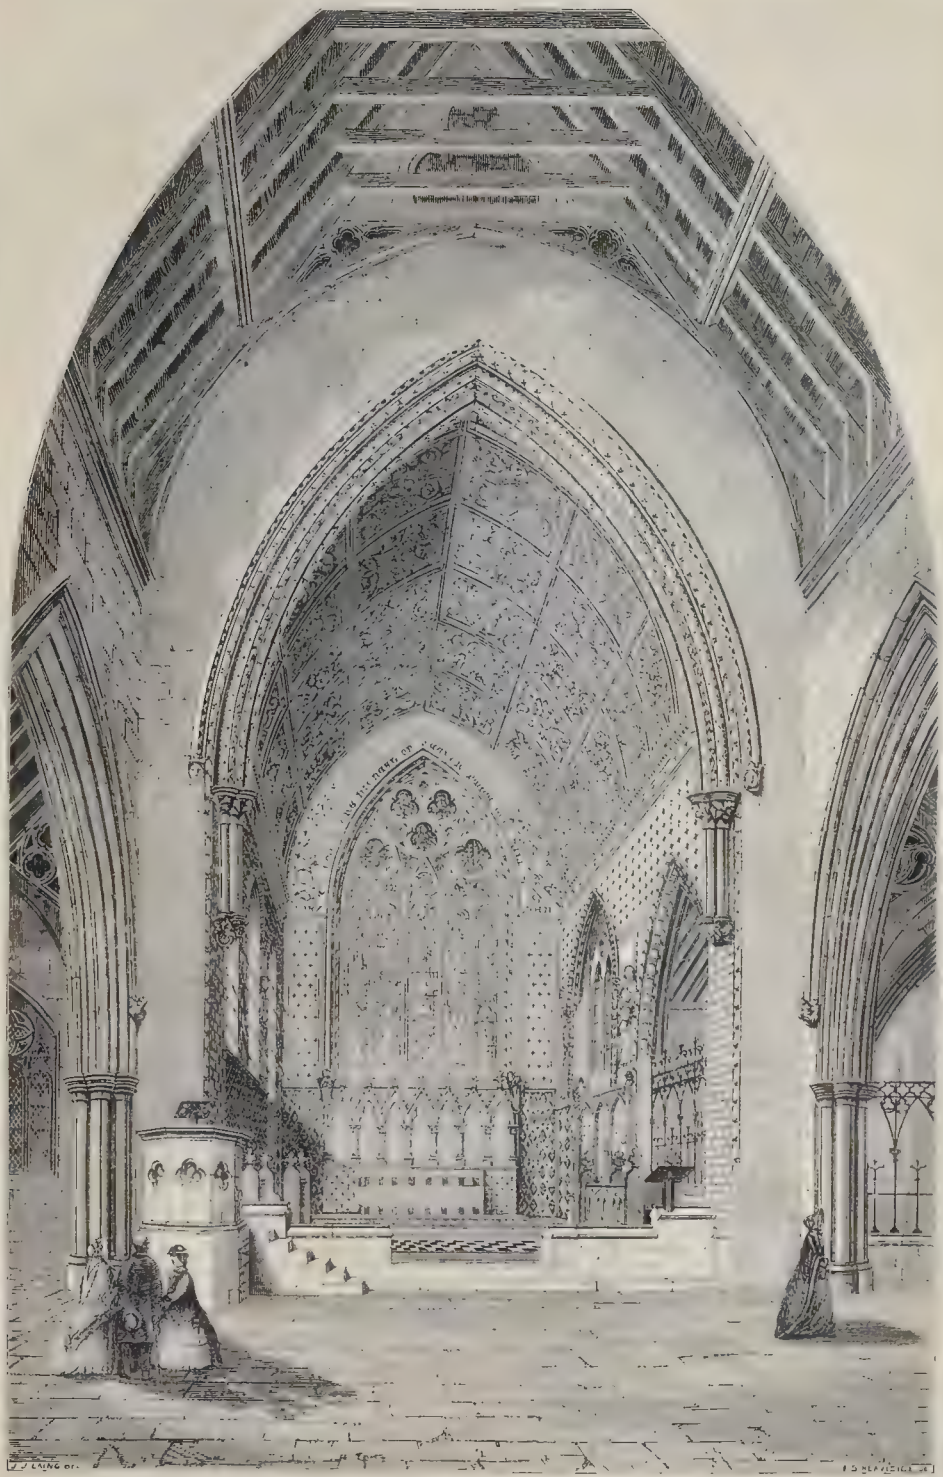
ST. ALBAN'S CHURCH, ROCHDALE.

The church of which a view of the interior appears in our present number, was erected two or three years ago; but through the liberality of Mr. Jonathan Nield, of Dunster House, in the parish of Rochdale, constant additions are being made to the building, decoratively or structurally. Mr. Nield is now about to undertake the entire decoration of the chancel, in a manner corresponding with his former munificence, and with the character of the church.

The building was designed and carried into execution by Mr. Joseph Clarke, F.S.A.; and the additional decorations are designed by him, and are being executed under his superintendence by artists of a high class.

It is proposed, for the reredos, to paint a triptich, after the manner of the early Florentine painters, the subjects to be "The Lord's Supper," with others supplementary. The east wall, above the string-course, will be painted in fresco, adopting the new water-glass process, with subjects from the Incarnation of Our Lord; whilst the lower part, in a line with the reredos, is proposed to be enriched with Algerian onyx marbles, and ceramic work. A series painted similarly in fresco, —the subjects taken from the miracles or parables of Christ, or from the lives of the saints,—will occupy the upper part of the north and south walls. The lower part of these walls will be coloured, in diaper or otherwise.

The roof, which is panelled in wood, will be richly coloured throughout, and painted with a representation of a choir of Angels.



The stone-work of the arches, &c., will be slightly enriched with colour.

At the sides of the chancel-arch, the Commandments will be written; and above, will be the seven Acts of Mercy, or other subjects.

The present tiles will be removed and a more appropriate floor relaid.

The whole of the enrichments are intended to be of a very costly character; and when completed, they will probably attract much attention.

This description, it may be observed, includes some details of a high-art class which do not appear in the view. Both view and description, of course, are founded on data supplied to us; but we may infer, that since the engraving was commenced, the decoration in the design has expanded in richness and quantity of details.

ST. ALBAN'S CHURCH, ROCHDALE.—Mr. Joseph Clarke, F.S.A., Architect.

PREMIUMS OFFERED BY THE INSTITUTION OF CIVIL ENGINEERS.

We recently printed a list of the papers for which the Council of the Institution in Great George-street had awarded premiums. The council have since printed a list of subjects on which they invite communications in the session shortly ensuing. The list is suggestive and valuable, and even unusually so. It should be procured by most of our professional readers. Besides mentioning authentic details of the progress of any work in civil engineering (Smeaton's account of the Eddystone lighthouse being alluded to as an example), descriptions of engines and machines, and practical essays on such subjects as metallurgy, the list specifies as subjects the following, of which, however, we do not in every case give the full titles:—

1. The decay of materials in tropical climates, and the methods employed for arresting and preventing it.
2. The theory of metal and timber arches.
3. Theory of construction of wrought iron-girder bridges.
4. Landslips.
5. Pressure of earth on tunnels.
6. Artesian well-boring, and sinking large shafts, as on the Continent.
7. Contrivances for facilitating the driving of tunnels, or drifts in rock.
8. The principles in laying-out lines of railway through mountainous countries, with examples.
9. The means of preserving Alpine railways from snow.
10. Experience in iron permanent way.
11. Principles to be observed in the designing terminal and other railway stations.
12. Railway ferries.
13. Locomotive engines for steep inclines, especially when in combination with sharp curves.
14. Working of locomotive engines in long tunnels, with frequent stations.
15. Results of the application of Giffard's injector to boilers.
16. Working expenses of railways, and the influence on these, of the original design and construction.
17. Observations on the flow of water from the ground, in any large district; with rain-gauge registries.
18. The construction of catch-water reservoirs in mountain districts.
19. Accounts of existing waterworks, and the distribution of the water.
20. The means of improving the water supply of the metropolis.
21. Structural details, and results in use, of apparatus for filtration of large volumes of water.
22. Drainage and sewerage of large towns, exemplified by accounts of the systems at present pursued.
23. The employment of steam power and other measures for the improvement of canals as means of conveyance.
24. Iron paving compared with stone-block paving.
25. A history of any fresh-water channel, tidal river, or estuary, including notices of the effects of any works, of the relative value of tidal and fresh water, and of the effect of enclosures from the tidal area, of sluicing, groynes, and parallel training walls; also of dredging, with a description of machinery and cost.
26. Observations of the modifications which the tidal wave undergoes in a river or estuary.
27. Tidal and other dams, and on the use of wrought-iron in their construction.
28. History of any harbour or dock; the reasons for the site, the mode of construction, and the subsidiary works for the shipping, and commercial purposes, with the cost, &c.
29. Graving-docks, and arrangements having a similar object, with the conditions as dependent on rise of tide, depth of water, &c.
30. Floating landing-stages.
31. Swing, lifting, and other opening bridges.
32. Lighthouses, their machinery and lighting apparatus.

Subjects numbered 33 to 47 inclusive, relate to the measure of resistance to steam-vessels at high velocities; to tubular boilers, and the use of steam at an increased pressure, with or without superheating, for marine engines; to the relative advantages of the principle of expansion, as applied in the single long-stroke cylinder engine, in the double cylinder engine, and in the three cylinder engine; to blast engines; to steam fire engines; to pumping-engines, noticing in the case of those for drainage of mines, the depth and length of the underground workings, the height of the surface above the sea, the geological formation, the contiguity of streams, &c.; to turbines and other water motors, in comparison with water-wheels; to the systems of smelting ores, and the manufacture of iron generally; with accounts of the machinery for rolling shafts, and bars of iron of large sectional area, and for producing armour plates, &c.; to the construction of rifled and breech-loading artillery; to the use of steel bars and plates in machinery, for boilers, and for ship-building, as well as for bridges; to the use of steel, as compared with iron of acknowledged good quality, in the construction of locomotive engines; to the Bessemer and other processes of steel-making, and the present state of the steel manufacture on the Continent of Europe; to the safe working strength of iron and steel, including the results of experiments on the elastic limit of long bars of iron, and on the rate of decay by rusting, &c., and under prolonged strains.

Also, a paper is suggested on the transmission of electrical signals through submarine cables (48), English and Continental engineering manufactories (49); and memoirs of the works and inventions of the engineers, Sir Hugh Myddleton, Arthur Woolf, Jonathan Hornblower, Richard Trevithick, William Murdoch (of Soho), Alexander Nimmo, and John Rennie (50), close the list.

The competition for premiums is not confined to members or associates of the Institution.

NEWS FROM AUSTRALIA.

VICTORIA.

There seems to be a general revival in the building trade at this moment; and so many works of more or less importance are in hand, that it is difficult to secure bricks, even at high prices. Labour prices are also firmer than formerly, although employers have no reason to complain of the rate asked by their artisans. There is little doubt that should the population increase, as there is every probability from the attention lately called to the colony, that it will, there will be a great demand for building hands and building materials. All that is wanted to make the country prosperous, and to develop its vast resources, is *population*. There is plenty of idle money waiting for investment; and many would gladly expend their gains in bricks and mortar, could they but see a reasonable prospect for a return on their outlay.

Several new industries have been lately started, and many bid fair to be highly successful. On the banks of the Yarra Yarra a sulphuric acid manufactory has already commenced operations, capable of turning out nine tons of concentrated acid per week. Considering the immense cost of the imported article, and that all the latest improvements tending to economy in production have been adopted, this venture must prove profitable to the proprietors, Messrs. Clark & Hoffman. A paper manufactory is also talked of somewhere in the same neighbourhood.

A company has also been formed, and the machinery ordered, for a cloth manufactory to be erected at Bacchus Marsh, for the manufacture, in the first instance, of tweeds and blankets. As wool is one of the staple exports of the colony; and as in New South Wales, similar establishments have long worked profitably, turning out tweeds which received honourable mention at the late International Exhibition, there is little doubt that this speculation will prove successful, and that, instead of the raw article only, the manufactured will be also exported.

A company is also in course of formation for the manufacture of salt under a patent, secured in the colony, which has been tested and proved to be capable of turning out salt with a profit, at less than one-half what it can be imported for. Victoria truly presents a most favourable field for the enterprising and industrious.

In building operations, Messrs. Sargood, King, & Sargood are pushing on with additions to their warehouse in Flinders-street, which it is reported will cost them some 10,000*l*. At the Public Library, another addition has been commenced. Both these works are in the hands of Messrs. Reed & Barnes. A large brick warehouse has just been completed, from designs by Mr. F. M. White.

There has been some rioting on the extension of the railway line forming from Sandhurst to Echuca, on the Murray. The contractor for this portion of the extension, has been paying his navvies from 6*s*. to 8*s*. per diem, according to ability, and has found no scarcity of men to accept his terms. Workmen on the line opened south of Sandhurst are annoyed, and insist that a uniform rate of 8*s*. shall be paid, and have accompanied their demands by violence. Gangs of from 500 to 1,000 men have been up the line once or twice, driving those off the line who would work, and destroying the contractor's plant. A large body of special constables has been sworn in, and the regular body of police in the neighbourhood largely augmented; so it is now hoped that those who are inclined to work, may work without molestation. The contractor states that he is quite willing to pay eight shillings to those who can do eight shillings' worth of work.

DESTRUCTION OF THE SERAGLIO, CONSTANTINOPLE.

The old palace of Selim, of Mustapha, and of Mahmoud,—next to the principal mosques, the most unique and characteristic feature on the south side of the Golden Horn, has been destroyed by fire. The sudden bursting out of a column of black smoke from the southern extremity of the building announced to nearly every quarter of the city that the quaint old building was in danger. In less than ten minutes the flames, fanned by a strong north-west breeze, spread rapidly over the building; which, being of wood, and dried already to a burning point by a ten weeks' broiling sun, speedily ignited wherever a spark fell; till, in little more than half an hour, the whole pile was irretrievably in a blaze, before the scores of wretched engines which hurried from every quarter of the capital could even reach the Point. The grand vizier, who happened to be at Dolma-baktche at the time, was the first on the spot, having hurried across in one of the palace caiques. He was speedily followed by the whole of the other ministers, nearly all the general officers in garrison in the capital, and about 3,000 troops. A couple of strong boats' crews from H.M.S. *Weser*, lying off Tophaneh, also hastened to the scene, and lent strenuous aid. The usual remedy of pulling down large perches of buildings on either side was in vain resorted to. Incredible as it may read to those who know the distance, not merely sparks, but whole flakes of fire were carried right over the brow of the hill which separates the Point from St. Sophia, and, falling in and around the At-meidam, ignited more than one house in the neighbourhood. The fire which spread thus distantly was not long in reaching the beautiful alleys of cypresses behind the palace; and as these caught one after another, the blazing current was carried on in an almost unbroken wave to the successive courts and buildings in the rear. Only one life was lost on the occasion. Of the many narrow escapes that of the grand vizier was one of the closest. Accompanied by a dozen or so of soldiers, his highness had penetrated into the centre of the building, where it was believed some of the fair inmates yet remained. Whilst searching for these, the flames literally surrounded the room in which Fuad Pasha and his companions were; and it was only by escaping through a window which opened on the Marmora, that his highness and the men with him effected their retreat but a few minutes before the roof of the room they had left fell in. About an hour after the fire broke out, the sultan himself proceeded to the scene; but, on the urgent advice of his ministers, his majesty remained only a short time in the dangerous neighbourhood, returning to Dolma-baktche, whence the progress of the conflagration was visible.

The site of the old building thus destroyed is one of the most historic in Stamboul. In the earliest Byzantine days it was covered by the Acropolis of the new Eastern capital; later, by a palace of the Empress Placidia; later still, by another and grander imperial residence, reared by Justinian, on the ruins of which other palaces were successively built, till Mahomet II. erected that of which the structure just destroyed was the last of many restorations.

MONUMENTS AND MEMORIALS.

The Landport memorial of Admiral Sir Charles Napier, K.C.B., subscribed for by "petty and non-commissioned officers, seamen, and marines of H.M.'s navy," has just been completed by the contractor, Mr. G. P. White. The funds being limited (more shame to us as a nation, for our base treatment of the memories of our deceased naval heroes), the scale is also restricted, the total height being under 30 feet. The design, too, is very simple: the plan is triangular up to the base of the column, the site being at the junction of three streets. Ample granite steps, on which is a rustic basement, support a curvilinear pedes-

tal bearing the inscriptions. Forest of Dean and Portland stone are the materials. A column of Red Mansfield stone, 2 feet 5 inches in diameter, supports a plain foliated capital charged allusively on its four sides; and upon the abacus, which is developed into a platform, stands a lion 3½ feet in length, the paw resting upon a shot. A cartouche, in low relief, springs out of the lower or rustic portion of the shaft: within it is a medallion portrait, in bronze, by Phyffers. The inscriptions briefly point out the name and age of Sir Charles, the object of the memorial, and the names of three of his noted engagements. Messrs. Wilson & Nicholl, of London, were the architects.

The subject of a Monument to Lord Clyde has been taken up by a number of influential noblemen and gentlemen.

The foundation of the Wedgwood Memorial Institute, at Burslem, will be laid, in all probability, on the 20th of October; and the Chancellor of the Exchequer has consented to officiate, if his engagements will permit. The Lords of the Committee of Council have intimated their intention to contribute their *maximum* grant of 500*l.* in aid of the proposed building; and the execution of the first contract will be proceeded with in the course of the present month. Meantime, the requisition is being largely and influentially signed, asking the Chief Bailiff to convene a meeting for the adoption, in Burslem, of Mr. Ewart's "Free Libraries Act."

A memorial of John Hampden is to be erected at the cost of some gentlemen (among them the Lord Chief Justice Erle) who feel interested in preserving the memory of this great patriot. They have resolved to erect the monument in the field in Stoke Mandeville, in which the levy for ship-money was made which led to a contest ending in civil war. The work has been entrusted to Mr. W. W. Thompson, of Aylesbury, and consists of a stone obelisk 8 feet high, surmounted by a Maltese cross, and bearing the following inscription:—"For these lands, in Stoke Mandeville, John Hampden was assessed in twenty shillings ship-money, levied by command of the King without authority of law, the 4th of August, 1635. By resisting the claim of the King in legal strife he upheld the rights of the people under the law, and became entitled to grateful remembrance. His work on earth ended after the conflict of Chalgrove Field, the 18th of June, 1643, and he rests in Great Hampden Church."

A monument has been erected in Woodchurch churchyard, to the memory of Mr. John Smith, eldest son of Mr. John Smith, of London, the railway contractor. The memorial, which is executed in red granite (polished), is placed there by a few of his friends and fellow-labourers, as a mark of respect to his memory. The design chosen is that of a broken fluted column, resting on a panelled dais, on two sides of which inscriptions are engraven in letters of gold. Under the dais is a moulded base and plinth in red granite. The whole is about 12 feet high, and stands on a stone of large dimensions, obtained in the adjoining neighbourhood. Messrs. Burke & Co., of London, were the sculptors.

A monument to Captain Cook, the great navigator, is about to be erected in the Sandwich Islands.

Our Australian cousins—at least those of Melbourne—are preparing to do honour to the memory of Shakspeare. The *Age*, of that city, says;—"The clay model of a colossal statue of Shakspeare has been executed by Mr. Charles Summers. It is proposed to erect the statue, in bronze, in front of the Public Library."

BUILDING NEWS FROM SCOTLAND AND IRELAND.

Edinburgh.—In consequence of numerous complaints by tenants and others frequenting the Fleshmarkets, the Market Committee instructed Mr. Cousin, architect, the City Superintendent, to make an inspection of the premises with a view to remedying the existing defects. In reporting to the committee, Mr. Cousin stated that from the dilapidated state of the cranes, and their general unsuitableness to existing circumstances, he found that nothing short of their entire reconstruction would remove the evils complained of. A plan for reconstructing the markets was embodied in the report, which has been approved of by the committee, and estimates are being procured for the immediate carrying out of the work. A double set of new cranes will be erected in the centre of both the upper and lower markets, and those at present existing will be swept away. The dimensions of each of the new cranes will be 11 feet 6 inches by 100 feet 6 inches, with covered passages 7 feet in width on either side.

Kilsyth.—The new Court House and Jail, the foundation-stone of which was laid with Masonic honours on 8th August, 1862, was formally opened on the anniversary of the previous ceremony.

Keith.—The Roman Catholic Chapel at Keith is undergoing a renovation. It is being re-slated, the lath and plaster renewed, and all freshly painted. There are half a dozen new windows of the diamond quarry obscured, with marginal borders of ruby red, and corniced panes of green stained glass.

Melrose.—The new Corn Exchange which is being erected at Melrose is now nearly completed, and will be shortly opened to the public. To meet the requirements of the town, the building has been designed with the double purpose of being used as a public hall as well as a corn market.

Narraghmore, Co. Kildare.—The nave of the church here has just been rebuilt and re-opened. Some few years since, the chancel was rebuilt by private munificence, and a vestry was added about the same time; but the nave was allowed to remain in a most forlorn condition until taken in hand by the present rector. The new nave is 57 feet by 12 feet, and 30 feet to ridge, with south porch, and western bell-spirelet 60 feet high, surmounted by a gilded weathercock. The material employed is local stone with granite dressings. The style is Early English of the fourteenth century. There are three two-light windows on the south side, two on the north side, and two single lancets at the west end. The roof is of deal, stained and varnished, formed with foliated braces, plastered between the rafters, and covered with Welsh slate and terro-metallic ridge and crest. The seats are low and open, and the passages paved with Staffordshire tiles. The chancel is raised four steps, and the sanctuary an additional one. The builder was Mr. Carroll, of Dublin; and the architect, Mr. Withers. The total outlay has been about 1,200*l.*

DISTRICT SURVEYORS UNDER THE METROPOLITAN BUILDING ACT.

The Metropolitan Board of Works have lately directed their superintending architect to request the attention of the district surveyors, to the 37th section of the Metropolitan Building Act (1855), which provides that "If any building is executed, or any work done to, in, or upon, any building by or under the superintendence of any district surveyor, acting professionally or on his own private account, it shall not be lawful for such surveyor to survey any such building for the purpose of this Act, or to act as district surveyor in respect thereof or in any matter connected therewith, but it shall be his duty to give notice thereof to the said Metropolitan Board, who shall then appoint some other district surveyor to act in respect of such matter," and to inform them that the Board consider that the intention of this enactment is, that whilst the district surveyor is not precluded from exercising his profession beyond the limits of the district to which he is appointed, he is, so far as regards that district, jealously to reserve himself from any bias by which he may be influenced in the performance of his public duties.

CHURCH-BUILDING NEWS.

Down Amney.—The parish church of Down Amney has been re-opened. It has been undergoing alterations and restoration at intervals during the last ten years. During the last alteration the old porch has been restored: a deal roof for the nave has been constructed by Mr. Smith, of Highworth, builder, and the clerestory freed from whitewash, freshly pointed outside, and plastered within; and the new stalls of English oak in the chancel have been carved under Mr. Smith's superintendence. The east window is divided into compartments, representing subjects copied by Messrs. Lavers & Barraud, from the L. Ghiberti's bronze gate, at the Baptistery of Florence. The tiling of the chancel has been executed by Messrs. Maw.

Knutsford (*Cheshire*).—The district church of St. Cross, Knutsford, has been re-opened for divine service; having been closed in order to admit of alterations and improvements. The cumbrous old pulpit and reading-desk have been replaced, the former by an oak one of Gothic design, and the latter by a *prie Dieu* to match. The organ has been removed to the case made for it on the north side of the chancel, where the choir has also been provided for with oak stalls. A lectern, on a stone base, has been presented by a lady.

Cheadle Hulme (*Cheshire*).—The church of All Saints, Cheadle Hulme, has been consecrated. It is situate near the centre of the village. The style is Geometric. The nave is 25½ feet broad, and 52 feet long, divided into four bays. In the south-west corner is the porch. To the west of this is the bell-turret, rising to a height of 65 feet. The belfry is of open timber framing. The nave is lighted by six couplets of chamfered unfoliated lancets on the north and south sides, and on the west by a window of two lights, with a sex-foiled circle in the head. Just below this window stands the font, which is of Caen stone, sustained by columns with shafts of red Mansfield stone. Against the south pier of the chancel arch is the pulpit, which is chiefly of Caen stone, with shafted columns of polished Cornish serpentine. Projecting on the south side of the nave is a transept, lighted by three small lancets east and west, and by a rose window in the gable. In the west wall is a trefoil-headed door, intended chiefly for the use of the school children. The chancel is entered from the nave by a chamfered arch, sustained by corbelled columns of Mansfield stone, with carved caps and bases. The roof is of the cradle form, all the rafters being framed and braced. The floor rises one step from the nave, and the sanctuary two steps more; the communion-table standing on a foot-pace. The east window is of three lights, with traceried and foliated head. On the south are two trefoiled lancets. The choir seats are placed stallwise. The reredos has been formed by Mr. Young, of Manchester, of Minton's tiles, and contains legends and emblems. The floors are laid with red and blue Staffordshire tiles, in ornamental patterns. The sedilia are of stained deal. There is an aisle on the north side, springing from the chancel by an arch of two chamfered orders, and screened off for a vestry and organ chamber. The walls are of a cream-coloured stone, relieved by arches over windows and doors of a grey tint. The gables of the nave and chancel are surmounted by crosses. The church, which seats 300 persons, has been completed for 1,200*l.* The architect was Mr. J. M. Taylor, of Manchester; and the contractors were Messrs. Thackrah & Pierce, of Stockport.

Moreton (*Cheshire*).—Messrs. Warner & Sons wish us to state that the peal of bells for the church recently built at Moreton were cast by them. There are four bells, tenor note C about 5¾ cwt.; and although they are hung for ringing, one of Messrs. Warners' new chiming apparatus has been fixed in connexion with them.

Leeds.—The chapel for the grammar school here has been opened by the Bishop of Ripon. The chapel is a simple structure, without aisles, and with no other distinction for chancel than additional ornamentation of the walls and compartment of the roof, and raised floor with dwarf wall. It was designed by Mr. Edward Barry, who was also the architect of the school; and its prevailing style is that of the early part of the fourteenth century. The chancel is furnished with seats for the clergy and masters and for the choir, an eagle lectern in oak, and between it and the communion-table a Litany desk. The organ is placed on the right side of the chancel; and, there being no recess for it, it somewhat breaks the symmetry of the building; an arrangement not contemplated or approved of by the architect. The body of the chapel is furnished with open stalls, which, together with the seats in the choir, are calculated to hold about 300 persons. The building is lighted by four windows and a small circular light on each side east and west; by a large window with flowing tracery at the north or chancel end; and a marigold window at the south end over the entrance. For evening service the chapel is illuminated by six gas standards. The total cost of the chapel will be nearly 3,500*l.*

Mirfield (*Yorkshire*).—Bradley Church has been consecrated by the Bishop of Ripon. It is in the Early Decorated style, and consists of nave, transepts, south aisle, organ chapel on the north side, chancel, and vestry. The chancel is separated from the nave by a moulded arch with short corbelled shaft, and is furnished with choristers' oaken stalls. The nave is separated from the transept by arches with foliated shaft, and from the south aisle by a pillar of red Aberdeen granite polished and two arches. The tower is at the eastern end of the south aisle, but at present is unfinished, and the vestry is at the southern side of the chancel. The length of the church is 75 feet, the breadth 42 feet, and the height 18 feet. The eastern window is of five lights with tracery head; the centre light being higher and wider than the rest. At the west end over the entrance

door is a rose-traceried window. The south aisle windows are of three lights, with traceried heads. Arches are built in the north wall to allow of a north aisle being added when required. The roofs are all open timbered with red deal, neither stained nor varnished: over this is a coating of felt, covered with grey slates.

Redcar (Yorkshire).—A temporary church is to be erected at Saltburn-by-the-Sea. The foundation-stone has been laid by the Archbishop of York.

Knaresborough.—The tower and spire of Trinity Church, Knaresborough, have been finished, according to the design prepared by Mr. Joseph Fawcett, of Sheffield, architect. The church is in the First Middle Pointed style of architecture, and is calculated to hold 800 persons. It consists of a nave of six bays, with side aisles and north porch, and a long chancel, with vestry and organ chapel on the north side. The east window has recently been filled, as may be remembered, with stained glass, in memory of the late Prince Consort. The chancel is separated from the nave by a lofty arch: the slender columns of the nave and aisles are little or no obstruction to the sight; and the congregation, it is said, can hear very well, with comparative little exertion to the clergyman officiating. The tower, which has just been completed, stands engaged at the west end of the north aisle, the lower part forming a baptistery, opening by large arches into the church. The upper part of the tower forms a ringing loft and belfry, with large couplet windows on every side, filled with tracery. At the top of the tower there is a deep moulded cornice, with carved corbels underneath, immediately above which springs the spire, with high broaches at the angles, and four traceried spire lights. A moulded band with pierced quatrefoils relieve the surface of the spire about mid-height. There is also a gilt ornamental cross surmounting it, at the height of 160 feet from the ground. Mr. George Wilson, builder, Knaresborough, undertook the contract for completing the tower and spire at about 700*l.*, making the total cost of the church about 3,800*l.*

Tynemouth.—The Lady Chapel attached to the Priory is about to undergo a process of cleaning and renovation. The cost of the work is estimated at about 70*l.*; but it is the wish of the incumbent and churchwardens of Holy Saviour to substitute stained-glass for the present damaged windows. The repairs will be executed under the superintendence of Mr. A. M. Dunn, of Newcastle.

DISSENTING AND ROMAN CATHOLIC CHURCH BUILDING NEWS.

Lincoln.—The chief stone of the General Baptist new chapel and schools in St. Benedict's-square has been laid by Lord Teynham.

Newmarket.—The new Congregational chapel is approaching completion, and the architecture is now exposed to view by the removal of the heavy-looking wall which formerly enclosed the old Palace upon the same site. The interior of the chapel is being fitted up with sittings for between 400 and 500 persons.

Witham.—A new Wesleyan chapel is about to be erected at Totham, towards which, and the erection of a minister's house, the sum of 3,000*l.* was recently bequeathed by a lady at Coggeshall.

Washington (Durham).—The school chapel which has just been completed for the Roman Catholic body, at Washington, has been opened. The buildings are of red brick, with stone dressings. They consist of school-room, 56 feet by 26 feet; chancel, 20 feet by 20 feet, with transept, 20 feet by 15 feet. On the south side, corresponding with the north transept, stands the house for the priest and schoolmaster, containing six rooms. Externally, the appearance partakes more of the chapel than the school; and internally there is an arrangement for dividing and adapting the different parts of the building for the two purposes for which it is intended, by means of movable partitions. A turret of wood and lead, containing a gong bell, stands on the roof at the east end; and the east window has been filled with stained glass, by Mr. Barnett, of Newcastle. The whole cost was about 1,000*l.* Mr. A. Dunn, of Newcastle, was the architect, under whose directions the works have been carried out by the builder, Mr. Foggin, of Newcastle. It is in contemplation to erect other schools after the same arrangement, in the neighbourhood of Newcastle.

Thwaite.—The first stone of a new congregational chapel has been laid in the village of Thwaite, Swaledale, Yorkshire. The design and plans for the building have been furnished by Mr. Thomas Ambler, of Leeds, architect.

Newcastle-upon-Tyne.—A large United Presbyterian church, in Gresham-place (adjoining Ellison-place), which has just been completed, has been opened for divine service. Mr. George Cairns was the architect, and Mr. Hogg the builder. The interior of the church, including the gallery, is estimated to accommodate 700. Nearly the whole of the windows are of stained glass, and some of these have been presented by Mr. John Pendrick, a member of the congregation. The entire cost of the building amounts to 2,000*l.*, and of this sum about 700*l.* remain to be raised. There is a large school-room beneath the chapel.——Plans for a new church for the Baptists (Open Communion), formerly worshipping in New-court Chapel, and, since the sale of that place of worship, in the New Townhall, have been adopted by the building committee. The architect is Mr. James Cubitt, of Camberwell. The site of the building is an open space in Rye-hill, on the east side, near the Villas. The area of the ground is about 150 feet by 87 feet. The chapel will be in the Italian style. There will be three principal entrances, each of an ornamental character, approached by a flight of steps extending the whole front of the building. Four pilasters will support a cornice, surmounted by a pediment in the front elevation. Above each of the three entrances are three round-headed windows. It is intended to construct the building of stone. On the basement floor will be a lecture-room, intended also for use as a Sunday school. Contiguous to it will be infant and other class rooms. Above will be the chapel, the dimensions of which will be 81 feet by 54 feet, with a narrow gallery on three sides. At one end there will be a recess for an organ. It is estimated that the chapel will afford accommodation for 1,100 persons. The seats will be open, with bench-ends. Three vestries will adjoin the chapel.

Hexham.—The Hebbron memorial chapel, which has been erected by the late Mrs. Hebbron, widow of the Rev. Henry Hebbron, for the use of the Primitive Methodist Connexion, has been opened for divine service. It is described as partaking both of the Italian and Grecian styles of architecture, and as accommodating about 300 persons. It will admit of the addition of a spacious gallery when required. There are a school-room and vestry, and also heating-apparatus, beneath the chapel. The edifice has been built at a cost of 800*l.*, wholly defrayed by Mrs. Hebbron; the school-room, vestry, &c., at about 200*l.*, by her brothers; and the site, 350*l.* (with expenses), by the Primitive Methodist Society. The architect is Mr. Potts, of Sunderland; the joiner, Mr. Newby, of Sunderland; and the mason, Mr. Green, of Hexham.

Guernsey.—The chapel in St. Peter-port, formerly known by the name of New-street, has undergone various repairs, and has had its name changed into Béthesda (House of Mercy). The principal alteration is that a platform has been made, to the front of which a portion of the old pulpit has been added. The walls and ceiling have been whitewashed, and the remainder either painted, grained, or varnished. The front of the chapel has been also plastered, and the new name, "Béthesda," added in relief. Mr. Le Page, builder, has been the contractor.

STAINED GLASS.

St. Mary's, Whittlesey.—A stained glass window, executed by Messrs. Clayton & Bell, of London, has just been inserted over the priest's door in the Sir Harry Smith chapel in this church. The window is of three lights. The centre represents "The Crucifixion," showing the good centurion at the foot of the cross, with the holy men and women on either side. Beneath are three smaller subjects, picturing Nicodemus in counsel, Joseph of Arimathea begging our Lord's body of Pilate, and the entombment of the body. At the bottom is an inscription, stating that the window is "in dutiful love of Charles Smith, and Mary his wife, by his surviving children." The late Mr. Smith was a brother of Sir Harry, and was himself a soldier and a magistrate. The parishioners are indebted to Mr. George Moore Smith and his brother and sister for this window, and it is hoped the only remaining chapel window will soon be filled.

Eye Church.—A stained-glass window is to be put in the chancel of this church, to the memory of the late Mr. Thomas Moore and Mrs. Ann Moore. It is to be presented by Mrs. Kate Moore, of Eye (their daughter). Mr. Gibbs, of London, is to be the artist.

Penkridge Church.—At a meeting of the Hatherton Memorial Committee, since our last notice, the design sent in by Messrs. Ward & Hughes, of London, was provisionally selected, after a close competition with the other London firms. This design, with one sent in by Messrs. Lavers & Barraud, having been in the first instance chosen for further consideration; the result above mentioned, after deliberation, was arrived at. The design is described by the artist in the following terms: "In the top is our Lord sitting upon the judgment-seat, and as it were saying, 'Come unto me, all ye that are blessed.' Below are groups of angels, and in the upper parts of the side compartments are Moses with the Tables of the Law, and Elijah with the false Prophets; and below these are the four Evangelists, with their emblems; the principal subject, 'The Ascension of our Lord,' occupying the three central lights, and surrounded by the heavenly host ascending into heaven. The Apostles are grouped below beholding the ascending Saviour. The six acts of mercy, from St. Matt., 25th chapter, are introduced into the two side lights. Angels with scrolls bearing the words, 'Worthy is the Lamb that was slain,' &c.; with the acts of mercy, form as it were a framing to the picture of 'The Ascension.'" It is also intended to fill another window in this church, over the pew of the late nobleman, with stained glass, of an appropriate design, the execution of which it is proposed to entrust to Messrs. Lavers & Barraud.

Glasgow Cathedral.—Three new painted windows have been erected in this cathedral, completing the west and north aisle of the nave. They have been executed from designs by Mr. Henry Ainmiller, historical painter. The subjects of the window which completes the series on the north side of the nave are selected from the Book of Job. In the first light or division Job is represented in his hour of trial: in the second he is seen surrounded by his children and labourers bearing the rich fruits of harvest in the time of his restored prosperity. This window is the gift of the incorporation of coopers of Glasgow. The other two are couplets on either side of the western doorway. According to ancient precedent, the subjects would have been selected from the commencement and termination of human life; but these two bays of the nave no longer contain the baptismal and mortuary chapels of the old faith; and, consequently, adherence to the old system would not have been understood. Mr. C. H. Wilson proposed, on one side, two subjects illustrative of early training and education, and on the other, two subjects representing prayer and thanksgiving. These ideas have been carried out by the artist in four compositions. The windows are the gifts of Mr. George Crauford, and of Mrs. S. Dalglish. There are only six windows now to be completed, and these are in progress, and will be finished this year if nothing occur to interrupt the artists. They are the gifts of the Duke of Montrose, Lord Belhaven, Mr. Richardson, of Ralston, and his brother Mr. David Richardson, of Hartfield; Col. Carrick Buchanan, of Drumpeller; Sir Andrew Orr, and Sir Michael Shaw Stewart, Bart. We understand that Lord Lyon King at Arms has taken exception to some of the coats of arms in the windows already erected, and is desirous that they may be corrected, and that the laws of the country may be adhered to. His powers, as sanctioned by successive Parliaments, are ample, but the Lyon Court acts in a conciliatory manner. Five windows in the clerestory have been subscribed for. The windows of the clerestory of the nave are couplets, twenty-three in number, measuring 37 square feet each. The transepts contain four triplet windows, each measuring 60 square feet; the choir eight triplet windows, measuring 47 square feet each, and four lancets, each 25 square feet. The couplets in the nave may each contain two figures nearly the size of life; the triplets in the transepts and choir, one figure each of the same proportion, placed in the centre lights, the side lights being too narrow for figures. The lancets in the choir may contain one figure each. The new series will therefore comprise eighty figures. It is proposed to represent in the windows of the nave the ancestors of our Saviour, as set forth in the first chapter of St. Matthew, with figures of angels at intervals bearing texts; and in the transept, Zacharia and Elizabeth, Simeon and Anna, further developing the idea prevalent in the great south window, illustrative of the connexion between the Old and New Testaments. In the choir, it is proposed that the windows should contain figures of women, mentioned, in the New Testament, as examples of piety, devotedness, charity, and other Christian virtues. The Commissioner of Works has seen the plan for filling the clerestory windows with painted glass, ap-

proves of this plan, and authorises the committee to give publicity to the scheme. The Commissioner, according to our authority, the *Scotsman*, has restored the statue which was exhibited by the wardens as St. Mungo, to its original place at the east end of the crypt, over the now empty tomb which not long ago was plundered by profane hands of the bones, pastoral staff, and ring of the bishop whom the statue represents.

PROVINCIAL NEWS.

Chatham. — The extensive buildings which Messrs. Matthews & Son, of Dover, the Government contractors, are engaged in erecting on that end of the inner lines nearest to the Royal Engineer Barracks, Brompton, and which are intended as a gymnasium for the use of the troops stationed at this garrison, are now being roofed in, and will, doubtless, be completed in the course of a few weeks. The contract for the building was 3,000*l.* The place will be fitted in the most complete manner possible for different kinds of athletic sports, which are fortunately now in high favour with the men of the army.——In consequence of the Admiralty requiring the whole of the land at and near St. Mary's Creek, for the extension of Chatham dockyard, it has been found necessary to remove the Royal Engineer pontoon depôt to the opposite side of Chatham harbour, near Upnor Castle, where a suitable portion of the river has been selected to be formed into a pontoon-hard. Already the principal portion of the Royal Engineers' stores, boats, pontoons, &c., have been transported across the harbour to the new depôt, where the Royal Engineers, who are assisted in the undertaking by a party of convicts to perform the heavy portions of the work, are engaged in constructing a large building in which all the stores and *matériel* for pontooning and engineering operations will be deposited.

Chippenham. — The new temperance-hall at Chippenham has been opened. It has been erected at a cost of 1,200*l.*

Leeds.—A contract has been entered into with Messrs. J. & W. Beanland, of Bradford, according to the local *Intelligencer*, for the building of the new Infirmary. The sum agreed upon is 64,750*l.* Messrs. Beanland are the contractors at present engaged in rebuilding the dilapidated portions of Chichester Cathedral, and they carried out all the work at All Souls' Church, Halifax, as also at Sir F. Crossley's new congregational chapel. Mr. Scott, as our readers know, is the architect of the infirmary.——The new Corn-exchange, designed, in the form of a Roman theatre, by Mr. Broderick, has now been opened. The cost of its erection has been upwards of 25,000*l.*

Great Horton.—The new stores, erected by the Great Horton Industrial Self-help Society, have been formally opened. The building, which is situate opposite the Four Ashes Inn, is four stories high, including the basement, which extends over the whole area covered by the building. The ground floor is divided into grocer's, draper's, and butcher's shops, which have a front of plate-glass windows divided by stone columns having carved capitals. The first floor is used for store-rooms and show-rooms, for grocer's and draper's departments, and milliners' and tailors' work-rooms. This story is lighted by two-light windows with pointed and carved arched heads. The music-hall is on the top story—63 feet long, 32 feet wide, and 20 feet high—and will accommodate about 700 people. At one end of the hall is a platform and orchestra, large enough to seat about a hundred persons. There are two ante-rooms adjoining the hall, on the same level, being built over one of the houses (there being two in connexion with the institute). The whole of the building is heated with hot water. The want of a public room has long been felt in Great Horton. The cost is about 2,300*l.* Mr. Hope, of Bradford, was the architect. The style of architecture is Venetian Gothic.

THE SUSSEX ARCHÆOLOGICAL SOCIETY AT BRAMBER.

Bramber, with the adjoining districts, was lately the scene of the annual summer meeting of the Sussex Archæological Society. Mr. M. H. Bloxam, F.S.A., acted as cicerone to the party. The first place visited was the Church of St. Nicholas and St. Mary the Virgin. The company having assembled within the walls of the sacred edifice, Mr. Bloxam proceeded to explain its architectural features, and remarked that the five churches they were to visit that day were all connected with monasteries abroad. The churches of Old Shoreham, New Shoreham, Bramber, and Beeding, were appendages of the Abbey of St. Florence, at Salmur; and that of Steyning was an alien cell of the Abbey of Fecamp, in Normandy.

Old Shoreham Church.

The Church of St. Nicholas, at Old Shoreham, Mr. Bloxam stated, was mentioned in "Domesday Book." The present structure recently restored was of the latter part of the twelfth century, about A.D. 1180. Perhaps some portion of the earlier church might exist in the masonry in the north-west wall of the nave, which is apparently older than that elsewhere. This church was given by Wm. de Braose, A.D. 1075, to the Abbey of Florence towards their establishment at Sele.

New Shoreham Church.

In describing the church of New Shoreham, Mr. Bloxam said:—This church was probably founded by Philip de Braose, the second Lord of Bramber, about the year 1100. If any traces of the original church existed, they would consist of the under part of the tower. The two upper stages, the transepts, and the demolished nave and aisle, were Late Norman, probably erected about 1180. The chancel, with its aisles vaulted with stone, appears to have been erected in the thirteenth century, probably by the monks of St. Florence, but at the cost of the worthy burghers of New Shoreham. The north wall of the north aisle of the chancel was Norman, broken through for the introduction of decorated windows of the fourteenth century. The nave, with its aisles, appeared to have been destroyed in the fifteenth century, when, on account of the encroachment of the sea, New Shoreham had become decayed, and had petitioned for a remission of taxation. It was then, as Mr. Bloxam inferred, that the nave was taken down, to avoid the expense of reparation. At the same time, the easternmost bay of the nave was built up between the arches, and a semi-Norman doorway taken from the west end of the nave or one of the side aisles, introduced with a perpendicular window over. Windows in the style of the fifteenth century were introduced in the wall of the south side of the chancel. Mr. Bloxam pointed out various other interesting particulars in this structure.

Bramber Church

was next visited. It is a small edifice, considerably curtailed of its original proportions. It consisted of a nave, central tower, transept, and chancel. Of these the nave and tower alone remain, exhibiting features of Norman work.

Steyning Church.

Under the same direction a large party visited this church, which is dedicated to St. Andrew, and was, as Mr. Bloxam observed, the fragment of a fine conventual church, of which little more than a portion of the nave and aisles now remains, the choir having been demolished on the general suppression. There was a Saxon church on the same site, of which there are no remains. It belonged, as an alien cell, to the Benedictine Abbey, at Fecamp, in Normandy. As an alien cell it was suppressed in 1461, and transferred to the abbey of Sion. The enriched arches on each side the nave were pointed out in detail by Mr. Bloxam to the party who accompanied him; and he showed that these enriched arches were subsequently worked out of plain block masonry. Some of the details, he pointed out, were of the thirteenth century. Two piers of the central tower exist, but the choir and transepts have been demolished; and there are no traces of the conventual buildings which were on the north side of the church. With the exception of a little ornamental detail on the hoods of the arches on the north side, no traces of Early English or Decorated work are perceptible; windows of the fifteenth century have been inserted in the walls of both aisles, probably by the monastery of Sion. The tower appeared to have been erected about the middle of the sixteenth century, A.D. 1550. The external appearance of the clerestory on the south side was richer than that on the north, being more open to ocular observation.

Beeding Priory.

This place was visited under the superintendence of the Rev. Dr. Bloxam, the vicar. The church of St. Peter has nave, chancel, and south aisle, and a tower with three bells. It was formerly the church to the priory of Sele, an alien cell to the monastery of Salmur. The priory remains were taken down about eighty years ago, when the present house was erected. In the lawn behind the house, foundations of the conventual buildings have been traced. The church, though neat, retains no ancient features worthy of remark, having undergone reparation within the last few years, long previous to which the chancel had been considerably abridged in length. The party also visited Bramber Castle, where Mr. W. Durrant Cooper, F.S.A., gave an interesting account of the castle and of the towns of Shoreham and Steyning. The party afterwards met at dinner in Bramber Castle, and then took their departure by special train, kindly provided by the railway company. The proceedings of the day were altogether pleasing and interesting.

REGULATION OF LONDON STREET IMPROVEMENTS BY THE METROPOLITAN BOARD OF WORKS.

The Metropolis Local Management Act of 1855, section 202, enabled the Metropolitan Board from time to time to make, alter, and repeal bye-laws, for regulating the plans, level, width, surface, inclination, and the material of the pavement and roadway of new streets and roads, and the plans and level of sites for building. This power was exercised in 1856 and 1857, so far as related to the plans, width, formation and surface inclination of new streets. The latter bye-law has regulated these matters since 1st May, 1857, and imposes, with the approval of the Secretary of State, a penalty of 40*s.* for each offence, and for a continuing offence after notice thereof from the Metropolitan Board of Works, a further penalty of 20*s.* for each day. The provisions are, that four weeks at least before any new street shall be laid out, written notice and plans are to be sent to the Metropolitan Board of Works. A width of 40 feet, at the least, is required for carriage traffic, and 20 feet for foot traffic, exclusive, in each case, of any gardens, fore-courts, open areas, or other spaces in front of intended houses. Rules are also given for measuring the width of new streets; the curve of the carriage-way; the height of the curb to the foot-paths, and the slope of the foot-path. By the Amending Act of 1862, further legislation is applied to the same subject in sections 98 and 99; and the bye-law is extended to certain existing roads, passages, and ways, when to be formed or laid out for building as a street. An extended meaning is also given by sec. 112 to the term "new street" so as to include mews, and any street not taken into charge by the local authorities prior to 7th August, 1862. Several hundreds of new streets have received the approval of the Board under the provisions of the bye-law, yet many of these may be imperfectly laid out, and many builders form and build streets under pretended ignorance, or in open defiance of the law.

For the purpose of checking such irregularities, and securing proper observance of the requirements for the formation of new streets, the Board have deemed it proper to appoint an officer to assist them in this matter, and the superintending architect has been directed to inform clerks of vestries and district boards, that it would greatly promote the object referred to, if they would communicate any information regarding the laying out or formation of new streets contrary to the orders of the Board, or without their knowledge. The detection of any such irregular proceedings is facilitated by means of the copy of the drawing which is sent to the vestry or district board whenever applications are made for approval of new streets.

THE METROPOLITAN BUILDING ACT.

BUILDINGS IN BACK YARDS.

The Metropolitan Board of Works have lately considered a complaint relative to the erection of buildings in the back-yards of dwelling-houses, originally intended for wash-houses, but afterwards used as dwellings by tenants for the day or week, and accessible from the houses adjoining. The circumstances were such as to preclude a remedy, by reason of the lapse of time; and the superintending architect has therefore been directed by the Board to address a circular on the subject to district surveyors.

This circular remarks that the Building Act gives full powers to the district surveyor to require notice of all works, and full particulars of their nature; and that if works are begun without notice, or if preparations for the operations are indicated, he may enter premises for the purposes of the Act. It is, therefore, considered to be the duty of the surveyor to stop every irregular work, and to have it demolished, if need be, in due

course of law; or if buildings are proceeding without proper means of access by streets or ways, immediate notice should be given to the Board, or other authority having power in the matter.

Difficulties frequently arise under the 29th section as to the application of the rule to back areas or yards of very limited extent, where some small office-building is required for the convenience of inhabitants, or where premises originally constructed for dwelling-houses are afterwards converted into shops on the ground story, and extensions are wanted in the rear. In these cases, crowding of dwellings is increased, as well as danger from fire to adjoining premises; and under such circumstances much care is required on the part of the district surveyor to cause the observance of the Act where the light and air to back windows are interfered with, and the full dimensions of area diminished. Covering over yards on the ground story for back shops, and lighted with lantern lights, could only be effected where there was no sunk story, or on the blocking up of any windows in that story.

The Board deem it essential that there should be a strict observance of the rules in regard to these matters.

GAS.

A Parliamentary return has been issued, showing the actual state and condition of each metropolitan gas company, and the dividend for the year 1862. It appears that the following dividends were paid:—The Chartered paid dividends at the rate of 9 and 10 per cent., including back dividends at 1 per cent. per annum for the half-year to Christmas, 1856; the City of London dividends at 9 and 4 per cent., with a balance of 658*l.*; the Commercial, 30,513*l.*, on a capital stock of 322,195*l.* (less sums remaining outstanding). The capital account is said to "include calls in course of payment;" but the rate of dividend is not stated. The Equitable paid dividends at the rate of 11, 14½, 14, and 10 per cent. (less sums remaining outstanding), with a balance of 396*l.*; the Great Central dividends at the rate of 6 and 8 per cent. (less sums remaining outstanding), with a balance of 18,445*l.*; the Imperial at the rate of 10 per cent., with a balance of 58,500*l.*; the Independent at the rate of 10 per cent., with one year's back dividend (1,500*l.*), and a balance of 3,548*l.* The London paid 36,827*l.* on 548,843*l.* (less sums remaining outstanding), but the rate is not stated. The Phœnix dividend was 10 per cent., with 8,190*l.* dividend arrears for 1856, with a balance of 930*l.* The Ratcliff dividend was 8*l.* 15s. per cent., without a balance; the South Metropolitan, 10 per cent., with a balance of 10,369*l.*; the Surrey Consumers, 10 per cent, with a balance of 4,047*l.*; and the Western 10 per cent., with 3,285*l.* "towards back dividends of less than 10 per cent."

Books Received.

Sussex Archæological Collections, relating to the History and Antiquities of the County. Published by the Sussex Archæological Society. Vol. xv. [vol. iii. of Second Series]. Sussex: G. P. Bacon, Lewes. 1863.

This volume of the Sussex Archæological Collections is a good one. It contains a long and interesting paper on "Poynings," by the Rev. T. A. Holland, M.A., rector, illustrated by a dozen engravings, and one on "Monumental Inscriptions at Poynings," by the same gentleman; a paper on "The Rivers of Sussex (Part I.) Eastern Division," by M. A. Lower, M.A.; and papers on various other subjects; among which are "The Priory of Boxgrove," by the Rev. E. Turner, M.A.; "Old Acts of Parliament relating to Roads in Sussex," by J. G. Dodson, M.P.; "The Merchant Guild of Saint George, at Chichester," by the Rev. E. Turner; and "The Services of the Barons of the Cinque Ports at Coronations," by T. Ross, with a coloured portrait. One of the best points in the volume however, is a series of Notes and Queries at the end, on various archæological or antiquarian subjects; and another is "Topographica Sussexiana,"—a "modest attempt towards forming a list of the various publications relating to the county of Sussex. By G. S. Butler, F.S.A." Whether complete or not, this last is a valuable contribution to the history and archæology of the county. The volume, moreover, is wound up with a useful index.

Miscellanea.

Royal Princess's Theatre. — Mr. Walter Montgomery opened his house on Saturday last, with an efficient company, for a series of Shaksperian plays. His personation of *Shylock* convinced all who saw it, of his claim to rank as a superior actor; and that of *Lavater*, in "Not a Bad Judge," must be held to have thoroughly established his position on the London stage.

The Constantinople Exhibition.—The collection of works of art and manufacture now closed, has left a heavy balance on the wrong side of the account. The total cost of the building and its subsequent administration, amounted to 2,000,000 piastres, against which, the realised receipts are only 450,000 piastres. The deficit of more than 14,000*l.* will, it is said, be made good to the company by the Sultan.

The British Association.—So early as Saturday forenoon last, no fewer than 1,500 associates had been enrolled for the meeting at Newcastle, from Wednesday, the 26th of August, to Thursday, the 2nd of September. Each associate pays 1*l.*; and it was anticipated that at least 2,000 would attend ere the meeting closed; but even before it opened the number was 2,087. There are some interesting excursions amongst the arrangements, as, to Crag Lough and the Roman Wall; to the duke of Northumberland's at Kielder; to the Allenhead lead mines, and the Yorkshire iron mines at Cleveland; and to Sunderland and its glassworks, manufactories, and ship-building yards, Wear bridge, and docks, life-boat establishment, &c. There will be an industrial and art exhibition and a *soirée* in the Central Exchange News-rooms at Newcastle. The Newcastle people appear to have made great preparations in the way of putting the town in order by painting and decoration for the occasion; and the meeting opens under much more favourable auspices than were anticipated from the season chosen. At the Cambridge meeting, 60 members only were registered, instead of 1,500 as at Newcastle, four days previous to the time appointed for the opening of the congress. On Wednesday Sir William Armstrong, the president, delivered the inaugural address at the town hall. It was an interesting *resumé* of the scientific results of the year, and was most favourably received.

Windsor Park: and the Forest.—Messrs. Longman & Co. have announced as preparing for publication, an elaborate work on "The History of Windsor Great Park and Windsor Forest," by Mr. William Menzies, Resident Deputy Surveyor; to be illustrated with photographs by the Earl of Caithness, and by Mr. Bambridge, of Windsor. The purpose is to give an account of the park and forest, which shall be not only interesting, but also of practical utility to persons engaged in the management of timber. The several plantations will be described, and their history traced with an exactness which would probably be impossible of attainment for any other estate in England. The researches, which have furnished accurate data for the prospective valuation of growing timber, were conducted in the chief libraries, and in the Land Revenue Record Office. Thus, a series of plantations from the time of Queen Elizabeth to the present day, have been identified, and measured; and the age and size of each, with their contents and numbers per acre, will be given in a tabular form,—a large map being annexed. The researches into the purely arboricultural history of Windsor, were materially aided by Lord Macaulay; and many curious and interesting facts, hitherto unknown, illustrating the history of the picturesque old pollards, were brought to light. The establishment of Norfolk and Flemish farms under George III., which gave a great impulse to the improving of farming land in the raising of green crops, draining, liming, and keeping clean; the report made by Mr. Kent to the king, on a system of grazing by a mixed stock of deer, cattle, and horses,—a system which experience has shown to be the best; the definition of property, and the settlement of complicated rights previous to the disafforesting or inclosing of Windsor Forest; and other matters of history and experience, will be treated. An account will be given of the geology of the Great Park, interesting and important as leading to a knowledge of the water-bearing strata, and of the probable capacity of the ground for yielding a supply; in preparing which the author was aided by Mr. Waterhouse, of the British Museum. He has also spoken of the great stones resembling those of Stonehenge, which are found in Bagshot sands.

Our Lists of Tenders.—Several architects write, drawing attention to cases in which they have had the management of the business, and which show that greater uniformity is attainable than would be supposed from what is the character of a great number of our lists.

The Use of the Pen.—The Latin rhetorician, Quintilian, declares that the pen is the best instructor in the art of speaking. Not less true is it that the use of the pen conduces most effectually to the general culture of the mind. There is more real exercise of thought in one hour's composing than in a day's reading. Besides, the pen compels you to understand what you study, for you cannot express what is not intelligible to yourself. The pen also exacts arrangement and introduces order. Indeed, what we read is hardly our own until we have given it utterance in our own language.

The Nelson Column.—Sir Edwin Landseer is reported to have at length completed the model of his design for one of the lions to be placed at the base of the Nelson column, in Trafalgar-square. The design is said to be as masterly a work as the world would expect a lion of his on canvas to be; and a slight variation in treatment will enable the artist to adapt this one design to his four pedestals. The complete statue is not much above the size of a full-grown lion as known in confinement, and probably it is not a bit larger than a magnificent specimen in the natural state. The actual lions of the monument will be considerably larger.

Billingsgate Market.—Complaints are made of the sanitary state of Billingsgate, which, judging from what we saw when last visiting the place, are not without foundation. Bordering the river Thames, with a steam-engine to pump up water more speedily than hands can use it, as remarked by a writer in the *Morning Post*, no excuse can palliate the offensiveness at times. During warm weather particularly, more labour, care, and attention ought to be bestowed on scrubbing, scraping, and washing. Most of the paint is off, for several feet from the floors; and all above-head looks dull and dingy.

Japanese Houses.—Yokohama is a considerable town of 80,000 inhabitants. The Japanese houses are rarely more than one story, and most consist of two rooms, a front and a back. Built of bamboo and mud, and rarely of stone, they are always painted nicely outside, or varnished, and generally kept very clean. All ornamentation is eschewed except on the roof, which is generally edged with chequered tiles. Wherever it can be afforded, a small garden, with dwarfed trees, is sure to be in good condition; and almost in every room you see vases with flowers or dwarfed trees growing in them. The floors are carpeted with a very even kind of matting, laid in stripes a yard wide, the edge bound in black, so as to make an agreeable "parqueterie," and it is always kept very clean, even by the poorest classes. They take off their shoes before entering a house, leaving them outside the entrance, and look as jealous at your boots when you enter, as any English lady could, proud of a new drawing-room carpet. They never sit on chairs or stools, but squat down on the floor with their feet underneath, so that they appear to sit on their heels.

The International Statistical Congress.—This congress will meet in Berlin in the coming month. Certain politicians, ignorant of the real importance of the congress, have opened a warfare against all supporters of it, but the outcry has failed to produce any effect. The Government has taken no notice of the cry: on the contrary, it has adopted the best measures possible to meet the requirements of the occasion. A committee has been appointed -without regard to politics - to make arrangements. A letter from Berlin says, that all who attend the congress will meet with the most cordial and hearty welcome, and that Prussia knows well what is due to a body of men who may well pride themselves by boasting of the honour that their last meeting was presided over by that illustrious and distinguished Prince for whom, alas! the world must mourn so early. The order of the day will closely conform to the resolutions of the last congress, and Dr. Engel, the director of the Prussian Statistical Bureau, has compiled a report, in which he reviews the proceedings of the former congresses, and suggests material for discussion. He has also prepared a draught of statutes. The last meeting at London was attended by no less than 485 English members. The order of the day this year, will be to a great extent a continuation of that of 1860.

A Norse Warrior's Remains in Orkney.—Another archæological discovery of some interest has been made by Mr. Farrer, M.P., in Orkney. Fragments of corroded or oxidized iron armour, and of mouldering human and horse's bones, have been discovered under sand on the Links east of Pierowall, in Westray; leading to the conclusion that they must have belonged to a mailed Norse warrior and his horse. There is still a tradition in Westray, of a battle between the natives and the Norsemen on the spot where the remains were found.

Geological History of the British Isles.—Sir Roderick Murchison believes, first, that the eastern shores of Great Britain, where Cæsar landed, have not changed their relation to the sea-level since that period; secondly, from finding remains and bones of the same species of extinct mammalia in the gravel of Britain and the continent, that, it is proved that, at a comparatively recent period, our islands were united with France; and, thirdly, from the skeletons of the great Irish elk, which are found in the bottom of the bogs in Ireland, and also in the Isle of Man and in Cheshire, that when that creature lived, these three islands must have been united.

Proposed Hotel: Grimsby.—A company has been formed for building an hotel and newsroom contiguous to the Royal Dock and Railway Station at Great Grimsby. The want has been long felt; and it becomes more urgent as the portion of town near the railway increases. Considerable inconvenience at present results from the distance to a suitable hotel. The capital, fixed at 5,000*l.*, is considered sufficient to provide a suitable building for the present; but in the plans, it is intended to provide for extension, when required, without altering the foundations. The Manchester, Sheffield, and Lincolnshire Railway Company have agreed to grant a lease in perpetuity of an eligible site at a low rent, and to lease to the company for a term of years, the exclusive right to sell refreshments at the docks. Mr. M. E. Hadfield, of Sheffield, is the architect.

Accident at Blackfriars Bridge.—Travelling cranes are of course in use for carrying the materials for the London, Chatham, and Dover Railway bridge along the line of operations, and especially for lifting the masses of granite which are being used in the structure. One of these travellers, on Saturday last, appears to have left the pier No. 2 to cross to pier No. 3, when one of the beams on which it ran broke in two, and nearly short off by the pier, the other beams instantly snapping also; and the traveller crashed down upon some coal-barges that were passing under the works at the time with a strong flood tide. Some seven men fell with the broken beams and machinery into the Thames, and one of them was drowned. The traveller was thereafter brought up from the bottom of the river, and everything prepared for carrying on the work again. There were four timbers thrown across; and, as usual, no reason, it is said, can be given for their breaking, as all the timbers are recovered, and have been critically examined, and no flaw can be traced in them that could possibly lead to such a mishap. It is to be hoped, however, that the cause will be found out, so as to prevent such accidents in future.

Electro-Telegraphic.—The *Assaye* and *Kirkham*, sailing vessels, have been shipping from the works of Messrs. Henley, North Woolwich, 560 miles of the Indian submarine electro-telegraphic cable manufactured by that firm. Sir Charles Bright and Mr. Latimer Clark, the engineers superintending the manufacture of the cable, have a staff of electricians at Woolwich to test each portion of the work as it progresses. The cable is coiled in large iron water-tight tanks—three on board each ship—and which will be kept full of water throughout the voyage to Bombay. The *Tweed* and *Cospatrick* are being fitted out at the premises of Messrs. Wigram, of Poplar, under the superintendence of Captain Dixey, for the reception of 550 miles of the cable; and the *Charente*, a screw-steamer of 600 tons, is being prepared by the same firm for permanent employment on the line; and she will take out all requisites for repairing it hereafter, should any accident arise from ships' anchors, &c. The total length of the cable taken out will amount to 1,250 miles, weighing upwards of 5,000 tons. The operation of laying down the entire line will be under the chief superintendence of Lieutenant-Colonel P. Stewart, Royal Engineers; and it is confidently hoped that the work will be completed in February next, and that by March, 1864, London and Calcutta will be in direct telegraphic communication.

The Fleet Sewer.—The difference between the Metropolitan Board of Works and the Metropolitan Railway Company, as to which party is liable for the expenses incurred by the bursting of the Fleet Sewer, is about to be settled under the provisions of the Lands' Clauses Consolidation Act.

Cement for Steam Joints, &c.—Plumbago has recently been introduced as the basis of a cement for steam-joints, and the general metallic connections of the engineer. It is composed of six parts of plumbago, three of slacked lime, eight of sulphate of baryta, and three of boiled linseed oil. This compound, it is said, secures a perfectly air and steam tight joint, much superior to that obtained by the use of red lead.

The Local Improvements under Public Works Act.—The whole of the money, 1,500,000*l.*, will be taken up in Lancashire, and will be used; and Government may be asked for a further grant next year if required. The Mayor of Manchester, at the meeting of the Central Relief Fund on the 24th instant, said that in all probability that town would make application for 100,000*l.* The corporation were most anxious to follow out the intentions of Parliament, and assist in finding employment for the distressed population. At the same meeting, Mr. Rawlinson reported applications from Ashton, Denton, Bollington, and Bolton, to the aggregate amount of nearly 200,000*l.*, in addition to amounts previously reported in connexion with other places.

The Proposed New Borough Market Hall and Fish Market, Derby.—The members of the Market Committee met last week, to examine the tenders for the works required in the construction of the Market Hall and Fish Market for the borough. The list will be found in the usual place in our number. An excess upon the first estimate is attributed to additions which have been made to the original plan, in the shape of towers at the angles, fittings, water supply, and pipes, as well as to a considerable advance which has taken place in the cost of materials, especially wrought-iron; and partly to the intention of the committee to reserve the bulk of the old materials, more particularly the iron columns, roofs, and fittings, with a view to the conversion, should it be approved, of the present butter market into a hide and skin market in the Holmes, and a portion of the existing general market as a covering to the open vegetable market in the Morledge. The works have been tendered for under a specification prepared by Mr. Thorburn, the borough surveyor, with the approval of Mr. Stevens, the architect.

The Aristocracy and Labour.—The *Penny Newsman* in the course of a readable article thus headed, wherein instances are recorded of members of the nobility having devoted themselves to handicrafts, or to mercantile pursuits, alludes to the "first-rate talents" of the Earl of Lovelace, "in the design and execution of common brick-work and masonry," and invites the attention of the conductor of this journal, as representing the building trades, to the new village inn and school at Ripley, Surrey (not to speak of the mansion), as not being easy to match for elegance of design, and execution with common materials. The *Newsman* says, that the Earl was his own clerk of the works, and showed what superior construction may be achieved, under competent direction, by village artisans and labourers, and that were he to give himself to the building trade, few in England might be found to match him. His eldest son, the late Lord Ockham, the grandson of Byron, the poet, being impatient of barren routine life, and having a great respect for work, as work, and for handicraft, dropped his title, took to iron shipbuilding, and bound himself to Mr. Scott Russell, and worked as an artizan, until he contracted the disease by which his life and mechanical career were cut short. The excellent young nobleman carried his zeal almost to a monomania. He declared it to be his ambition to rise by his skill, and to have a great establishment, headed "Lord Ockham and Co., shipbuilders, Millwall."

TENDERS.

For a house and shop, Heigh-street, Peckham:—

Sowden	£946 0 0
Thompson	888 0 0
Habbs	880 0 0
Hampton & Brown	873 0 0

We are compelled to decline pointing out books, and giving addresses.

All statements of facts, lists of tenders, &c., must be accompanied by the name and address of the sender; not necessarily for publication.

Advertisements cannot be received for the current week's issue later than **FIVE o'clock, p.m.,** *on Thursday.*

NOTE.—*The responsibility of signed articles, and papers read at public meetings, rests, of course, with the authors.*

THE *Morning Post*, September 29, speaking of Benson's Watches in the Exhibition, says :—"The collection of watches shown by Mr. Benson is a large, and at the same time an interesting one, and considerable attention has been paid by the exhibitor to the decoration of the cases. Many of them are extremely elegant in the design, and were the results of prizes offered by Mr. Benson to the pupils of the South Kensington School of Design." Chronometer, duplex, lever, horizontal, repeaters, centre seconds, keyless, split seconds, and every description of watch, from the plainest to the highest quality of which the art is at present capable, adapted to all climates. Benson's Illustrated Pamphlet on Watches (free by post for two stamps) contains a short history of watch-making, with descriptions and prices. It acts as a guide in the purchase of a watch, and enables those who live in Scotland, Ireland, Wales, the colonies, India, or any part of the world, to select a watch, and have it sent free and safe by post.—J. W. Benson, Prize Medallist, Class 33 and 34, Ludgate-hill, London. Established 1749.—[Advt.]

ADVERTISEMENTS.

The Publisher cannot be responsible for ORIGINAL TESTIMONIALS *left at the Office in reply to advertisements, and strongly recommends that* COPIES ONLY *should be sent.*

MR. J. H. LEONARD,

ARCHITECTURAL DRAUGHTSMAN,
ARTISTIC COLORIST, AND LITHOGRAPHER.
Removed from 21, Montague-street, Russell-square, to 28, TORRINGTON-SQUARE, W.C.

NOTICE.—Mr. EDWARD HARRIS, son of the late Mr William Harris, of 55, Park-street, Grosvenor-square, Architect, having entered into Partnership with Mr. JOHN T. LEPARD, of No. 9, Cloak-lane, City, Architect and Surveyor, the BUSINESS of his late father will henceforth be CONDUCTED by them at DRUMMOND'S CHAMBERS, No. 10, John street, Adelphi; and No. 9, Cloak-lane, City.

TO CIVIL ENGINEERS AND ENGINEERING SURVEYORS.

PARNERSHIP WANTED, to join immediately, a thoroughly qualified man, possessing capital of £500 to £1,000, as immediate command.—Address, real name and references, or testimonials, &c. to C. E. Post-office, St John's-hill, New Wandsworth.

RAILWAYS for NEXT SESSION.—An experienced Engineer and Surveyor is prepared to CONTRACT for TRIAL, PARLIAMENTARY, or PERMANENT SURVEYS, LEVELS, SETTING OUT, &c. Address, A. B. 18, College street, Westminster.

AS PUPIL.—An Architect and Surveyor in the City has a VACANCY in his office for a PUPIL. Premium a secondary consideration.—Address, X. Y. Z. care of Housekeeper, No. 2, Adelaide-place, London-bridge.

AN ARCHITECT and SURVEYOR, in the country, holding two public appointments, is willing to take an OUT-DOOR PUPIL. The youth selected will not be kept entirely to office work, but will have every opportunity of inspecting buildings and other works in every stage of progress, and also of assisting in measuring up work, making valuations, &c.—Address, J. B. G. Post-office, Blandford.

BUILDER'S CLERK.—WANTED, an experienced Man, fully competent to make out finished bills. Used to estimating and taking out quantities would be preferred.—Address, stating previous engagement, age, and salary required, to A. S. Office of "The Builder."

CONTRACTORS or BUILDERS REQUIRED, willing to expend or risk a moderate amount with the view to Contracts by private arrangement for works of from 10,000*l.* to 30,000*l.* Address, with full particulars, C. E. Post office, Millbank-street, Westminster.

COUNTY of CARDIGAN.—The Office of BRIDGE SURVEYOR for the County of Cardigan, having become VACANT, the APPOINTMENT will be FILLED UP at the ensuing Michaelmas Quarter Sessions, at a salary of 30*l.* per annum. Candidates are requested to send in written applications, stating age, qualifications, &c. and accompanied by testimonials, to Mr. F. R. ROBERTS, the Clerk of the Peace, at Aberystwyth, on or before the 1st day of SEPTEMBER next. The Surveyor will be required to reside in the county.—Dated this 4th day of August, 1863.

WANTED, in a Builder's Office, a JUNIOR CLERK, accustomed to prime cost and cash accounts.—Apply, by letter only, to W. H. 15 Wharf, Macclesfield-street North, City-road Basin, N.

WANTED, a FOREMAN, to superintend the erection of a small Gothic church at Turnham-green. None need apply who cannot give references to the architect and builder of a Gothic job.—Address, stating references and salary expected, to J. M. 11, Lonsdale-place, Kensington, W.

TO MASONS.

WANTED, TEN or TWELVE good MASONS, at Odd Rode Church, near Mow Cop Station, Cheshire. Wages, 4*s.* 6*d.*—JOHN GALLIMORE, Contractor, Newcastle under Lyne.

WANTED, an INSPECTOR for NEW DOCK WORKS. He must be a practical Mason, accustomed to sea works, coffer-dams, &c. A testimonial from a civil engineer of standing is necessary. Salary at the rate of 200*l.* per annum.—Apply to G. K. Post-office, Newcastle-on-Tyne.

TO BUILDERS' FOREMEN.

WANTED, immediately, a WORKING FOREMAN, to take charge of a Job, a Joiner by trade Must be a steady man, thoroughly competent to make working drawings, set out work, measure up, keep time, &c.—Address, stating where last employed, age, wages required, &c. to S. L. Post-office, Grafton-road, Kentish town, N.W.

WANTED, in a Builder's Office, a thoroughly competent MEASURING and ESTIMATING CLERK.—Apply, by letter only, stating age, where last employed, and salary required, to W. H. 15, Wharf, Macclesfield-street North, City-road Basin, N.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter from SIR RAYMOND JARVIS, Bart. VENTNOR, ISLE of WIGHT.—"Second Week Month."—"March 10th, 1858.—In reply to your letter received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state with much satisfaction, it answers perfectly. Many leakers and other pumps have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B. From this statement it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

The proprietor will undertake the formation of the roads, drainage, &c. Ground-rents will be accepted. The land lies sheltered from the north-east. It is dry, elevated, and commands the very finest views of Archenfield and the Welsh mountains, the Wye valley itself forming the foreground. Distance from the church and the railway station a quarter of a mile.—Address, Mr. SAMUEL R. DAVIES, Ross, Herefordshire; or Mr. THOMAS FLEWETT, Surveyor, Worcester.

SUTTON, near the Station.—PLOTS of
FREEHOLD BUILDING LAND FOR SALE. Land-tax redeemed, conveyance free. Also, PLOTS TO BE LET on a Building Lease, for ninety-nine years.—For plans, &c. apply by post, pre-paid, to Mr. TRIBE, Builder, Sutton, Surrey, S.

LAND, situate on Bromley-hill, Kent, TO
BE LET on Building Lease, suitable for the erection of villas for residence or investment, they being in great demand in that locality. The Land is within ten minutes' walk of the Shortlands Station, and in a beautifully wooded district. The site is elevated, it runs a sub-soil of white sand and dry gravel, and a supply of very fine spring water.—Apply to JOHN WIMBLE, Esq. 2, Walbrook, E.C.

WOODFORD RAILWAY.—The GROVE,
WANSTEAD. Portions of this beautiful Estate are now TO BE LET for Building purposes, and Villa Residences are much required in the locality. Soil gravel, situation healthy, and water excellent. The Snaresbrook Station is 20 yards only from the Estate, and the City is reached in twenty-five minutes. The Leases will contain a clause entitling the Lessee to purchase the Freehold within a specified time. LAND also TO LET at Blackheath, Twickenham, Kingston; some very eligible SITES in the Grove road, Mile-end, a few of which are adapted for shops, and large and very CHEAP PLOTS TO LET, at Ealing.—Apply to Mr. KNIGHTLEY, Architect, 25, Cannon-street.

KEYNSHAM BLUE LIAS LIME and
CEMENT WORKS, SOMERSET.—TO BE SOLD by Private Contract, by order of the Liquidator, the newly formed FREEHOLD WORKS and ESTATE of the Keynsham Blue Lias Lime and Cement Company Limited. The property is freehold, and comprises about 7 acres, 2 roods, and 26 perches, or thereabouts. The works are established for manufacturing blue lias lime from stone quarried on the estate, and for making cements, under patent granted to Captain Scott, R.E. to whom a Prize Medal was awarded by the Jurors at the International Exhibition of 1862, in respect of cements made at these works. The existing kilns and ovens are capable of producing 70 to 80 tons of lime, and 100 tons of cement weekly. Both products are well approved by large contractors and eminent architects, the cement being used in many of the Government fortifications now in progress. Coals are supplied to the works at a very low price, and the Great Western Railway Station is within a short distance. The buildings are very substantial, and the machinery of the best description. The motive power is given by two iron water-wheels, driven by the River Chew, a regular and powerful stream of water; and there is a steam-engine, with boilers, if required. Additional supply of lias stone is secured from adjoining owners, on favourable terms. About 10,000l. will be required.—For further particulars, apply to Messrs. N. LINDO & SONS, Solicitors, 47a, Moorgate-street; or F. MAYNARD, Esq. Liquidator, 19, Bread-street, Cheapside; and of Messrs. FULLER & HORSEY, 13, Billiter-street, London, E.C.

FREEHOLD WHARF TO BE LET or
SOLD, facing the Canal in the Old Kent road.—Apply to Mr. MAY, Acorn wharf, Old Kent road.

TO BRICKMAKERS.—About 12 ACRES
of very valuable BRICK EARTH TO BE DISPOSED OF, either to purchase or on a royalty, near to a railway station, a few miles from London. A railway will pass through the ground.—Apply by letter to C. at W. Brown & Co.'s, Stationers, 40, Old Broad-street, E.C.

GROUND for SIX SHOPS, at Woodford,
very eligibly situated, close to the church, on the main road, and near the George-lane Station; also to be let, desirable Plots for detached or semi-detached villas.—Apply to the Freeholder, WASHINGTON SINGLE, Esq. The Grove, Woodford, N.E.

BUILDER'S PREMISES, Hackney.—
TO BE LET, on lease, a capital YARD, with spacious workshop, sawpit, and with or without dwelling house.—For particulars apply to Mr. THOMAS BULL, Auctioneer, 60, Cornhill, E.C.

TO CAPITALISTS and OTHERS.—For
SALE, the LEASE of a Valuable SLATE QUARRY in Carnarvonshire, in full working order, capable of producing an immediate return of about One hundred tons per week from a tramroad, by which the slates of carriage can be reduced to 4s. 6d. per ton.—Apply to Messrs. TAYLOR & MASON, 25, Furnival's Inn, London.

WANTED, MANUFACTURING PRE-
MISES, or Ground on which to build. Space about 20,000 feet. Within 2½ or 3 miles of the Royal Exchange.—Address, with full particulars, to E. 21, Victoria-street, Holborn-bridge, E.C.

NORWOOD, FOREST HILL, and
SYDENHAM.—To BUILDERS and others.—TO BE LET, on Building Lease, a PLOT of LAND, with about 80 feet frontage to the Selhurst-road, with a side front of 150 feet on a new road, within three miles of the new junction station, Norwood, eligible for first-class villa residences, the corner suitable for a tavern. Also about 320 feet frontage on the new road, about five minutes' walk from Forest hill station, suitable also for the above class residences. Also Two Plots of Land, of 80 feet frontage each, situate in Wells-road, Sydenham, suitable for small cottage property, which is very scarce in that locality. All on the Brighton and Crystal Palace railways with about eighty trains daily stopping at the above-named stations, rendering approach easy to the City and West-end, by means of the London Bridge and Pimlico Termini.—For particulars apply to Messrs. M. & I. GARNAR, 5, King-street, Bermondsey New-road, S.E.

THE spacious GALLERY of the SOCIETY
of BRITISH ARTISTS, Suffolk-street, Pall-mall East, consisting of five large rooms, TO BE LET, until the end of February.
T. ROBERT, Secretary.

BUILDING LAND TO BE LET, on lease,
situate in the best part of Norwood, within ten minutes' walk of the Crystal Palace, and immediately adjoining the Gipsy Hill station. This eligible building ground is suitable for detached or semi-detached villas, which are in great demand. Money can be advanced to build, if required, at moderate rates of interest.—For particulars, apply, personally, to Mr. WILLIAM BACKHOUSE, Architect, 32, Southampton-buildings, Chancery lane, W.C.

BUILDING LAND, Sandown, Isle of
Wight, OPPOSITE the Projected PIER.—Two or three Lots, situate on the High-street, with uninterrupted view of the magnificent bay, on Messrs. Leases, 1,000 years, at moderate rents.—Particulars of Mr. J. WITHERS, Timber Merchant, Sandown.

TO BE SOLD, FOUR first-class FREE-
HOLD BUILDING PLOTS, in the parish of Acton. Elevated situation, gravelly soil, and adjoining a private estate. Size of Plots, 200 feet by 30 feet. For further particulars apply to W. ROBERTS, 1, Green street, Paddington Green, W.

WANTED, a DETACHED HOUSE, with
or without Garden, in the Suburbs of London, or adaptation within fifteen miles. Rent, from 50l. to 90l. per annum. No objection to purchase.—Address, stating particulars as to locality, number of rooms in house, &c. to L. X. Post-office, 011 St. Pancras road, London, N.W.

LAND TO BE LET, for a PAIR of
VILLAS, at Clapham Rise, near a most important railway. N.B. The advertiser wishes to have the option of purchasing one house. Money advanced.—Address, Mr. Townsend, 75, Newington-causeway, S.E.

BUILDER'S PREMISES REQUIRED,
with good Workshop and Yard, with or without dwelling-house attached.—Address, DELTA, Office of "The Builder."

DOVERCOURT, Essex.—A very favourable
opportunity now presents itself to builders and others desirous of investing capital in the erection of marine residences. An estate at this delightful watering-place, immediately facing the sea and the Esplanade, and close to the railway station, with the roads formed, has been laid out in building plots, and the proprietor is willing to treat for the letting of the same on liberal terms. This beautiful healthy stands on an eminence, on a tongue of land on the shores of the German Ocean, commanding extensive and picturesque sea, land, and river views, and embracing many other advantages sought for in a seaside residence. It is about 2¼ hours from London, with direct railway communication, and has become a very favourite watering place, houses being in demand. For full particulars and plans of the sites, &c. apply to Mr. FRED CHANCELLOR, Architect, Powers Hall, Old Broad street, London, and Chelmsford, Essex.

LARGE and well-placed BUILDING, suit-
able for a chapel, manufacturing purposes, or any parties requiring space, with or without land, in the increasing market-town of Romford.—Apply to Mr. GEORGE KNOX, Park Cottages, Romford.

BRICK and TILE EARTH.—TO BE LET
or SOLD, four or five acres of rich EARTH, 100 yards from Romford Station, with shed and stock applied for immediate work. Apply for terms and to view to Mr. GEORGE KNOX, Park-cottages, Romford.

BUILDING LAND, UPPER NORWOOD,
close to the Crystal Palace.—TO BE LET, for the erection of small VILLAS, a class of residence much needed, and certain to let when completed. Advances if required.—Apply to Mr. T. K. GREEN, Architect, 7, College-hill, Cannon street, E.C.

TO BUILDERS.—TO BE LET, for
BUILDING, several valuable PLOTS, for Terraces and Villas and a Site for a Tavern, and for Shops, Beer-houses, and Residences, in Princes-hill, Cheshunt, and Norwood Junction.—Apply to Mr. R. R. MOORE, Architect, 10, Wallbrook, E.C.

TO BUILDERS and OTHERS.—Notice is
hereby given that the Trustees of the Rev. Dr. Spurrier's Charity Estate, Hackney, have several PLOTS of LAND TO LET to build on, eligible for villas and other respectable private dwellings. The land will be direct from the freeholder, free of land tax and all the commutation rent charge. The above estate offers an excellent opportunity to persons desirous of building houses to reside in themselves.—For further particulars apply to Mr. WILLIAMSON, Surveyor, No. 2, Old Church-yard, Hackney; or of Mr. C. H. PULLEY, of Upper Homerton, and 23, Great Winchester street, Old Broad-street, City, Solicitor.

WILLIAM GEORGE WARDLE,
STANGATE SAWING and MOULDING MILLS, PALACE ROAD, LAMBETH, S.

HUBBUCK'S PATENT WHITE ZINC PAINT.
By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.
ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent. Whether sold under the name of "Improved Zinc Paint," or as the number Two or Three quantities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.
CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.
EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."
THOMAS HUBBUCK & SON,
WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

BARTLETT, BROTHERS, & CO.

DEVONSHIRE WHARF, CAMDEN TOWN, N.W.

Manufacturers of SILICATES and ALUMINATES of SODA and POTASH,

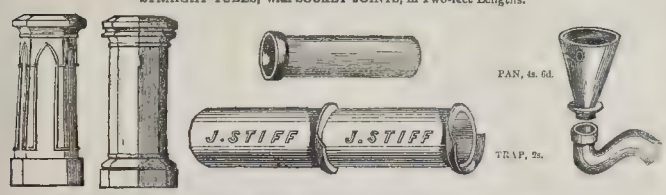
INTERNATIONAL EXHIBITION, 1862.
CLASS 35, NO. 6849.

The only Medal "for Stone Ware" has been awarded to

DOULTON & WATTS, LAMBETH POTTERY,
LONDON.



In expectation of a greatly increased sale, D. & W. have determined to introduce the annexed pattern of their ENAMELLED STONEWARE CLOSET-PANS, at the price of the commonest description of earthenware.

Experience has shown that this shape is the most simple and efficient, and that in strength, durability, and cleanliness it cannot be surpassed by the most expensive closets.

J. TYLOR & SONS' PATENT
REGULATOR WATER-CLOSETS.

Valve. Pan.

The Regulator Valve gives perfect control over the supply of water to each closet, so that, however small the fall of water, perfect flushing is insured. All closets can be worked by one pipe only. No intermediate valves, cranks, levers, or rods are required. The closets are in action at the Model Factory, and Illustrated Catalogues sent on application to the Manufacturers, J. TYLOR & SONS, Warwick-lane, Paternoster-row, London.

GUEST & CHRIMES, FOUNDRY and GENERAL BRASS WORKS, Rotherham; and 37, Southampton-street, Strand, London, W.C.
London House, Mr. THOMAS BEGGS.

ESKHOLME'S PATENT PNEUMATIC REGULATOR and VALVE CLOSET.

Suitable for first and second class houses, being most efficient and simple, free from all smell, and requires no cisterns, service boxes, cranks, wires, or levers, but is complete in itself ready for attachment to any ordinary house service pipe. It is supplied in three qualities, all equally efficient, differing only as to the style of fitting up. A second class quality is also manufactured. The Regulators are carefully applied to the ordinary Pan Closet, alike dispensing with all cisterns, service boxes, levers, cranks, wires, &c. The Regulator is supplied separately, as well as connected to ordinary direct Service Main Cottage, Water Closets.

Chrimes's Patent High pressure Single and Double Loose Valve and Screw Down Cocks; Improved Self-acting and Pull Water-Closet; Patent Absolute Water Waste Preventer; Plumbers' and Gas Fitters' Brass Work of every description. Drawings, Descriptions, Prices, and Testimonials will be forwarded per post on application as above.

TERRA COTTA and Fine STONEWARE POTTERY, warranted to stand Frost.
JOHN M. BLASHFIELD, STAMFORD POTTERY, STAMFORD, LINCOLNSHIRE, has greatly improved and re-established the manufacture of TERRA COTTA and Fine STONEWARE for ARCHITECTURAL PURPOSES. He is able to make it of various new colours, so as to harmonize well with Marble, Portland, and other stones, and equal in hardness to Granite.
A Medal at the International Exhibition was awarded, in Class 10, Section C, Architectural Objects, for "Perfection in manufacture and beauty of form." A Medal was also awarded for "Terra Cotta."
Moulded Bricks, String Courses, Copings, Cills, Tracery, Balusters, Capitals, Crosses, Pedestals, Vases, Shafts, Labels, Open-work, Garden Edging, Guttering, six, nine, and twelve inch Paving Tiles, &c. &c.
Also Plain and Mosaic Pavements for Halls, Churches, Conservatories, &c. in all colours.
London Office, 377, Oxford-street, W.

PRIZE MEDAL TO MAW & CO. INTERNATIONAL EXHIBITION 1862.

IMPERISHABLE TESSELATED PAVEMENTS, combining a highly decorative and economical substitute for ordinary floors of their perishable coverings. MAW & CO'S Pattern-book, designed by M. Digby Wyatt, esq. together with a special design and estimate of cost adapted to any required extension of hall, passage, conservatory, verandah, frieze, &c. will be sent on application to Benthall Works, Broseley, Salop.
May be seen at the Exhibition of Building Inventions, &c. now open at the Galleries of the Architectural Exhibition, 9, Conduit-street, free.
London Agents—W. B. SIMPSON & SONS, 456, West Strand, who have on view a great variety of Specimens of the Pavements.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 61 Wharf, Macclesfield street North, City road Basin, N. Finally, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and finally, that the "Reports of the Jurors," page 681, of the Great Exhibition, 1851, note the grant of a First-class Medal and rank the Manufactories known so long as "The Teleries," Tunstall, Staffordshire, as the first of the kind in the world.

TWO PRIZE MEDALS AT THE INTERNATIONAL EXHIBITION
MAGNUS'S ENAMELLED SLATE obtained the Medal of the Society of Arts, the Prize Medal at the Great Exhibition, 1851, Two First-class Medals at the Paris Exhibition, and Two Prize Medals at the International Exhibition of 1862.
Trashy imitations of this beautiful material are being palmed upon the public. Architects are therefore requested to see that the name of "MAGNUS" is upon each article.

SALES BY AUCTION.

LONDON, CHATHAM, and DOVER RAILWAY — Metropolitan Extensions. Thirty-third Clearance Sale. Building Materials, Earl-street, Blackfriars.

PULLEN, HORNE, & EVERSFIELD are instructed by the Directors to SELL by AUCTION, on the PREMISES, on MONDAY, AUGUST 31st, at TWELVE o'clock, in lots, all the capital BUILDING MATERIALS, FIXTURES, and FITTINGS UP of FOUR large HOUSES, Nos. 19, 20, 21, and 22, Earl-street, Blackfriars, with stabling, offices, and other premises in the rear; comprising superior brick work, prime timber in roofs and floors, slating, sound flooring-boards, loopholo and other doors, plate-glass and other sashes, stable fittings, lead gutters and pipes, grate tie pitching, iron bands, iron floor, gas fittings, and a variety of useful materials and fittings-up.—May be viewed. Catalogues had at Mr. VIGERS'S offices, 5, Frederick's place, Old Jewry; and of PULLEN, HORNE, & EVERSFIELD, 80, Fore-street, E.C. and 40, Parliament-street, S.W.

In Chancery: "Kemp v. Nunn," "Nunn v. Kemp."—Valuable Freehold and long Leasehold Building Land, Residential Estates, Ground Rents, Dwelling houses, and Shops, with land-tax as to the principal part, redeemed. Upper Tooting, Streatham, and Balham.

FRANCIS FULLER, the person appointed by the Judge to whose Court the above causes are attached, will SELL by AUCTION, at the MART, opposite the Bank of England, on MONDAY, the 31st day of AUGUST, 1863, at TWELVE for One o'clock, pursuant to an Order of His High Court of Chancery, made in the said causes, with the approbation of the said Judge, several valuable FREEHOLD and LEASEHOLD ESTATES, in Thirty Lots, comprising an important building area, unusually well situate at Upper Tooting, and recently adapted for the erection of family mansions and first-class residences, possessing excellent frontages to the high road from London to Tooting, and from Tooting to Wandsworth, and with easy access by road and rail to all parts of the metropolis. Six Freehold Building Lots (five of which are shops) situate at Upper Tooting. Desirable Freehold and Leasehold Family Residences, pleasure-grounds and gardens, known as The Hawthorns, situate at Upper Tooting, on lease at a rental of 180l. per annum. A very handsome Residential Estate, known as The Willows, situate at Balham, within a few minutes' walk of the station, comprising residence and park-like pleasure grounds, the whole containing upwards of 13 acres, and let on lease at 130l. per annum. Certain well-secured Ground Rents, amounting to 45l. per annum, arising out of two remarkably well-built Villa residences. Desirable Family Residence, known as The Boundary, with pleasure ground, kitchen gardens of four acres, beautifully situate close to Wandsworth-common, and within a few minutes' walk of Balham Station, let on lease at a ground-rent of 55l. per annum, with early reversion to the rack rent, estimated at 100l. per annum. The well-known Nursery Dwelling-house, gardens, and out-buildings, close to the Balham Station. Two well-secured Ground Rents of 9l. each, arising out of two excellently built family residences, and pleasure grounds and gardens, situate at Balham-hill, with early reversion to the rack rents, estimated at 80l. each. Semi-detached Villa residence, young grounds and garden, let on lease, with early reversion to the rack rent, estimated at 100l. per annum. Five well-built Family Residences, one with shop and garden ground attached, the whole forming Balham-place, and numbering 1 to 5 respectively, directly facing the high road from London to Tooting, and let on lease at ground rents producing 65l. per annum, with early reversion to the rack rents, estimated at 120l. per annum. Remarkably beautiful Residential Estate, known as Fernside, pleasantly situate, overlooking Wandsworth-common, and within a few minutes' walk of the Balham and Wandsworth Stations, comprising family mansion, park-like pleasure-ground, ornamental lake and flower gardens, the whole encircled with terrace walks and shrubberies, and containing upwards of 12 acres, on lease, expiring Lady-day, 1890, at 70l. 17s. per annum, with reversion to the rack rent, estimated at 300l. per annum. Five well-built Family Residences, pleasure-grounds, gardens, and outbuildings, beautifully situate, overlooking Wandsworth Common; the whole producing 120l. per annum, with early reversion to the rack rents, estimated at 300l. per annum. Forty villas and conditions are ready and may be had of Messrs. PALMER, BUTLER-HIP, & ELAND, Solicitors, 4, Trafalgar-square, W.C.; of GEORGE BOWER, Esq. Solicitor, 6a, Token-house-yard, E.C.; of Messrs. LAMB, HOOKS, & CHALLIS, Solicitors, Basingstoke; of Messrs. JOHNSON & WEATHERALLS, Solicitors, 7, King's Bench-walk, Temple, E.C.; at the White Lion, Streatham; the Greyhound, Croydon; the Wheatsheaf, Tooting; the Swan, Stockwell; of FULLER & WITHALL, Architects and Surveyors, 21, Parliament-street, Westminster; at the Mart; and of the Auctioneer, FRANCIS FULLER, 11, Cornhill, E.C.

WAREHAM, DORSET.—Important Sale of Machinery, comprising nearly new 35-horse power steam engine, rotary and American brick machines, mills, wire rope and iron, tramway, tip waggons, and all the valuable plant and machinery at the Sandford Clay and Pottery Works, with several hundred fine moulds and models, designed by JOHN THOMAS, R.A.; for sale, without the least reserve.

MESSRS. CHINNOCK & GALSWORTHY will SELL by AUCTION, upon the PREMISES, immediately after the sale of the estate, on TUESDAY, 8th SEPTEMBER, and following day, at TWELVE o'clock, by direction of the Liquidators of the Sandford Clay and Pottery Company (Limited), the whole of the valuable PLANT and MACHINERY on the extensive works, situate within half a mile of the Wareham Station on the London and South Western Railway, very recently erected for the manufacture of building and fire bricks, drain tiles and pipes, pottery goods of all kinds, terra cottas, &c.; comprising an excellent 35-horse power horizontal steam engine, pair of 30-inch tubular boilers, Bradley & Craven's rotary dry pressure brick machine, powerful American ditto pugging and clay grinding mills, tile and pipe machine, powerful drum with wire rope, 20 tip waggons, 1,700 yards of metal in tramway, endless bands, brick moulds, 96 wheelbarrows, crab engine, weighing machines, lathes, throwing wheels, jiggers, screw presses, two large slate vats with crank sieves, tanks, force pumps, shafts, driving pulleys, bevel cog-wheels, gear and tackleway, large glaze grinding pan and gear, all quite new, vacuum gauge, 12-in cast iron perforated plates, numerous tube, sieves, lathe rims, 70 gross of cranks, 16 casks of slabs and spars, quantities of dry and wet glaze, whiteleal, felspar, ground flint, kiln cobalt and other useful ingredients; also, a series of several hundred models and moulds designed by the late JOHN THOMAS, R.A., for the manufacture of terra-cotta, china, earthenware, &c., together with large quantities of shelving, racks, tables, benches, sheds, fittings, tools, implements, and all the effects upon the premises.—May be viewed a fortnight before the sale, and catalogues obtained of Mr. STEVENS, the Manager, at the works; of Messrs. MARCHANT & PEAD, Solicitors, 30, Great George-street, Westminster; at the Sandford Estate Offices, 17a, Great George street, Westminster; and of Messrs. CHINNOCK & GALSWORTHY, Land Agents and Surveyors, 21, Waterloo place, Pall Mall, London.

OXFORD.—VALUABLE BUILDING MATERIALS, comprised in the several Houses in Beaumont-street and Magdalen-street, the intended Site for the erection of the Randolph Hotel.

MR. JOHN FISHER begs to announce that he is instructed by the Randolph Hotel Company to SELL by AUCTION, in front of the said HOTEL next the above, the BUILDING MATERIALS; consisting of roofs, floors, doors, shop-fronts, sashes and frames, partitions, staircases, fittings, &c. which will be found peculiarly good for re-use, or otherwise, for the houses have been built within a few years.— Further particulars will be advertised previous to the sale.

TO SAW-MILL PROPRIETORS and OTHERS.—Steam Saw-Mill, with Engine and Machinery, and Two Houses adjoining, in the Hackney-road, with possession.

MESSRS. FULLER & HORSEY will SELL by AUCTION, on the PREMISES, No. 191, Hackney road, on WEDNESDAY, SEPTEMBER 9, at TWELVE o'clock, in one lot, a desirable STEAM SAW-MILL, with the Engine, Boiler, and Machinery therein, late in the occupation of Mr. John High, at a rental of 104l. per annum, but now in hand; also the TWO HOUSES adjoining on either side, Nos. 189 and 193, Hackney road (formerly Nos. 5 and 7 Edwards's row), let on lease for the remainder of the term, to respectable tenants, at 44l. per annum; the whole being held for twenty-two years, from Christmas, 1859, at the low rent of 60l. a year. May be viewed. Plan of the sale, and particulars had on the premises; and of Messrs. FULLER & HORSEY, 13, Billiter-street, E.C.

HIGH-STREET, PECKHAM.

MR. C. F. SMYRK is instructed to SELL by AUCTION, on MONDAY, AUGUST 31, at ONE for TWO, about 200 LOTS of excellent BUILDING MATERIALS, taken down for improvements, and limited to suit Builders and others, including long sound oak and fir timbers in great variety of scantlings, flooring, lining and shelving boards, fittings, fixtures, stone in blocks, steps, and paving, slates and tiles, firewood, gates, doors, and other effects. Catalogues on the premises, and of Mr. C. F. SMYRK, Surveyor and Valuer, 14, Newington place, S.

TO TIMBER MERCHANTS, CABINET-MAKERS, BUILDERS, MASONS, AND OTHERS.

MESSRS. LEREW & LEREW will SELL by AUCTION, on the PREMISES, Camden-terrace, Camden Town, near the North London Railway-station, on MONDAY, AUGUST 31st, at TWELVE, the STOCK, viz. 8,000 feet mahogany, 2,000 planks, deals, and battens, 150 squares of flooring, 8,000 feet quartering, 7,000 feet 4in square dry cut stuff, 60 doors, 70 scaffold poles, Shudders, Irish and Egyptian green, English and foreign marbles, useful stone, old materials, &c.—Auction Offices, Cardington-street, Hampstead road, near the Euston Station.

TO BUILDERS, HOUSE DECORATORS, AND OTHERS

MR. EWINS will SELL by AUCTION, at the MART, near the Bank of England, on WEDNESDAY, SEPTEMBER 9, at TWELVE, unless previously disposed of by private contract, the LEASE, and GOODWILL of the Business of a JOBBING BUILDER, DECORATOR, HOUSE AGENT, and UNDERTAKER, established forty years. Ground-rent moderate. The premises are commandingly situate, and known as St. Paul's House, corner of St. Paul's road, Barnsbury, Islington. May be viewed seven days prior to sale, and particulars had of Messrs. J. J. & K. WRIGHT, Solicitors, 27, Bedford row, W.C.; at the Mart; and of the Auctioneer, 19, Upper-street, Islington.

Unreserved Sale of the remaining portion of the Harrow Estate, comprising several lots of Freehold Building Land and two Freehold Villas, let on lease to a good tenant.

MESSRS. DEBENHAM & TEWSON are instructed by the Trustees to SELL, at the MART, on THURSDAY, SEPTEMBER 10, at TWELVE precisely, without the slightest reserve, 26 lots of FREEHOLD BUILDING LAND, situate close to the railway station at Harrow, having from 30 feet frontage to nearly an acre in extent, and eligible for the erection of villa or cottage residences, for which there is now a great and constantly increasing demand; also Two Freehold semi-detached Villas, situate in Peel road, adjoined to the above, let on repairing lease, at the very low rent of 7l. per annum. Water service is laid on to the estate, and the facilities of access to London offer great inducements to those desirous of obtaining residences in a healthy and rural neighbourhood, within easy reach of the metropolis. First-class free passes for eleven years will be granted by the Company to the occupiers of houses erected or to be erected on the lots of land.—For Particulars of H. CHILD, Esq. Solicitor, Paul's Bakehouse-court, Godliman-street; and of the Auctioneers, No. 80, Cheapside.

VICTORIA MARBLE WORKS, 38, LOWER BELGRAVE PLACE, adjoining the Victoria Railway Station, and at Commercial-road, Pimlico, London.

Every description of Marble Chimneys equally cheap, at T. DONOHUE'S, 27, Churchway, rummond-street, Euston-square.

TISBURY STONE. The WARDOUR (CHILMARK) and TISBURY STONE

Are prepared to execute orders to any extent for their TISBURY STONE.—This is a close, fine-grained Stone, of a beautiful colour, possessing all the qualities of the best Portland, in which range it is placed geologically.

It will supply the long wanted desideratum of the Architect, Builder, and Sculptor, as the Stone is a first-class Weather Stone, easily worked, and carries a fine arris; and is eminently adapted for carved mouldings, high-class architecture, and works of art, requiring only to be known to become the STONE OF THE DAY.

Specimens, Price, &c. may be obtained of SAMUEL TRICKETT, General Stone Merchant, Millwall; or at the Offices of the Company, 3, Adelaide place, London Bridge.

ABERDEEN POLISHED GRANITE WORKS.—Awarded Prize Medal in 1851, Silver Medal in 1855, and Two Prize Medals in 1862. Red, Blue, and Grey Granite for every description of architectural construction, decoration, memorials, and general purposes. Apply to Mr. MACDONALD, Aberdeen; or to Mr. DAVID WILLET, London Agent, 404, Euston road, N.W.

GRANITE.—The Cheesewring Granite Company, Limited, Liskeard, Cornwall. SHOW ROOMS, 6, CANNON-STREET, E.C. London Agents—TREGELLES & TAYLOR. Manager—JAMES J. TRATHAN, Liskeard This Granite is selected for the New Westminster Bridge. DRINKING FOUNTAINS, MONUMENTS, and ORNAMENTAL WORKS supplied, and ARTISTIC DESIGNS suitable to the materials forwarded on application. EDGE RUNNERS OF SUPERIOR QUALITY.

GRANITE OBELISK for SALE.—The beautiful OBELISK, in polished Grey Granite, that stood in the Eastern Nave of the Exhibition Building, is now OFFERED for SALE.—Apply to Messrs. H. POOLE & SON, Great Smith-street, Westminster. The Obelisk is erected at Lloyd's Wharf, Millbank, where it may be seen. It is suitable either for a monument or for an ornament for pleasure grounds.

LITTLE CASTERTON FREESTONE. Apply for prices, &c. to OCTAVIUS N. SIMPSON, STAMFORD; and see Specimens at the Office of Messrs. PINDER SIMPSON & SONS, 29, Savile-row, London, and at the Museum of Practical Geology, Jermyn-street, W. This stone (which is a perfect colite), is raised in blocks of any portable size, and is about four feet thick in the bed. It will stand ANY WEATHER, is much used for water-works, and for the building and restoration of churches. When used as ashlar work it is not necessary to place it bed-wise. It works freely with a tooth-saw, and is wrought at a cheaper rate than any stone in the kingdom.

BELLMAN & IVEY, GENERAL AND ORNAMENTAL PLASTERERS, Manufacturers of SCAGLIOLA MARBLE and SUPERIOR PLASTER OF PARIS. This Plaster, made expressly for their own business, is of excellent quality, and its extreme lightness in weight ensures a saving of 30 per cent. in use, from its covering one-third more superficies than the general plaster. PRIZE MEDALS were awarded Messrs. Bellman & Ivey for their Works at the Exhibition of 1851, and again in 1862. PLASTER WORKS, 3, BEDFORD-STREET, LIQUORPOND-STREET, LONDON, E.C. SHOW ROOMS AND OFFICE, 14, BUCKINGHAM-STREET, PORTLAND-ROAD LONDON, W.

PORTLAND STONE. Portland Slab, Paving, Landings, and Scantling of every size sawn by steam, always kept in stock; also York Paving and Landings, Steam, Stone, and Marble Saw Mills, Cremorne Wharf, Chelsea, and Grosvenor-road, Pimlico. THORN & CO. Stone Merchants and Contractors.

HY. GEORGE & COMPANY, CAEN and AUBIGNY QUARRYMEN and GENERAL STONE MERCHANTS, CAEN WHARF, ROTHERHITHE, S.E. Seasoned Caen Stone always in Stock, and a large assortment of Sawn Slab in Parkspring, Harehill, &c. &c. Grindstones, Stairs, Sills, Coping, Landings, Paving, and all descriptions of Yorkshire Block. Cargoes shipped direct from the Quarries. Prices and specimens forwarded on application

WILLINGTON STONE WHARF, REGENT'S PARK BASIN. HY. GEORGE & CO. The late Proprietor is now conducting the business of the above wharf as the Managing and Resident Agent (Mr. JOSEPH CHADWICK).

YORKSHIRE STONE of every description, in Paving, Landing, Sawn Slabs, Headstones, Steps, Coping, Sinks, Curbs, Stairs, and Blocks, in Bramley Fall, Park Spring, Harehill, Lofthouse, Potter Newton, Burley, and from other approved Quarries.

PORTLAND, Bath, Caen, Aubigny, Forest of Dean, and Grindstones of best quality

GRANITE BLOCK, Street Curb, Tram, and various kinds of Pitching, Mount Sorrel Cubes, and Cornwall Grain, generally

MARBLE SLAB of various kinds, and Blocks of fine quality

N.B. Wrought Work executed at the quarries as per drawings and instructions furnished.

CARGOES SHIPPED direct from the Quarries, or delivered by barge, or railway and road conveyance, at moderate charges.

Particulars furnished by Mr. JOSEPH CHADWICK, Agent and Manager, at is Office on the premises, or by post.

TAKE NOTICE.

CONTRACTORS, BUILDERS, and MASONS. All Estimates made at a considerably reduced cost for Marble Work. Good Veined Chimneypieces at the reduced price of 3l. to 5l. 5s. Statuary Chimneypieces, from new designs, carved, 10l. to 40l. each. A great variety of Coloured Marbles always ready to select from. The Trade will find a Liberal Discount at this Establishment. WESTMINSTER MARBLE WORKS, EARL STREET, HORSEFERRY ROAD, S.W.

RED MANSFIELD STONE, WHITE MANSFIELD STONE. YELLOW MAGNESIAN or BOLSOVER LIMESTONE Consigned in railway trucks, direct from the Quarries, in blocks not exceeding twelve tons; or worked at the Quarries and delivered free from injury at any railway station. Mr. ROBERT LINDLEY, Mansfield Quarries, Nottinghamshire.

CAEN and AUBIGNY STONE. FOUCARD, BROTHERS, Late P. FOUCARD, STONE MERCHANTS and QUARRYMEN. Cargoes shipped to order from Caen or any port. Contracts taken for any quantities. Office—10, Three Crown-square, Southwark.

W. & J. FREEMAN, Merchants in the various descriptions of STONE, GRANITE, and SLATE, for Engineering and Building Purposes. Supplies direct from the Quarries, by vessel or railway. Direct communication with the principal ports for EXPORTATION. Wharf prices and estimates for special contracts, including quarry work or other labour, forwarded on application.—Office, 57, Millbank-street, London, S.W.

COLLINS, M.I.B.A. of No. 10, Surbiton, Esq. as the Consulting Architect, to whom they refer for information as to their scientific application of the same. Estimates and the reduced prices may be obtained from the Manager, Mr. TYLER, 12, Abingdon-street, Westminster, S.W.

CONTRACTS.

WAR DEPARTMENT CONTRACT.—NOTICE to BUILDERS. TENDERS are required for the CONSTRUCTION of a SEA WALL at the foot of Cliff, in front of Tavenland Battery, near Sandown, Isle of Wight, in Portsmouth District.

Parties desiring to Tender for the execution of this work must leave their names at the office on or before the 16th day of SEPTEMBER, 1863, and pay the sum of ten shillings and sixpence for the Bills of Quantities, which will be forwarded to each party as soon as prepared by the Government Surveyor.

The Secretary of State does not bind himself to accept the lowest or any Tender.

Royal Engineer Office, Portsmouth, 22nd August, 1863

WAR DEPARTMENT CONTRACT.—NOTICE TO STONE MERCHANTS AND OTHERS

TENDERS are required for the SUPPLY of 700 YARDS of BROKEN KENTISH RAG STONE, to pass through 1½ inch ring, and 100 YARDS of fine SITTING, for landside, at per yard cube

Parties desiring to Tender for the supply of the above must leave their names at the office on or before the 10 h day of SEPTEMBER, 1863, when forms of Tender and every requisite information will be afforded.

The Secretary of State does not bind himself to accept the lowest or any Tender.

Royal Engineer Office, Woolwich, 1st September, 1863.

ARMY CONTRACTS.—TENDERS will be received at this Office until Noon on WEDNESDAY, the 30th SEPTEMBER, 1863, from persons who have been willing to enter into CONTRACT for the SUPPLY of FORAGE, in such quantities as may be required from 1st NOVEMBER, 1863, to 31st OCTOBER, 1864, for the use of Her Majesty's Forces stationed at Aldershott Camp, and within the command.

Forms of Tender and Condition of Contract may be obtained on application at this Office, by letter or in person, between the hours of TEN and FOUR o'clock.

The Tenders must be properly filled up and signed, and delivered at this Office (under closed envelope, marked on the outside "Tender for Forage,") and no Tender will be noticed unless made on forms obtained from this Office and delivered by the hour appointed.

HENRY B. MORSE, Deputy Commissary General.

Commissariat Office, Aldershott, 2nd September, 1863

COAST GUARD CONTRACT.—NOTICE to BUILDERS and CONTRACTORS.

Persons desirous of TENDERING for the ERECTION of a COAST GUARD STATION at Camber, near Rye, in the county of Sussex, may inspect the Drawings and Specifications at the Watch-room of the Coast Guard Station, Rye, or at this Office, between the hours of TEN and FOUR, from THURSDAY, the 3rd, to TUESDAY, the 15th SEPTEMBER now next ensuing, and both inclusive (Sundays excepted)

Tenders to be sent to this Office not later than TWELVE o'clock at noon of WEDNESDAY, the 16th SEPTEMBER, under seal and directed to the Commodore Controller General of Coast Guard, and endorsed "Tender for Camber."

The Lords Commissioners of the Admiralty do not pledge themselves to accept the lowest or either of the Tenders.

Dated this 24th day of August 1863, at the Admiralty.

Coast-Guard Office, 12, Spring-gardens, London, S.W.

BOROUGH of TYNEMOUTH.—To BUILDERS, BOILER MAKERS, IRON FOUNDERS, PAINTERS, and CONTRACTORS. TENDERS are required for the Builders', Smiths', Iron Founders', and Painters' Works necessary in making certain ADDITIONS, ALTERATIONS, and RENEWALS, and for CLEANING, PAINTING, and WHITEWASHING, at the Baths and Wash houses, North Shields. Plans and specifications may be inspected, and further information obtained on application to Mr. THOS ROBSON, Borough Surveyor, North Shields, North Shields Satisfactory securities will be required for the due performance of the Work. The lowest or any Tender will not necessarily be accepted

Sealed Tenders, endorsed "Works at Baths and Wash houses," to be delivered on or before MONDAY, the 7th day of SEPTEMBER next, to THOMAS CARR LIETCH, Town Clerk.

Tynemouth, August 15th, 1863.

BOARD of WORKS for the STRAND DISTRICT.—To DUSTMEN, SCAVENGERS, and CONTRACTORS The Board hereby give notice, that they are prepared to receive TENDERS from parties who may be willing to CONTRACT for the REMOVAL of all ASHES, SLUDGE, SNOW, DUST, STRAW, LITTER, REFUSE, and any other matter or thing that may be swept up or otherwise collected in or upon the several footways and carriage ways in the district, and also for the receipt of all such ashes, as I refuse from the several houses, sheds, and other places in the district, for the term of three years from Michaelmas day next, determinable at the expiration of the first or second year, at the option of the Board, of a specification, which may be seen at the Board's Offices, No. 5, Tavistock-street, Covent Garden, daily from TEN till FOUR. The contractor will be required to enter into a bond with two approved sureties for the due performance of the contract. The Board will meet to open Tenders on WEDNESDAY, the 16th day of SEPTEMBER inst. at HALF PAST SIX o'clock in the afternoon of the day of meeting. The Board do not pledge themselves to accept the lowest or any Tender, and no Tender will be received after 2 o'clock on the afternoon of the day of meeting. The Bank of England notes or other Tenders to be returned immediately to parties whose Tender shall not be accepted, and retained until the bond and contract shall be duly executed by the party whose Tender shall be accepted.—By order,

JAMES H. F. LEWIS, Clerk to the Board.

No 5, Tavistock-street, Covent Garden, September 1, 1863

CONTRACTS.

HALIFAX CORPORATION WATER-WORKS.—WORKS in the LUDDENDEN VALLEY.—To CONTRACTORS.—The Corporation of Halifax are ready to receive TENDERS for the CONSTRUCTION of the WORKS included in the following Contracts:—No 1, or Warley Moor Contract, comprising the Construction of a large Reservoir on the fly level with the Embankments and masonry connected therewith; and a Conduit about 1,950 yards in length from that Reservoir to the Pulshaw Stream, near Cocks Cliff. No 2, or Midgley Moor Contract, comprising the Construction of an open Watercourse, from Low Brown Knoll Flat to the Reservoir on the Fly level, about 2,080 yards in length, with overflows, shafts, bridges, and culverts connected therewith; and two Resident Lodges; and No 4, or Saltonstall Contract, comprising the Construction of a Masonry Conduit about 3,910 yards in length, the driving and lining of a Tunnel 270 yards in length, with the sinking of two shafts, the laying and jointing of about 650 lineal yards of cast iron pipes of 30, 18, 14, and 12 inches diameter, with all bridges, admission and outlet walls, observatories and other works connected therewith. The plans, sections, and drawings of the several contracts may be seen, and specification and forms of tender obtained, at the Townhall, Halifax; and at the offices of the Engineer, J. F. BATEMAN, Esq. F.R.S., 8, St James squares, Manchester, and 16, Great George street, Westminster on and after WEDNESDAY next, the 19th AUGUST, 1863. Sealed Tenders must be addressed to and left with EDMUND MINSON WAKELL, Esq. Town Clerk, Halifax, not before MONDAY, the 14th SEPTEMBER, 1863, and endorsed with the name of the particular Contract for which it is a Tender. The Corporation do not bind themselves to accept the lowest or any Tender, and they may, if they see fit, let the whole Work in one Contract

EXTENSION OF TIME.

SALTBURN-BY-THE-SEA. — To BUILDERS.—TENDERS are required for the ERECTION of FOUR FIRST CLASS DWELLING HOUSES, at the above named watering place, according to plans and specifications which can be seen at Mr. Ogle's Feethams, Darlington from THURSDAY, AUGUST 27th, until TUESDAY, SEPTEMBER 15th. The various Tenders to be delivered to me not later than NINE o'clock a.m. on WEDNESDAY, SEPTEMBER 16th. JOHN ROSS, Architect.

TO MASONS, BUILDERS, and OTHERS. TO BE SOLD, by TENDER, about 41 Lots of IRISH MARBLE (Black), in thirty blocks, averaging in length 4 feet 6 inches by 2 feet square. Tenders to be sent in by the 14th SEPTEMBER, addressed, "Coal Consumers' Company, West-street, Gravesend," where the marble may be seen, and further particulars obtained.

Gravesend, 27th August, 1863. W NEWMAN, Secretary.

TO BUILDERS.—TENDERS are invited from Builders, &c. who are willing to CONTRACT for the ERECTION of a CORN WAREHOUSE at the Polegate Station of the London and Brighton Railway. The plan and specification can be seen, and all other particulars obtained, by applying at the Office of GEORGE ADAMS, Corn Merchant, Willingdon, near Hurst-green, Sussex, not later than SATURDAY, the 12th SEPTEMBER next, after which date no further Tenders will be received.

SHREWSBURY SEWERAGE.—The Improvement Committee are prepared to receive TENDERS for the construction of the MAIN OUTLET SEWER, from the River Severn, at or near Preston Boats, to the river near to the English bridge at Shrewsbury. Plans, sections, and specification may be inspected at my Office, on and after THURSDAY, the 27th instant. Printed forms of Tender, and printed bills of quantities, may be obtained in duplicate on payment of 2s. Sealed Tenders to be sent to my office, not later than TWELVE o'clock, noon on WEDNESDAY, the 9th of SEPTEMBER next, endorsed "Tender for Main Sewer." Further particulars may be obtained from Mr. J. CURLY, C.E. Hereford. The Council and Committee do not pledge themselves to accept the lowest or any Tender. J. J. PEELE, Town Clerk.

Guildhall, Shrewsbury, 22nd August, 1863.

TO CONTRACTORS.—The Building Committee of Lake-road Chapel, Landport, Portsmouth, are desirous of receiving TENDERS for the ERECTION of a new CHAPEL, &c. Plans and specification may be seen at the Office of Messrs RAWLINSON & SONS, Architects, Albert Cottage, Blackhead Portsmouth. Tenders to be delivered to Mr. CROWTER, 140, Lake road, Landport on or before the 27th day of SEPTEMBER, 1863. The Committee do not bind themselves to accept the lowest or any Tender. Persons desirous of tendering for the above chapel may obtain the bills of quantities at the Architects' Offices on the payment of 10s.

Portsmouth, September 2nd, 1863

OLDBURY NATIONAL SCHOOLS.—To BUILDERS.—The Building Committee give notice that they are prepared to receive TENDERS for the ERECTION of the above SCHOOLS. Persons willing to Tender may see the plans, elevation, and conditions at the Offices of the Architect, Mr. EDWARD HOLMES, 4, Waterloo street, Birmingham. Tenders, endorsed "Tender for Oldbury National Schools," to be sent in on or before the 3rd of OCTOBER, to the Rev. H. B. BOWLBY, Oldbury Parsonage, near Birmingham. The Committee do not bind themselves to accept the lowest or any Tender.

TO ARCHITECTS and OTHERS. — The Committee are desirous of receiving PLANS and SPECIFICATIONS for BUILDING a NEW NATIONAL CHURCH at Ringwould, near Deal, to contain one gallery, and to seat 350, exclusive of sundry. To be built with Swanage stone, laid in courses (all the stones in the front to be squared), with the best Bathill grit dressings; or with white or red brick, with stone dressings. A minister's vestry required, but no school room. A ground plan of the site may be obtained on application to Mr. H. HOLLOWAY, surveyor, Ringwould. The person whose plan is selected will be appointed architect. Plans and specifications to be sent, sealed, on or before the 1st MARCH, to HENRY RUMSEY, secretary to the Building Committee, at the Wilts and Dorset Bank, Ringwould.

Dated 2nd September, 1863.

[For remainder of Contracts see next Page.

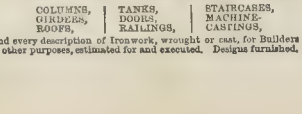
CONTRACTS.

TO SEWER CONTRACTORS.—The Surveyors of Highways of the Parish of Bletchingley, Surrey, will meet in the Vestry Room of the said Parish on WEDNESDAY, the 16th SEPTEMBER instant, at FOUR o'clock p.m. to receive TENDERS for the CONSTRUCTION of certain SEWERS in the said Parish. The drawings and specification may be seen at my Residence, any day between the hours of TEN a.m. and FOUR p.m. The Surveyors do not bind themselves to accept the lowest or any Tender; and no Tender will be received after FOUR o'clock p.m. on the above named day.
W. KENT, Clerk.

METROPOLIS MANAGEMENT ACTS. To BUILDERS, CONTRACTORS, and OTHERS.—The Board of Works for the Plumstead District are prepared to receive TENDERS for ERECTING a new BOARD ROOM BUILDING and OFFICES, upon a plot of ground situate on the southern side of the High-street, in the parish and village of Charlton, Kent, S.E. The drawings, specification, and draft contract for the work, may be inspected, and bills of quantities and forms of Tender obtained upon application at the Office of the Board, at Old Charlton, S.E. between the hours of TEN a.m. and FIVE p.m. on and after MONDAY, the 7th SEPTEMBER next. The Tenders are to be addressed to the Clerk to the Board under a sealed envelope, endorsed, "Tender for Plumstead District Board Offices," and to be delivered at the above mentioned Office in Charlton not later than FIVE o'clock in the afternoon of WEDNESDAY, the 16th day of SEPTEMBER next. The Board do not pledge themselves to accept the lowest or any Tender, and the party whose Tender may be accepted will be required to provide two sureties satisfactory to the Board, which sureties, together with the contractor, must enter into a joint and several bond to the Board in the sum or sums, for the due performance of the contract.—By order,
CHARLES AUGUSTIN SMITH, Clerk to the said Board.
Old Charlton, S.E. 27th August, 1863.

TO STEEPLE-BUILDERS, &c.—The Spire of St. Mary's Church, Monmouth, which is about 200 feet high from the ground line, being in a dilapidated state and out of perpendicular to the extent of about 25 feet from the summit, the Churchwardens are ready to receive TENDERS for the REPAIR thereof. They do not bind themselves to accept the lowest or any Tender.
Monmouth, August 31st, 1863.

TO BUILDERS.—Persons willing to TENDER for a new PLATE-GLASS SHOP-FRONT and sundry ALTERATIONS and REPAIRS to the HOUSE of Mr. Grinstead, Tobacconist, High-street, Chelmsford, may apply to see the plans and specification at the Office of Mr. WEBB, Architect, Guy Harlings, Chelmsford, on and after FRIDAY next, the 4th of SEPTEMBER. Tenders to be delivered to Mr. WEBB on or before FRIDAY, the 18th of SEPTEMBER.—The lowest or any Tender will not necessarily be accepted.



TO CONTRACTORS, BUILDERS, &c.—Notice is hereby given, that the Highways, Sewers, and Public Works Committee of the Vestry of St. Pancras will meet at the Office of the Department of Works, on MONDAY, the 14th day of SEPTEMBER, 1863, at SIX o'clock p.m. to receive and consider TENDERS from persons willing to CONTRACT for the EXECUTION of GENERAL WORKS to Sewers, Gullies, and Buildings in charge of the said Vestry, agreeably with the terms of specification, Schedule and Tender to be obtained on the deposit of 1l at the Office of Mr. WILLIAM BOOTH SCOTT, C.E. Chief Surveyor, as under. Good security will be required for the due performance of each Contract. The Vestry do not bind themselves to accept the lowest or any Tender. No Tender will be accepted unless made out on the printed form. Tenders must be delivered by NOON on the said MONDAY, 14th SEPTEMBER, 1863.—By order
CHAS WORRELL,
Chief Clerk of the Department of Works.
10, Edward-street, Hampstead road, September, 1863.

HOUSE of CORRECTION, Coldbath Fields.—To BUILDERS.—The Visiting Justices will meet at the Prison, on FRIDAY, the 18th day of SEPTEMBER next, at TWELVE o'clock at noon, to open TENDERS for the ERECTION of a NEW BUILDING there. Persons willing to TENDER for the Works may see the plans, specification, conditions, and form of contract and bond at the Office of F. H. FOWNALL, Esq. the Architect, 15, Gower-street, Bedford-square, on any day, between TEN and FOUR, after FRIDAY, the 4th SEPTEMBER next; and they may obtain copies of the bills of quantities and the forms of Tender on payment of a deposit of one guinea, which will be returned on the receipt of a bona fide Tender. The Tenders must be made on the printed form, and they must be sent in, with a sealed-up schedule of prices, addressed to the Clerk of the Peace, Sessions House, Clerkenwell, by ELEVEN o'clock in the forenoon of the 18th of SEPTEMBER. The parties Tendering must attend personally, at the Prison, at TWELVE o'clock on the same day precisely, prepared with the names of two responsible sureties. The Visiting Justices do not bind themselves to accept the lowest or any of the Tenders; and if a Tender should be accepted, the person making the same must forthwith sign the draft contract and bond. Persons Tendering are required to make themselves previously thoroughly acquainted with the terms of the contract, as set forth in the draft, as the Visiting Justices will not consent to any alteration whatever therein.
August 21, 1863 JOHN S. SKAIFE, Clerk.

BOARD of WORKS for the HACKNEY DISTRICT.—Notice is hereby given, that the Board of Works for the Hackney district will, at their meeting, to be held on the 10th day of SEPTEMBER next, at the TOWN HALL, CHURCH STREET, HACKNEY, at ELEVEN o'clock in the forenoon precisely, be prepared to open TENDERS for the supply and delivery of 1,500 TONS of BEST BLUE GUERNSEY GRANITE, broken to a gauge of 2½ inches, to be delivered on the wharf of the said Board of Works, at Kingsland Basin, in such manner, and in such quantities and manner as shall be directed by the Surveyor. Any further information may be obtained by applying to Mr. JAMES LOVEGROVE, C.E. Surveyor to the Board, at his Office, 108, Old Hackney. Tenders to be sent in before NINE o'clock, a.m. on THURSDAY, the 17th day of SEPTEMBER next, addressed to the Clerk, and endorsed "Tenders for Broken Granite." Persons contracting will be required to enter into a Contract, or Bond, for the due performance of the Contract. The Board do not bind themselves to accept the lowest or any Tender.
Signed, RICHARD ELLIS, Clerk.
Dated, 27th August 1863.

COCKERMOUTH, KESWICK, and PENRITH RAILWAY COMPANY.—To BUILDERS.—TENDERS are required for the ERECTION of a large first-class HOTEL, at the Keswick station, according to plans and specifications prepared by Mr. ROSS, Architect, Darlington, which can be seen at his Offices, Feethams, Darlington; or at the Offices of the Cockermouth, Keswick, and Penrith Railway Company, 58, Fleet-street Keswick, from WEDNESDAY, SEPTEMBER 2, to WEDNESDAY, SEPTEMBER 23, 1863.—Sealed Tenders to be delivered to me before TEN a.m. on the last mentioned day.
HENRY CAITLE Secretary.
Secretary's Office, St. John street, Keswick, August 28, 1863.

COOMBS & McCALL, Dover Iron Works, Staple-street, Long-lane, Borough, S.E. (late H. G. COOMBS, 17, Union street, and 293, Great Guildford-street, Borough, S.E. in vention of the Railway Spear Front, Patentee of the Tubular Railings, new Compensating Girder Truss, &c. &c.)

BURNEY & BELLAMY, Mill-wall, London.
Steam-boats from London Bridge call near the Factory.

THE INTERNATIONAL EXHIBITION PRIZE MEDAL, AWARDED 1862.
ESTABLISHED 1744.
AUSTIN'S IMPERIAL PATENT SASH and BLIND LINES.
To BUILDERS, CARPENTERS and BLIND MAKERS.
J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his
IMPERIAL PATENT FLAX SASH-LINES,
of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.
They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

J. TYLOR & SONS' PATENT BATH APPARATUS.

The bath and boiler may be fixed in the same or separate rooms, anywhere below the level of cold-water cistern. Open or close fire at pleasure. No brickwork setting for boiler required.
Estimates given from architects' drawings, or by inspection of buildings.
Catalogues, containing Nine Illustrations of different methods of heating baths, sent on application to the Manufacturers, J. TYLOR & SONS, Warwick-lane, Newgate street, London.

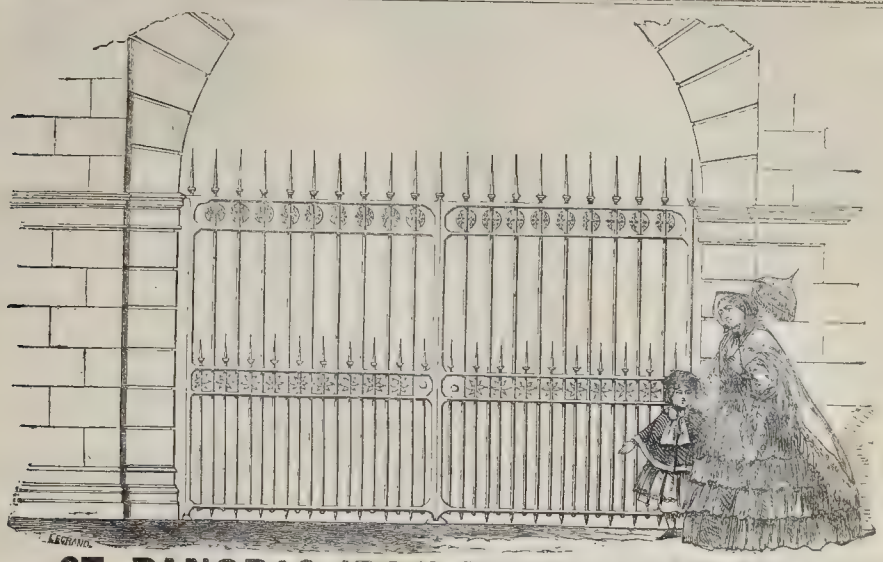
"	Exchange-buildings, Dundee.
"	7, Frederick-street, Aberdeen.

RICKETT & HAMMOND'S
VENTILATING GLOBE LIGHT,
combining an agreeable method of lighting, with convenient, simple, and efficient ventilation.

The advantages obtained are these—
A TOTAL REMOVAL OF ALL PRODUCTS OF COMBUSTION.
A COMPLETE DISPLACEMENT OF HEATED AND VITIATED AIR.
AND A CONSIDERABLE ECONOMY IN THE CONSUMPTION OF GAS.
A GLOBE LIGHT will consume 5 to 7 feet of gas per hour, giving as much light as an ordinary three-light chandelier, with a consumption of 12 feet per hour.
5, AGAR STREET STRAND, LONDON, W.C.

FIRE-PROOF CONSTRUCTION.—FOX & BARRETT'S PATENT.
This improved system of fire-proof construction has been most extensively applied, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.
The system combines ECONOMY with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.
The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete, so constructed that each floor becomes in effect a beam of artificial stone with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.
Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as meeting the great desideratum of fire proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.
Further information may be obtained of the Proprietor of the Patent,
MR. BARRETT,
12, YORK BUILDINGS, ADELPHI



ROOFING METAL (WETTERSTEDT'S PATENT or MARINE),
In sheets 2lb. and 3lb. per square foot, 9 feet long by 3 feet wide.
The most durable and economical metal for roofing.

HOBBS'S CELEBRATED MACHINE-MADE LEVER LOCKS,

Suited for all purposes, at Prices that silence competition.

SUITES OF LOCKS FOR MANSIONS, WAREHOUSES, AND OTHER LARGE STRUCTURES, WITH OR WITHOUT MASTER KEYS.

PUBLIC BUILDINGS OF EVERY KIND FITTED.

The parts in the Plate marked F and C show the form of Hobbs's Patent Frictionless Follower and Crank, by which a rolling instead of a rubbing motion is produced, thereby preventing friction.

S, s, shows the double spring, by which means the Latch is allowed to work independent of the Crank in shutting the door, thereby avoiding the necessity of slamming, at the same time sufficient strength is given by the Follower Spring to throw the heaviest knobs or handles.

HOBBS' PATENT FRICTIONLESS FOLLOWER, & DOUBLE SPRING FOUR-LEVER MORTISE LOCK, Price 8s.

FIREPROOF SAFES, IRON DOORS, CASH BOXES, &c.

HOBBS'S PATENT PROTECTOR LOCK, AND CHANGEABLE KEY BANK LOCK FOR SPECIAL SECURITY.

ESTIMATES AND ILLUSTRATED PRICE LISTS FURNISHED ON APPLICATION.

For specimens of all the varieties of these LOCKS, and the different stages of manufacture by machinery, from the first to the last process, see HOBBS'S STAND in the EXHIBITION, CLASS 13, No. 6105, ON THE SOUTH-WEST SIDE OF THE EASTERN DOME.

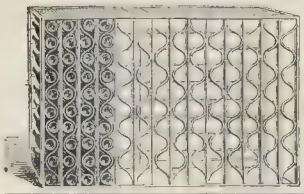
WROUGHT IRON WINE BINS.



FARROW & JACKSON

Beg to call the attention of Architects and Builders to their Wrought Iron Wine Bins, which are ADAPTED (as shown) either for BRICK ARCHED VAULTS or CELLARS with FLAT CEILINGS, the mode of fixing in either case being so simple, that they may be put up by any ordinary workman. They combine great strength with lightness and economy of space, and their DURABILITY has been satisfactorily PROVED DURING THIRTY YEARS.

The Shelves are formed of Plates of Iron laid on Bars, which rest on the Cross-bars of the Lattice Uprights, and are removable at pleasure.

Plans and Estimates furnished, and Cellars fitted complete in any part of the Kingdom. Also their

NEW REGISTERED IRON BINS,

Made any size or shape, to fit any spare corner, with SEPARATE REST FOR EACH BOTTLE,

Peculiarly adapted for Private Cellars.

No laths are required, and all trouble of Binning is avoided.

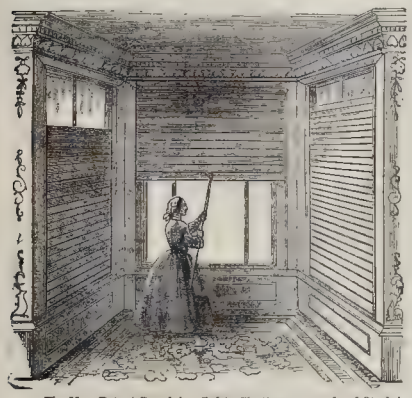
REVOLVING SHUTTERS, TWO SHILLINGS PER FOOT.

BY HER MAJESTY'S ROYAL LETTERS PATENT.

CLARK & CO. PATENTEES,

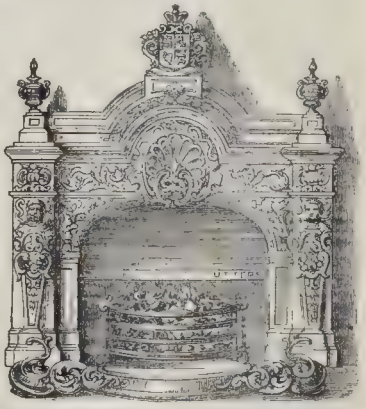
And Manufacturers to the Honourable Board of Works,

15, GATE STREET, LINCOLN'S INN FIELDS, LONDON,



AND 4, MARKET STREET, MANCHESTER.

CLARK'S Patent Self-Coiling Iron Shutters, 3/ per Foot.



CLARK'S Patent Self-Coiling Wood Shutters, 2/6 perFoot.

The utility of Revolving Shutters for closing Shop Fronts, Windows of Private Houses, Fireplaces, and every description of opening, is universally acknowledged; but the cost has hitherto prevented their general adoption. This objection Messrs. CLARK & CO. have met by introducing their PATENT SELF-COILING SHUTTERS, in Steel, Iron, and Wood, which, in addition to being less expensive than the ordinary shutters, have the advantage of being remarkably simple, and, consequently, not liable to get out of order. The Wood Shutters are constructed of laths of wood rebated together, having numerous mortises, through which pass a series of tempered steel bands, causing the Shutters to be Self-Coiling, and rendering them proof against Burglars.

CLARK'S PATENT SELF-COILING STEEL SHUTTERS, 3/6 pe Foot.

The New Patent Revolving Safety Shutters are made of *Steel, in one sheet* (without either chain, links, rivets, or pins); the steel is corrugated transversely, which gives the appearance of laths, and enables them to be coiled into a small space. The corrugations render the Shutter exceedingly rigid, transversely and remarkably pliable, and self-coiling longitudinally. They are light, and can be pushed up and drawn down without the aid of machinery of any description. It is absolutely impossible for them to get out of order.

From the strength and hardness of the material of which they are composed, and being in *one sheet*, they cannot either be cut or broken through, as there is no opening or a lever or other instrument to be inserted as in the ordinary lath shutter, rendering them doubly secure, as any attempt to break through or open them will give an immediate alarm through the building. Their numerous advantages, coupled with the lowness of price, must insure their universal adoption, both in SHOP FRONTS and PRIVATE HOUSES.

These Shutters are Manufactured solely by the Patentees, Messrs. CLARK & CO. and are the only Revolving Shutters made that do not require machinery or gearing apparatus, while the cost is the same as the ordinary Lifting Shutters.

BRASS SASH BARS, STALL-BOARD PLATES, AND SUN BLINDS FOR SHOP FRONTS.

PROSPECTUSES AND WORKING DRAWINGS FORWARDED FREE ON APPLICATION.

Architects should be particular in describing the description of Shutter they require used.

KELLY'S PRACTICAL BUILDERS PRICE-BOOK; or, Safe Guide in the Valuation of all kinds of Artificers' Work; with the Modern Practice of Measuring, and an Abstract of the New Building Act for regulating the Construction of Buildings. Revised and Corrected by New Calculations upon the present Value of Materials and Labour. Arranged by an Architect of eminence, assisted by several experienced Measuring Surveyors. Illustrated and exemplified by Steel Engravings and numerous Woodcuts. Royal 8vo, price 3s neatly bound.
London: published by T. KELLY, Paternoster-row; SIMPKIN and MARSHALL, and may be had of all Booksellers.
Of whom may be had, New Editions in Quarto, of the following Practical Architectural Works:—

1. PETER NICHOLSON'S PRACTICAL CARPENTRY, JOINERY, and CABINET-MAKING, Revised by TREDGOLD: being a new and complete System of Lines, for the Use of Workmen; founded on Geometrical and Mechanical Principles. Ten parts at 3s or in boards, 30s; containing upwards of 120 Steel Plates, and numerous Woodcuts by Branston.

2. PETER NICHOLSON'S PRACTICAL MASONRY, BRICKLAYING, and PLASTERING (revised by TREDGOLD), both plain and ornamental; containing a new and complete System of Lines for Stone Cutting, for the Use of Workmen; the Formation of Mortars, Cements, Concrete, to which is added a variety of new designs for Mural Tablets, Tombs, Gravestones, Monuments, &c. &c.; and a description of the various materials employed. Ten Parts at 3s or in boards, 30s; containing upwards of Ninety Steel Plates and Numerous Woodcuts.

3. TREDGOLD and NICHOLSON'S Theoretical and Practical Treatise on the FIVE ORDERS of ARCHITECTURE: containing plain and simple Rules for Drawing as I Executing them in the pure style; including an Historical Description of Gothic Architecture. Illustrated by upwards of One Hundred Steel Engravings, executed by Artists of first rate talent, including numerous Diagrams, &c. Twelve parts at 3s. 6d. or in boards, 50s.

4. DESIGNS for COTTAGE and VILLA ARCHITECTURE: containing Plans, Elevations, Sections, Perspective Views, and Details, for the Erection of Cottages and Villas. By S. H. BROOKS, Architect. Beautifully engraved on steel, with Directions for Working, and the estimated Cost of each Edifice. Twelve parts at 3s.; or in boards, 39s.

5. DESIGNS for PUBLIC BUILDINGS, consisting of Plans, Elevations, Sections, Perspective Views and Details of Churches, Chapels, Schools, Almshouses, Gas Works, Markets, and other buildings for public purposes. By S. H. BROOKS, Architect. Beautifully engraved on steel. Ten Parts, at 3s. or 33s. boards.

6. THE HOUSE DECORATOR and PAINTER'S GUIDE: containing a series of Designs for Decorating Apartments with taste, and suited to the various styles of Architecture. By H. W. and A. ARROWSMITH, House Decorators to her Majesty. Ten Parts, at 3s.; or in boards, 33s.

7. THE HOUSE PAINTER, or DECORATOR'S COMPANION: containing a complete Treatise on the Art of House Painting, Graining, and Marbling; including the Origin of Colour, the Laws of Harmony, the Composition of Pigments, Oils, Varnishes, &c. by W. M. HIGGINS, Esq. Accompanied by actual Specimens of Hand-Brush Graining and Marbling. Ten Parts, at 3s.; or in boards, 33s.

THE ENGINEERS' and MECHANICS' ENCYCLOPÆDIA, a new and enlarged edition, comprehending Practical Illustrations of the Machinery and Processes employed in every description of Manufacture throughout the British Empire. Illustrated by upwards of 2,000 Wood Engravings. By LUKE HERBERT, Civil Engineer, &c. The rapid progress of Mechanical Science has developed many of the important facts since the first publication, in 1830, of the Encyclopædia. The Inventions and discoveries recently made have engaged the sedulous attention of the Editor; for, as the value of each was tested by experiment, a description was accordingly prepared. By the selection of new articles, and care in the revision of old ones, this edition has now become systematically enriched; so that it may be received as fully and faithfully expressing "the existing state of Engineering and Mechanism, adapted to the wants of Practical Men." In two large 8vo volumes, cloth lettered, price 30s.

THE ART-JOURNAL for SEPTEMBER (price 2s. 6d.) contains, Three Line Engravings — viz. "A Hawking Party," by C. Cousen, after F. Taylor, president of the Water-Colour Society; "The Decline of Carthage," by J. B. Allen, after J. M. W. Turner, R.A.; and "The Lady of the Lake," by G. Stodart, from the statue by B. E. Spence. The literary contributions include — "Plymouth China," by Llewellynn Jewitt, Illustrated; "Burial Artists: Undertakers' Arrangements," by James Dafforne, Illustrated; "History of Caricature and of Grotesque in Art," by Thomas Wright, Illustrated; "A Bubble from a New Brunnen," by Mrs S. C. Hall; "Art in its Influence on Art-Manufacture," by J. B. Atkinson; "The Architectural Museum;" "The Report on the Royal Academy;" "National Portrait Gallery;" Biographical Sketch of W. Mulready, R.A. &c. &c. The present number also contains the concluding portion of the Illustrated Catalogue of the International Exhibition, which contains specimens of French Bronzes, Porcelain, Lace, and Inlaid Marble work; Arms: Japanese Damascening, and English Medieval Metal work; Porcelain, Cabinet work, Plate, &c. &c. N.B. The Numbers for October and November will contain a History of the Exhibition, and Engravings of the Sculpture therein exhibited.

London: JAMES S. VIRTUE, 26, Ivy-lane.

ROCHESTER MEETING of the ARCHÆOLOGICAL INSTITUTE — The proceedings of this and other Learned Bodies are fully given in the September Number of THE GENTLEMAN'S MAGAZINE (price 2s. 6d.), which also contains Papers on the Buildings of Bishop Gundulph, Investigation of a large Celtic Grave-hill in Cleveland, Commercial Routes of the Middle Ages, The Holy Brigitta and the Church in the North, Proposed Restoration of Winchester City Cross, &c.; together with Correspondence on Irish Round Towers, Anglo Saxon Churches, Site of the Defeat of Eadwine and Morkere, &c.; Reviews; Monthly Intelligence; Obituary; Births, Marriages, and Deaths, Markets, &c.
London: JOHN HENRY & JAMES PARKER, 377, Strand.

TIME IS MONEY.—All who employ Workmen should send two stamps, and they will receive by return of post a SET of SAMPLES of TIME SHEETS and other useful FORMS, by which much time is economised and bookkeeping facilitated.—MERRITT & HATCHER, 2, Grocers' Hall-court, Poultry, London, E.C.

MANUFACTORY, 44, MUSEUM STREET, NEW OXFORD STREET, LONDON.

INTERNATIONAL EXHIBITION, 1862.—CLASS 13. Only Medal awarded for "excellence of construction of Mathematical Instruments."
TSQUARES.—W. F. STANLEY, late STANLEY & ROBINSON'S IMPROVED. Recommended in "The Engineer," "Builder," and "Practical Mechanics' Journal." 12-inch, 5s and 7s. 6d.; 21-inch, 3s. 6d. and 5s. 6d.; 23-inch, 2s. 6d. and 4s.
Mathematical Instruments of every description, of the best possible make, and highest finish, made on the Premises.
Scales, Rules, Reds, Chains, Tapes, Drawing Boards &c &c. Every Article for Draughtsmen's Use.
Lists of Prices on application.
3, GREAT TURNSTILE, HOLBORN, LONDON, W.C.
Price 2s 6d post free.
STANLEY'S IMPROVED DRAWING PEN

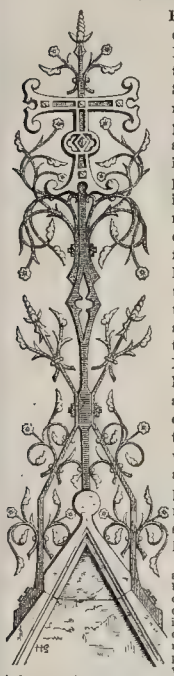
MATHEMATICAL DRAWING INSTRUMENTS, THEODOLITES, LEVELS, CIRCUMFERENTERS, SCALES, TAPES, CHAINS, T SQUARES, RULES, &c.

JOHN ARCHBUTT & SONS,
20, WESTMINSTER BRIDGE ROAD, LAMBETH.
Respectfully inform the public that their Illustrated Price-list will be forwarded free on Application. The prices will be found remarkably low. Every article warranted. Second hand Instruments of all kinds, by the best makers, always in stock.

ELLIOTT, BROTHERS, Opticians to the Royal Family and Government, beg to give notice that they have REMOVED from their temporary premises in Charing-cross, to No. 449, STRAND, opposite the Railway.

CEDAR TIMBER.—THREE fine TREES, each containing upwards of 80 feet, and Two Smaller Ones, lying within a mile of the Newport Station, on the Great Eastern Line, TO BE SOLD, by private contract.—Apply to Mr. WILLIAM RAND, Audley-end, and Saffron Walden, Essex.

TO BUILDERS, CARPENTERS, &c.—WANTED TO PURCHASE, a good JOBBING COUNTRY BUSINESS.—Address, S. S. 6, Doddington-place, Kennington Park, S.



TO ENGINEERS and OTHERS in want of Eligible MANUFACTURING PREMISES and PLANT, with immediate possession, TO BE SOLD in consequence of a dissolution of partnership.—There is a new and valuable plant of engineering tools, with shafting, steam-power, and foundry. The tools consist of self-acting screw-cutting lathes; drilling, slotting, planing, shaping machines, and punching press, by "Kershaw," "Nurr," "Smith Beacock, & Co." and other good makers. The premises are suitable, and in a locality where an engineering firm is required, in the market town of Croydon.—Apply to Mr. BENNETT, Engineer, Victoria Iron Works, Barrack-road, West Croydon.

TO BUILDERS. — For DISPOSAL, a BUSINESS, established upwards of a Century. Returns, 1,000l. per annum. Price, including plant and stock, 250l. Rent of good dwelling and large garden, 15l. Every convenience.—Apply to Mr. HOLMES, Valuer, Trinity-grove, Trinity-square, Brixton, S.

The Builder.

VOL. XXI.—No. 1074.

The British Association for the Advancement of Science.

HE meeting in Newcastle-upon-Tyne, of the British Association for the Advancement of Science, produced in most of the sections, papers and discussions on subjects in which we are interested. The whole proceedings were of an important character. The mineral resources of the district, and the manufactures fed by them, have largely contributed to the progress which this country has made since 1838, when last the Association visited Newcastle; and seldom has there been so favourable an opportunity of comparing the acquisitions of present time, with the possessions of a quarter of a century past. Of this opportunity Sir William Armstrong availed himself. He said:—

"In mechanical science, and especially in those branches of it which are concerned in the application of steam power to effect interchange between distant communities, the progress made since 1838 has no parallel in history. The railway system was then in its infancy, and the great problem of Transatlantic steam navigation had only received its complete solution in the preceding year. Since that time railways have extended to every continent, and steamships have covered the ocean. These reflections claim our attention on this occasion, because the locality in which we hold our present meeting is the birth-place of railways, and because the coal-mines of this district have contributed more largely than any others to supply the motive power by which steam communication by land and water has been established on so gigantic a scale."

The history of railways, he pointed out with much felicity of illustration, showed how grand results might have their origin in small beginnings. When coal was first conveyed in that neighbourhood, from the pit, to the shipping-place on the Tyne, the pack-horse, carrying a burden of 3 cwt., was the only mode of transport. As soon as roads suitable for wheeled carriages were formed, carts were introduced; and that first step in mechanical appliance to facilitate transport, had the effect of increasing the load which the horse was enabled to convey, from 3 cwt. to 17 cwt. Next there were wooden bars or rails for the wheels of the carts to run upon; and then the four-wheeled waggon, in place of the two-wheeled cart, brought the augmentation of the original horseload of 3 cwt. to 42 cwt. The next step in the progress of railways was the attachment of slips of iron to the wooden rails. Then came the iron tramway, with an upright flange of the bar acting as a guide to keep the wheel on the track. The next advance, an important one, consisted in transferring the guiding flange from the rail to the wheel. Finally, in 1820, after the lapse of about 200 years from the first employment of wooden bars, wrought-iron rails, rolled in long lengths, and of suitable section, were made in the neighbourhood of Newcastle. Last of all came the locomotive engine, which enables us to convey a load of 200 tons at a cost of fuel scarcely exceeding that of the corn and hay which the original pack-horse consumed in conveying its load of 3 cwt. an equal distance.

In thus glancing at the history of railways, said Sir William, we may observe how promptly the inventive faculty supplies the device which the circumstances of the moment require.

"No sooner is a road formed fit for wheeled carriages to pass along, than the cart takes the place of the pack saddle; no sooner is the wooden railway provided than the waggon is substituted for the cart; and no sooner is an iron railway formed, capable of carrying heavy loads, than the locomotive engine is found ready to commence its career. As in the vegetable kingdom fit conditions of soil and climate quickly cause the appearance of suitable plants, so in the intellectual world fitness of time and circumstance promptly calls forth appropriate devices. The seeds of invention exist, as it were, in the air, to germinate whenever suitable conditions arise, and no legislative interference is needed to ensure their growth in proper season."

Turning to the consideration of the coal-fields of the district, so intimately connected with the railway system, he touched upon the question of their exhaustibility. The quantity of coal in the world might be considered as practically inexhaustible.

"Turning, however, to our own particular country, and contemplating the rate at which we are expending those seams of coal which yield the best quality of fuel, and can be worked at the least expense, we shall find much cause for anxiety. The greatness of England much depends upon the superiority of her coal in cheapness and quality over that of other nations; but we have already drawn from our choicest mines, a far larger quantity of coal than has been raised in all other parts of the world put together; and the time is not remote when we shall have to encounter the disadvantages of increased cost of working and diminished value of produce."

The discrepancies of estimates, he said, resulted chiefly from the enormous difference in the rate of consumption at the various dates when the estimates were made, and from the different views entertained as to the probable increase of consumption. The quantity of coal yearly worked from British mines, had been almost trebled during the last twenty years. Statistics showed that the average annual increase of the eight years preceding the end of 1861, amounted to 2¾ millions of tons. It was clear that long before complete exhaustion took place, England would cease to be a coal-producing country on an extensive scale. So far as the Newcastle district was concerned, it was generally admitted that 200 years would be sufficient to exhaust the principal seams, even at the present rate of working. If the production should continue to increase as it was now doing, the duration of those seams would not reach half that period. Were we reaping the full advantage of all the coal we burnt, no objection could be made to the largeness of the quantity, but we were using it wastefully and extravagantly in all its applications.

Reference was then made to the possibility of perfecting, or discovering, other motors than those working by steam and by the consumption of large quantities of fuel. He said:—

"The causes which render the application of heat so uneconomic in the steam engine, have been brought to light by the discovery of the dynamical theory of heat, and it now remains for mechanicians, guided by the light they have thus received, to devise improved practical methods of converting the heat of combustion into available power.

Engines in which the motive power is excited by the communication of heat to fluids already existing in the aëriform condition, as in those of Stirling, Ericsson, and Siemens, promise to afford results greatly superior to those obtained from the steam-engine."

Still Sir William did not seem to accord with the common observation, that before coal is exhausted, some other motive agent, as electricity, would be generally applied. Materials must be consumed in either case, and there were none so cheap as coal. Since the date of this address, however, a correspondent of the *Times* has taken a different view of the costliness of battery-action, as involving double decomposition, and endeavours to show that the solution of the problem may be found in Sir William's remark, that motion is convertible into electricity. Sir William referred afterwards to another source of motive-power, that of water descending from heights, as shown in the hydraulic capabilities of the Greenock waterworks. He then spoke of the wasteful expenditure of fuel in the metallurgical applications of coal. We are thus coming to a portion of his address which bore strongly upon a subject to which we gave some slight attention last week. In an ordinary furnace employed to fuse or soften any solid substance, he remarked, it was the excess of the heat of combustion over that of the body heated, which alone was rendered available for the purpose intended. The rest of the heat, which in many instances constituted by far the greater proportion of the whole, was allowed to escape uselessly into the chimney. The combustion also in common furnaces was so imperfect, that clouds of powdered carbon, in the form of smoke, enveloped our manufacturing towns; and gases, which ought to be completely oxygenized in the fire, passed into the air with two-thirds of their heating power undeveloped.

Some remedy for this state of things might be at hand, in the gas-regenerative furnace of Mr. Siemens, wherein the rejected heat was arrested and communicated to the new fuel before it entered the furnace.

With regard to smoke, "at once a waste and a nuisance," Sir Wm. Armstrong having taken part with Dr. Richardson and Mr. Longridge in a series of experiments made in the neighbourhood of Newcastle in 1857-58, for the purpose of testing the practicability of preventing smoke in the combustion of bituminous coal in steam-engine boilers, could "state with perfect confidence that, so far as the raising of steam is concerned, the production of smoke is unnecessary and inexcusable."

He said,—

"The experiments to which I refer, proved beyond a doubt, that by an easy method of firing, combined with a due admission of air and a proper arrangement of fire-grate, not involving any complexity, the emission of smoke might be perfectly avoided, and that the prevention of the smoke increased the economic value of the fuel and the evaporative power of the boiler. As a rule, there is more smoke evolved from the fires of steam-engines than from any others, and it is in these fires that it may be most easily prevented."

But, he was obliged to admit that, in the furnaces used for most manufacturing operations, the prevention of smoke is much more difficult, and will probably not be effected until a radical change is made in the system of applying fuel for such operations.

He continued:—

"Not less wasteful and extravagant is our mode of employing coal for domestic purposes. It is computed that the consumption of coal in dwelling-houses amounts in this country to a ton per head per annum of the entire population; so that upwards of twenty-nine millions of tons are annually expended in Great Britain alone for domestic use. If any one will consider that 1 lb. of coal applied to a well-constructed steam-engine boiler evaporates 10 lb. or one gallon of water, and if he will compare this effect with the insignificant quantity of water which can be boiled off in steam by 1 lb. of coal consumed in an ordinary kitchen fire, he will be able to appreciate the enormous waste which takes place by the common method of burning coal for culinary purposes. The simplest arrangements to confine the heat and concentrate it upon the operations to be performed would suffice to obviate the reprehensible waste. So also in warming houses, we consume in our open fires about five times as much coal as will produce the same heating effect when burnt in a close and properly constructed stove. Without sacrificing the luxury of a visible fire, it would be easy, by attending to the principles of radiation and convection, to render available the greater part of the heat which is now so improvidently discharged into the chimney."

Some notice was then taken of coal-mining, and of means of protection against accident; and the experience of the Monkwearmouth Colliery—less than half the depth of 4,000 feet, the limit assumed as that at which coal could be worked,—and which experience members of the Association had themselves subsequently means of testing, by a descent into the mine,—was quoted to show that the greater depth would probably be attended with an increase of heat exceeding the powers of endurance, and that the computations of the duration of coal might require a considerable reduction in consequence of too great a depth being assumed as practicable. Before dismissing the subject of coal, Sir William noticed the recent discovery by Berthelot of a new form of carburetted hydrogen, possessing twice the illuminating power of ordinary coal gas; and the production by Dr. Odling, of the same gas, by mixing carbonic oxide and carburetted hydrogen, and exposing the mixture in a porcelain tube to an intense heat.

The spectrum experiments of Bunsen and Kirchoff tending to show the identity, in part at least, of the materials of the sun, with those of

our planet, and to corroborate conjectures as to the luminous envelope of the sun; Mr. Nasmyth's discovery that the bright surface of the sun is composed of an aggregation of apparently solid forms shaped like willow leaves; the dynamical theory of heat; the discoveries respecting the absorption and radiation of heat by vapours and permanent gases; and Mr. Glaisher's contributions to meteorology, were all adverted to.

Sir William then referred to the facilities now given to the transmission of intelligence and the interchange of thought. But he observed,—

"While so much facility is given to mental communication by new measures and new inventions, the fundamental art of expressing thought by written symbols remains as imperfect now as it has been for centuries past. It seems strange that while we actually possess a system of shorthand by which words can be recorded as rapidly as they can be spoken, we should persist in writing a slow and laborious longhand. It is intelligible that grown-up persons who have acquired the present conventional art of writing should be reluctant to incur the labour of mastering a better system; but there can be no reason why the rising generation should not be instructed in a method of writing more in accordance with the activity of mind which now prevails. Even without going so far as to adopt for ordinary use a complete system of stenography, which it is not easy to acquire, we might greatly abridge the time and labour of writing by the recognition of a few simple signs to express the syllables which are of most frequent occurrence in our language. Our words are, in a great measure, made up of such syllables as *con, con, tion, ing, able ain, ent, est, ance*, &c. These we are now obliged to write out over and over again, as if time and labour expended in what may be termed visual speech were of no importance. Neither has our written character the advantage of distinctness to recommend it; it is only necessary to write such a word as 'minimum' or 'ammunition' to become aware of the want of sufficient difference between the letters we employ."

Next, he discussed the question of weights and measures, fully adopting views which we have supported in these pages, and to which we may have to revert at some future time, when we shall be disposed to give our best consideration to the arguments which have come from those who do not agree with us, and with Sir William Armstrong, touching the advantage of adoption of the French system.

Several papers on subjects interesting to our readers have been read in the sections. To these we may return. The meeting has been a most successful one. The Association will meet next year in Bath, under the presidency of Sir Charles Lyell.

THE STEEL-YARD MERCHANTS, THAMES STREET: THEIR RISE, HISTORY, AND FALL.

THE so-called improvements now being carried out in the city of London, and surrounding parishes, have caused the fall of many an important building, and swallowed up sites well known to our forefathers of old. In this wise the Charing-cross Railway has been most successful. It has caused the destruction of St. Thomas's Hospital: it has caused a line of anything but handsome structures to be bridged across the Borough: it has passed over many a hallowed piece of ground; destroyed Brunel's suspension bridge; turned the site of Hungerford Market into a railway station; and last, but not least, it has, by means of a City extension, taken possession of the Steel-yard and Dowgate Wharf site in Thames-street, which, as will now be attempted to be proved, has one of the most interesting histories connected with it.

The "Gilda Theutonicorum," afterwards the Steel-yard Merchants of London, was a regular trading company 800 years ago. It gave rise to the famous Hanseatic League, a commercial confederacy first formed on the east shores of the Baltic, in the eighth century, to protect the trade from the piratical incursions of the Normans; thence deriving their name of "Easterlings," who have been styled, by Pennant, "masters in the art of commerce."

These merchants are first spoken of in the second year of King Ethelred II., 979, when the "Emperor's men," as they are called, upon coming in their ships to Billingsgate, were accounted "worthy of good laws." They were not to forestall the markets from the burghers of London; and were to pay toll, at Christmas, two grey cloths and one brown one, with 10 lb. of pepper, five pairs of gloves, two vessels of vinegar, and as many at Easter. The fraternity had a council of twelve, presided over by one of them,—an alderman; for, be it known that, at that period, the jurisdiction of aldermen over guilds was similar to that of lords over their demesne lands, and sheriffs over their hundreds.

The whole confederacy constituting the German or Hanseatic League was very extensive, but the Easterlings were the most famous branch, and were settled in London. The societies abroad were divided into four classes, each having a presiding city, separated east and west. The term "hanse" (Latin, *hansa*) signifies a guild, well understood at that period; for, in King John's charter to Dunwich, 1199, are the words, "we grant them a hanse;" and Henry III.'s second charter to the Steel-yard merchants, 1250, has the expression, "*quod habeant hansam suam.*"

Time went on, and in Edward the Confessor's reign we find London described as "a noble city, frequented by merchants from all parts of the world," and the Hanse merchants frequenting it in true commercial spirit. The "League" was a multitude of merchants of twelve towns on the Baltic, and subsequently increasing to sixty-four, some say even eighty, of the noblest cities in Germany, Sweden, &c.; it thought proper, about the year 1200, to choose for its governor, or protector, the grand master of the German Knights of the Cross.

Among the Harleian MSS. in the British Museum, we find "Grauntes of Privileges by Kings of England, from King Henry III. to Edward VI., to the Haunses or the Stylyards, alias Guildhall Teutonicorum." In 1256, at the special request of his brother Richard, then king of the Romans, Henry III. granted unto Lubecke (one of these Hanse merchants) privileges for seven years; and we find in the same reign the citizens of Cologne paying Henry thirty marks to have seizen of their Guildhall in London. Again, in 1266, at the humble suit of Henricke, Duke of Brownswicke, the said king granted to Lubecke and others, for ever, those valued privileges confirmed by his successors, the three Edwards; and it is generally agreed that these grants were obtained in consideration of services rendered by the Hanseatic ships in the time of war. So powerful, indeed, were they, that they did alone most of the foreign trade, being assisted greatly by Edward III.'s patronage.

The "Steel-yard" itself, where the London guild met, will be noticed presently; for we deem the history of the company worthy of first attention. Within the building, however, partitioned in separate cells, the brethren lived under strict regulations. They had a common table, though probably they themselves were divided into parties, each having a head or master. All brethren were single; for, if any married an Englishwoman, or kept one, he lost his house and became disqualified. No housekeeper was allowed: none was allowed to sleep out of the Steel-yard; nor were the transactions within to be communicated to the Londoners without. The council of commerce was a private and selected assembly. The directory of the factory or trading part was vested in an alderman, two deputies or co-assessors, and nine councilmen; the whole forming the chamber of commerce. They met every Wednesday, in summer at seven, in winter at eight, in the hall at the Steel-yard, to settle disputes (then frequent) and other matters. The residents were classed in three divisions. Cologne, and towns on the other side of the Rhine, was one: Westphalia, the Netherlands generally, the Lower Rhine, and the Saxon and the Wends, formed the second; and the Prussian, Lithuanian, and Scandinavian towns the third. On New Year's eve a general assembly took place. Each department elected four members, making twelve; but if none could be found fit in either department, the alderman, their president, nominated the remainder, so as to make the twelve. The new alderman was then chosen by ballot and majority, the two co-assessors were elected, and the following oath taken:—

"We promise and swear to keep and maintain the rights and privileges of the merchants in England, and all laws and ordinances, to the best of our abilities; and to deal justly towards every one, he he rich or poor, in all affairs of commerce, without malice. So help us God and all his saints."

Then the retiring alderman gave up his key to his successor, and then he and his two co-assessors swore in the nine councilmen. A past alderman was ineligible for office for two years; yet he might be a co-assessor or one of the council at any time. Fourteen days after the meeting another was held, and the privileges and statutes read over. The alderman, if absent on his own or other business out of the City, had his duties performed by one of the other eleven members: if out of England, then a general meeting appointed a temporary successor. A member leaving England, another was elected in his place. He who refused office on election was fined forty shillings, and on refusing a second election was deprived of privileges: refusing to go beyond sea or elsewhere in the name of the treasurer, he was fined (unless sufficient excuse were made) one hundred shillings: if a second time, he lost his privileges. To speak disrespectfully of the alderman involved a fine of forty shillings and begging the alderman's pardon in open court. If the alderman commanded a member not to leave London without permission and he disobeyed, then the sergeant arrested and imprisoned him. Other privileges, &c., will be noted in the following data:—

1282. 10 Edward I.—"Bisshoppesgate," lying eastward of the City, being greatly decayed, a prolonged dispute took place between the mayor and commonalty of London and the said Hanse merchants, otherwise merchants of Almanie; the merchants having undertaken always to repair that gate in exchange for the privileges granted them. The contending parties appeared before his Majesty's Treasurer and Barons of the Exchequer, who, on evidence, at once decreed that the mayor, &c., of London should at once compel the said merchants to repair well the said gate. Whereupon Gerard Merbode, alderman of the Hanse, with six of the members of the guild then in the City, undertook for themselves and successors the following: To pay 240 marks sterling ready money towards the repair, and that they would at all times repair, keep, and defend one-third part of the gate; the City sustaining and defending the other two-thirds of the gate (below). And for peace and final agreement, the mayor and citizens did grant the said merchants and their successors the liberties as they had before enjoyed; and further, for the said repair and defence, that they should be acquitted of all "murage," otherwise contributions for repairs of walls; that they might harbour all corn which they brought to the City for sale, free; that they might sell such corn within forty days afterwards at their own hostels and granaries, unless the mayor, king, or corporation should, by reason of the dearness of corn, prohibit it. Also, that they should have their own alderman as before, provided he be a freeman of the City, and that when elected he took oath before the mayor and alderman of the City, to serve, protect, and otherwise obey and attend to the City's rights and privileges; the merchants on their part agreeing at any time to be distrained for the keeping of the said gate. And for the better performance of the same agreements, a "chirograph" or writing was made between them, in the month of June, 1282, and the king's exchequer seal thereunto affixed.

1301. 29 Edw. I.—At an inquisition taken before the mayor and aldermen, the 8th December, respecting the measurement of corn and salt, it was ordered,—

"That no meter, or any servant of theirs, shall interfere between buyers and sellers; and that such meters shall not go for the purpose of meting corn beyond the Hall of the Teutonics" [or Hanse merchants].

1377.—Charters and privileges confirmed and delivered to the merchants in the great chamber at Westminster, by the Archbishop of Canterbury, in the presence of the Lord Treasurer, Lord Privy Seal, Master of the Rolls, &c.

1388-1390.—Conradus Holner, Great Master of Prussia, was about granting that all English merchants should be free there; but dying, his successor granted this privilege, which was confirmed by Richard II., who, in 1389, appointed John Bewyes, a city merchant, governor of these merchants in Prussia, and in 1390 confirmed it under great seal.

1400.—Henry IV. confirmed their charter, with certain conditions already made, as to fealty, &c.

1462. 2 Edward IV.—His charter to the city of London, dated November 9th, certifying city customs, and taxing the citizens of London, particularly states that—

"This our present grant be not in prejudice or derogation of any grants by us or any of our progenitors made or granted to those merchants of Almanie which have an house in the city of London, which is commonly called the Guildhall of the Almanies, or their successors."

1493.—The Easterlings, or Steel-yard merchants, had for many years enjoyed the liberty of importing cloth, &c., from Flanders, &c. The other city merchants were greatly displeased at this monopoly, which decreased their business, and compelled them to discharge many servants; and the King, Henry VII., was glad of a trifle to revenge himself on the Flemings for their having countenanced the impostor, Perkin Warbeck. The London mob took the hint, and the result was a great riot at the Steel-yard, in which much damage was done, and was only stayed when the mayor and aldermen came to the merchants' assistance. Eighty servants and apprentices were taken (not

one householder), and some imprisoned in the Tower. It was one of those "'prentice riots" of the olden time. The Drapers' Company paid 11s. 9d. for lights, banners, ale, candle, &c., in keeping men to watch the Steel-yard for seventeen days against the riotors.

1531.—In an Act of Parliament, 22 Henry VIII., c. viii., it was enacted that the merchants of the House of Almaric, "commonly called Guildhall Theutonicorum, otherwise called the Merchants of the Stilliard in London," should be exempted from the payment of all king's taxes within the said city.

1577-8.—Among the Harleian MSS. is "A note of all such clothes and kersies as have been shipped out of the porte of London by m'chaunts straungers for Hambroughe, from the Feast of St. Michael, 1577, to the same 1578, by 41 merchaunts;" and this is probably the dying speech of the Steel-yard Company.

Their privileges, with those above described, consisted of their being under the jurisdiction of the Court of Admiralty; of its being illegal to arrest a Hanse merchant except on very serious grounds; of their power to remove their houses or officers; their right to receive from the king's customs drawbacks on their exports; that the city and corporation of London should accept any commercial treaty, though against themselves; that they were permitted to sell wine by retail; to keep a stilliard or balance to weigh or measure goods in every town; to pay but very moderate custom dues to the king, &c. There was a subsidy raised from every Hans living in England of 40s., and from those residing only six weeks, 20s. a year. Any person leaving without paying this tax, made his landlord liable. Those made denizens paid 10 marks per annum. They traded in the various commodities of commerce; iron, steel, and cloths being among the list. Their trade, however, gradually declined; and, in the reign of Edward VI., their privileges were declared void, their franchises forfeited, and their corporation dissolved; and they themselves ceased to exist in name in the reign of "Good Queen Bess."

The Steel-yard was in the parish of Allhallows, Thames-street, in the ward of Dowgate; or as may have been already understood by those acquainted with London, it lay between Cousin-lane and Allhallows Church. On its east formerly stood the magnificent mansion called Coldharbour, first mentioned 13 Edward II., and afterwards the residence of Sir John Poulteney (four times Lord Mayor), of two dukes, two earls, a Prince of Wales, and Tonstal, Bishop of Durham. The Steel-yard was the principal factory of the Hanse merchants in London. It bore the name of "Gilhalda Teutonicorum,"—the German Guildhall. The term Steel-yard is thus explained by a German writer: It is a contraction of stapelhoff, softened into Stalhoff, synonymous with the English staple, otherwise a general depôt for imported merchandise. Steel was only one of the articles imported. As business increased their warehouses and premises increased too; and in 1393 they took adjacent premises with a river quay for the proprietor. One named Lyons was killed in a quarrel on the establishment. The merchants built Windgoose-alley, so as to bring their two houses together. Subsequently they took another house, belonging to John Rainwell, called the Steel-yard; and Edward IV. granting them full possession in the treaty of Utrecht, they became the Steel-yard merchants, and their entire premises were called the Steel-yard instead of the Guildhall. They made it of great strength with thick walls and three gates, Stow adding that "the middlemost whereof is far bigger than the other, is seldom opened, and the other two are now (1598) mured up: the same is now called the Old Hall." The yard had been shut up the preceding year, when the Germans had been expelled the kingdom.

Pennant tells us that in their hall were Holbein's two famous pictures, "The Triumph of Riches," and "Poverty." At the break-up of the guild they were supposed to have been taken to Flanders; then to France; and in Pennant's time supposed to be in the possession of M. Fleishman at Hesse Darmstadt. In Hollar's view of London, 1641, the Thames front of the Steel-yard is represented fenced in by a breast-high wall, the width of the open part of the yard, originally flanked by large piles of masonry, but at that period lowered into sheds, and exhibiting remains of Tudor-fashioned windows. From these sheds and walls stretched, as far as Thames-street, ranges of warehouses on each side, with a high octagonal-shaped tower rising amidst the buildings on the east side, and which probably was the bell-tower of the once monastic-like foundation, or the watch-tower when the "'prentice" and other riots were then in vogue. Two landing-places, then termed bridges, with steps from the river, are also seen.

But the glories of the Steel-yard, if antiquity may be termed glorious, had already departed; though in 1732 it was considered one of the remarkable things in the parish of All Hallows. In 1802, a fragment of the stone wall remained incorporated in the wall of brick. The name existed too. The front had a long blank wall with arched gateway; a pavement in front, in Thames-street, about 2 feet wide; and the spread eagle surmounting the gate. It had, with the Dowgate wharf adjoining, long been used by the dock company as wharfs and warehouses for iron and steel bar goods, &c.; and at last, some six centuries after the Hanse merchants had commenced their career, and some three centuries after they had ended it, one of the iron roads of England has taken the Steel-yard for itself.

On the 9th of July and the 5th and 25th of August, 1863, in about 380 lots, Messrs. Willis & Harrow sold the building materials of the well-known Steel-yard, the adjoining Dowgate Wharf, and the Falcon Tavern, with a range of warehouses in Cousin-lane, the site of which had been purchased, as already mentioned, by the Charing-cross Railway Company for the purposes of their City Extension. In years to come, when the roar of the locomotive is heard as it enters the city of London from the bridge across the Thames, drawing its precious freight behind it, few will know that the site they are crossing belonged anciently to a fraternity styled by Anderson the "most eminent mercantile confederacy, which is not to be paralleled in either ancient or modern story, and of its ancient privileges in England."

ANTIQUITIES IN ROME.

JUDICIOUS improvements have been carried out of late years, at the Museum of the Capitol, whose halls and corridors, neither built nor at all adapted for display and sculpture, had been formerly left in a state of neglect, dingy, ill-lighted, and uncleanly, by no means to the credit of an institution so celebrated. As for *lighting*, we cannot say that this is yet adequately arranged; nor can we find excuse for the fact that many works of art here are left so discoloured by causes that have affected their marble surfaces, as to be greatly injured, some of the most valuable most suffering in effect. What may be commended is the colouring of the walls and ceilings, with tints in which predominates a dark maroon, suitable to a background for statuary, and borders of gilding or colour round the reliefs set on wall-surfaces; this decoration on the coffered ceilings being carried to a degree absolutely gorgeous. The bronzes, not a large collection, have been separated from the marbles, to occupy a small room on the ground-floor, contiguous to which now open two other chambers recently appropriated to sarcophagi, altars, and epigraphs, Christian and Pagan, the former mostly from the *Ager Veranus*, or catacombs, on the Tiburtine Way, above which now extends the public cemetery of S. Lorenzo; the range of non-funereal inscriptions, in this collection reaching from the epochs of Pagan emperors, and Valentinian and Theodosius; and a modern tablet, above the entrance, tells us how this compartment was added to the museum by the eight "Conservatori" of Rome, *anno urbis conditæ*, 2616. But the most interesting recent addition to the art collection of the Capitol placed, about a fortnight ago, in the "Hall of the Dying Gladiator" (though not for permanence), is a statue of the elder Faustina, the scale heroic, and therefore less than colossal, representing the wife of Antoninus Pius as deified, with the attributes of the goddess of plenty, a patera in the right, a cornucopia filled with fruit in the left hand; the hair simply braided, without diadem or other ornament; the dress a tunic of light material, skilfully treated by the artist, a more substantial pallium enveloping the body from the waist downwards, thrown over the left arm, traces of pink colour being distinctly visible near the borders of this vestment; as also, when the statue was first disinterred, remnants of gilding were seen in the hair, and of red tinting (no doubt, the *minium* mentioned by Pliny) on the cheeks, no longer visible; the countenance handsome, but somewhat haughtily characterized, nor, though indeed intellectual, either animated or pleasing. Apparently representing a woman of about forty years, with full and majestic figure, this statue may be criticized unfavourably for the heaviness of its general outlines, and the inferiority of conception and details of treatment. It is the only antique full-length of the empress, deified by her too fond husband (blind, it appears, to many errors), whose name is still read on the temple he dedicated to her in the Forum; and was disinterred in the Villa Negroni, shortly after the works had begun on that site for founding the new railway-station, by Signor Guidi, who has done much in the search for buried antiquities; by him presented to the pope, and eventually by his holiness to this museum, after a restoration in parts where the figure was slightly injured, by the sculptor Galli. The more admirable statue of Augustus, found at the Villa of Livia, on the Flaminian Way, has been purchased by the chapter of S. Maria, in Via Lata, on whose estate the excavations were made, and by them presented to the pope as contribution to the "Peter Pence." It is now at the studio of Tenerani for the restoring requisite.

On the lower slopes of the Palatine, along the northern and western side, works of excavation have been progressing for some time, in grounds once purchased by the Emperor of Russia, but now belonging to this Government, by which the present undertaking has been ordered. The decorative paintings on walls of chambers brought to light here have attracted notice, and been reported on at the Archæologic Academy. Several small figures, one a lady at her toilet, birds, festoons, interspersed with designs of architecture in light fantastic style, and candelabra, one very gracefully imagined in materials entirely of flowers and tendrils, divided near the centre by an eagle standing on a globe, are the discoveries most noticeable, the character of these works reminding us of Pompeian art, not distinguished by anything more than a certain fantastic gracefulness; but the discovery most important to archæology is the outer side of the ancient gateway, with jambs and archivolt of fine brickwork, whose *inner* front was brought to light in the excavations ordered by the French Emperor, and directed by Signor Rosa, on the higher grounds of this hill; that gateway being identified, it seems, on just theories, as the Porta Romana of the "Roma Quadrata," or whatever was the primitive city that first comprised, within its fortified circuit, the entire Palatine height. Should it appear that these remains are really connected with the stupendous constructions in lithoid tufo, found a few years since under the church of S. Anastasia, below the Mount's north-western angle, the light obtained for its antiquities, and for the illustration of Rome's earliest history, would indeed be important. Visiting these ruins on the 1st of July, we saw a pavement of marble mosaic, laid simply in black and white squares, and some portions of painting, architectonic in subject, both discovered by the labours of that day; and we were glad to hear that no fewer than forty men were daily employed here. Returning to the spot on the 7th of August, we did not observe any remarkable addition to the results formerly obtained by these labours; but the removal of soil had completely uncovered the ancient gateway, which, now entirely exposed, and seen to be of no other than brick masonry, must be considered in its present state a restoration of the Imperial period. On the same line with this gateway, but divided from it by a long extent of ruins against the hill-side, is the singular construction in regular quadrate stonework, discovered in 1847, and having evidently the character of fortification, assumed to belong also to the primitive "Roma Quadrata."

The sessions of the Archæologic Academies are suspended during the sultry season; as also the excavations in Catacombs, those at the Villa of Livia (to be resumed), and most similar undertakings.

THE "LUNGS OF LONDON."

CONSIDERABLE exertions, certainly, have been made of late years, to improve and to increase the number of the parks of London; and we are glad to recognize the progress of taste in the arboricultural and floricultural arrangements of these open spaces. The general planning, also, is improved, though there is yet room, in their distribution, for that high art of landscape-gardening which includes the use of architectural and sculpturesque objects and features.

During the early part of the present season and up to the present time, the Regent's Park has been undergoing one of the most important changes that have taken place in it since it was first laid out. The most attractive parts of the park have been turned into garden walks; and in the "First Park," so called from its being the first division near the entrance to

the Marylebone-road, the transition from what was previously a broad path, lined with trees on each side, is great; though only one portion of the work was complete when last we were in the locality. The large chestnuts have been cut down. Whether destruction of trees that take long to grow, is necessary so often as it seems thought to be, judging from the frequency of the destruction, we must decline saying at present. The number of dead trees in the parks, however, appears to us increasing. In place of the chestnuts in the Regent's Park, the ground has been laid out and filled with choice shrubs and flowers. The space on the left side of the First Park is divided into about forty circular and parallel patches, which are neatly railed round; and, in addition to a beautiful display of costly flowers, each patch — round which paths have been formed, terminating in a large one in the middle — is ornamented with a large vase of stone. Several other improvements have been carried into effect. Two fountains have been placed,—one near Gloucester-gate, and the other in the middle of the Broad-walk; the space around the latter being ornamented with exotics, &c. Mr. Cowper has the credit given to him of the entire direction of these works.

In Battersea Park, under the same direction, the whole extent of the ground, large portions of which till recently have been lying waste, has been tastefully laid out and arranged, and divided into long lines of flower-beds, similar to those in the Regent's Park. The walks along these beds have been contrived with a view to the best effect; and several of them, which are as long as the width of the park, have a charming aspect, the flowers down the entire lengths being of varied hues and neatly railed with galvanized wire. The latest improvement, effected within the last few weeks, is near the south entrance, in the Battersea-road, where a long oval bed has been laid out, intersected with circular patches. The beds are stocked with the choicest flowers and English and foreign exotics, and are planted with great taste. The road round the park has been completed, and is daily thrown open for carriages and horsemen. The lake is stocked with different species of wild fowl. Battersea Park, and the bridge which connects it with Chelsea, were formally opened to the public in the spring of 1858. The first Act of Parliament for originating the park passed the Legislature in 1836; but it was not till further Acts were passed to enlarge the powers of the Commissioners of Woods and Forests in 1848, 1851, and 1853, that steps were taken to turn the waste ground, then known as Battersea-fields, to what it is now acknowledged to be, "the garden of the south of the metropolis."

It is to be regretted that on Sunday afternoons, about the end of the bridge and entrance to this park, the demeanour of sundry "roughs," and dust-raising children, should be of a tendency to deter many persons from visiting the park. For the mutual improvement of classes, and the mutual sympathy and appreciation, it is essential that the classes should be induced to mingle together, if only out of doors; and the object will be retarded so long as the holding-aloof and bearing of one class seem to be justified, to whatever extent, by the appearance of violence or rudeness in another class, and by a scant attention to personal cleanliness.

Indeed, much might be said of the necessity for some better regulation of the crowds in St. James's Park and the Green Park, than has existed since greater freedom of access has been allowed, as it has been very properly. It is a question whether it would not be better to institute, generally, public playgrounds, in appointed spots, in the present parks or elsewhere, than to permit the destruction of the grass, which results from the games of leap-frog and other athletic exercises as now permitted.

As to the appearance of those who congregate in the parks, we can only say, we regret that the *blouse* is not part of the attire of the British workman; and that there should be below the industrious class, another numerically so large, a *classe dangereuse* possibly, which requires the green sward as sleeping-ground by day; and which in repose or in action, does not enhance the beauty of the scene, or the feeling of security of many persons who require walking-exercise, free from molestation. In the Green Park, seldom is the grass not littered over with bits, or half-sheets, of greasy newspaper, and other remnants of meals. Last year, during the Exhibition time, always, the effect of the grass was disgusting rather than refreshing. There is a class of houseless people in London who must be cared for; there is improvement still needed in the water-supply, to the end that every one may have the means of ablution; but real liberty of the people involves consideration for other classes, as well as for the suspected, or even the really unfortunate; and were it possible to make at least personal cleanliness a passport of admission to the parks, we apprehend that the course would be most consistent with their intended uses, and with the welfare of every class desirous to resort to them.

As to Finsbury Park, the agreement for the purchase of the land required for the formation, has been signed on the part of the Metropolitan Board of Works and the proprietors of the land; and the price to be paid is to be settled by arbitration. The site will embrace the whole of Hornsey-wood, and the land lying between the Great Northern Railway and the Green-lanes, northward of the Seven Sisters-road, as far as, and including a portion of land on each side of the New River. The whole of the park will be situate within the parish of Hornsey, and thereby not included within the limits of any metropolitan borough.

Whilst attention is given to the parks existing, or about to be provided, more is needed to be paid, and promptly, to the circumstances of numerous open spaces, which are at the outskirts of the metropolis, but are rapidly becoming surrounded by houses; and to forests, heaths, and commons farther distant, which are almost as valuable as are the parks within the metropolis, as "lungs of London." These extra-oppidan spaces have a beauty of their own, for which we would scarcely exchange even the highest art of landscape-gardening. Many of them are so threatened, that unless prompt attention be given they can hardly fail to be lost. Wandsworth-common is one of the number. Upwards of 200 copyholders, rate-payers, and inhabitants of Battersea have signed a memorial to Earl Spencer, the lord of the manor, in which they say:—That during the past few years, inclosures to the extent of upwards of 100 acres have taken place on the common; that within the last few months an inclosure to the extent of eight acres has been effected by the Brighton Railway Company; and that a footpath has been stopped, so as to take away a pleasant and much-frequented part of the common. For centuries, the memorialists say, the parishioners and their families have enjoyed undisturbed the healthy walks; and that the custom of years has given them an apparent right to this enjoyment. They therefore view the encroachments "with deep sorrow and regret," as if permitted to go on, these must, at no distant period, lead to the entire extinction of Wandsworth-common. The memorialists pray his lordship to exert his influence to preserve to the public the privileges which have been enjoyed, and to institute such inquiries with reference to inclosures not sanctioned by him, as will lead to their speedy removal, "and secure to the public, the inhabitants of Battersea, and their children, the continuance of those rights they have so long and so freely enjoyed."

To be wanting open spaces in London, and to be sacrificing those which are at our doors, are two courses of proceeding which do not seem economical or logical.

PROGRESS OF CO-OPERATIVE SOCIETIES.

A REPORT has been published in reference to co-operative societies. The extraordinary rapidity with which these societies were multiplying, many of them not merely confining themselves to the buying and selling of goods, but entering largely into manufacturing pursuits, with capital to the amount of many thousands of pounds, excited the attention of the Government; and Mr. John Tidd Pratt, the registrar of friendly societies in England and Wales, was instructed to prepare a report to Parliament on the subject. This report was compiled from the printed returns of 326 societies in England, and six in Wales. A separate return was made for Scotland. Of the English societies, it appears there are 98 in Lancashire, 64 in Yorkshire, 50 in London; while the remainder are to be found scattered over almost every county. The number of members admitted to the 332 societies during 1862 was 24,308, while 11,529 withdrew. The total number of 1*l.* shares held in these societies was 351,613, and the sum of 111,347*l.* was received for shares during 1862. The amount of share-capital withdrawn during that year was 172,561*l.* This excess of withdrawal was entirely owing to the cotton famine, and was almost wholly confined to Lancashire and Yorkshire, being, as might be expected, heavier in the former county. The Rochdale Pioneers' Society, for instance, withdrew last year 22,027*l.*, against 6,321*l.* invested, leaving, however, the large capital still of 33,961*l.* From the Rochdale Town Mill the amount withdrawn was 13,732*l.*, against 5,437*l.* invested. The Bacup Society paid out 18,122*l.* against 3,012*l.* invested. Heavy calls were also made on the capital of the stores at Manchester, Oldham, Bolton, Bury, Blackburn, and other towns. The only exceptions to the rule in Lancashire were the societies of Liverpool, Burnley, Blackley, Over Darwen, Clitheroe, Prestwich, Rhodes, and Tottington. In Lancashire itself the total amount withdrawn during 1862 was 134,873*l.* The same societies received during the same period, in the shape of investments, 65,874*l.*; and at the close of the year their subscribed capital was 264,391*l.* Although 172,561*l.* was the total sum withdrawn from the 332 societies in 1862, the share capital left was 429,315*l.*, or more than four times the amount withdrawn. The total amounts paid for goods by those societies who only buy and sell provisions and clothing, in 1862, was 5,067,867*l.*, and the amount received for goods 2,331,650*l.*, leaving a profit of 165,770*l.* The total expenses of these 332 societies for the year, including management, rent, taxes, repairs, &c., amounted to 135,588*l.*

Since Mr. Tidd Pratt's report was published, the report of the Rochdale co-operators, stating the present position of their societies in that town, has appeared. This town is the parent of co-operation, as it now exists. The report is brought down to June 30, 1863. The Rochdale Equitable Pioneers' Society then consisted of 3,630 members, being 70 more than in April last. The capital of the society was 42,349*l.*, being an increase of 1,446*l.* since the last quarter; cash received for goods sold during the quarter, 37,844*l.*, being 2,064*l.* more than in the previous month; cash in bank, 8,066*l.* The profit on the quarter was 4,677*l.*, which, after paying interest on shares, depreciating fixed stock account, *and applying 2½ per cent. to the educational and library fund*, gave 2*s.* 4*d.* in the pound to members on their purchases. The Rochdale Town Mill Society has a capital of 236,206*l.*, being an increase during the last three months of 2,887*l.*; cash received for sales this quarter, 37,743*l.*, giving a profit of 2,863*l.*, which, after paying interest on shares, &c., leaves 1*s.* 4*d.* in the pound on purchases. The Rochdale Manufactory Society is working its mill full time. It has a capital of 80,000*l.*, 6,000*l.* having been paid in within the last three months. This society has a second mill, just erected, which it is now fitting with the requisite machinery. The Rochdale Building Company has twenty-three houses, erected at a cost of 3,000*l.* all tenanted by members. In the report of the Scotch registrar, he says:—"Co-operative societies in Scotland are increasing and prospering. Many of them have special funds for education and the establishment of libraries."

THE DROUGHT AND HEAT OF THE SEASON.

FOR many years there has not been so hot a summer on the Continent as that which has just ended; and both there and in this country the drought has been very great. Considering the influence of rain and sunshine on building construction, and on such questions as those of site, drainage, damp, and sanitary influence in general, the subject is one of decided importance to architects, and as such merits notice on the present occasion.

It almost looks as if a serious error had been committed in the selection of Aldershott as a site for a barrack-town; for, the drought has been so great this last summer as to compel the troops to quit the place altogether, from want of water, and migrate to Sandhurst, Woolmer, and other localities where the blessing of an abundant supply of good water is to be obtained for both men and horses; so that the permanent barracks and huts of Aldershott have been almost depopulated on account of the drought. Before their departure the horses had in many instances to be taken a distance of upwards of a mile from their stables to drink. The water in the reservoir at Bourley became so low that it was under the minimum quantity deemed requisite in case of fire.

In Paris and its vicinity no such drought and heat have been suffered for many years as during the past summer. Indeed, as regards heat, during the last 158 years it has probably only once been warmer than it lately was on certain days. The thermometer last month reached 39 degrees (102 degrees Fahrenheit) in the shade, which implies

something like the scorching heat of 65 degrees in the sun! In Paris it is very rare for the thermometer to rise above 36 degrees in the shade. The river Seine fell to the level of the great drought of 1719, which forms the Zero line of the metrical ladder on the Pont Royal for measuring the depth of the river. This is only the second time of such an occurrence for nearly 150 years, and the first since the year before the comet of 1811. The waters of the Loire, too, have never been known to be so low as in the season just past. This great river, which has so often ravaged the country for leagues by its excesses, was latterly crossed where it meets the Nièvre and Cher, both on foot and in carriages without either difficulty or danger.

The drought and heat in Austria have been extreme; as also in Italy, and especially at Rome. In Germany, too, water became both scarce and dear. The drought at Aix la Chapelle was such that water sold at 15 groschen, or 1s. 6d. a barrel.

Some few years ago there was a considerable drought for successive seasons, but not to so great an extent, it would seem, as in the present year. At that time, it may be remembered, there were serious fears that the rainfall was permanently diminishing. Since then, however, there have been very wet seasons which have tended greatly to restore the average; and doubtless sooner or later we may look out for a recurrence of the like compensatory process.

SANITARY CONDITION OF OUR TOWNS.

BRIDGWATER—KESWICK—WHITEHAVEN.

Bridgwater.—Scarlet fever is said to be raging in the parishes of Nether Stowey, Over Stowey, and Spaxton. The attention of the local board of guardians has been drawn to the subject, and the medical officer of health appealed to for his opinion and advice.

Keswick.—Smallpox has of late been very prevalent in Keswick, which is just one of those places, like so many others, where disease in all its protean forms may fairly be looked for. Little seems to have been done since last year,—when typhoid fever, as our readers may recollect, so alarmingly prevailed,—except it be in the use of limewashing. Weak solutions, however, of Condy's permanganetic fluid have been poured down every drain, and the alleys and drains sluiced, after the use of the fluid alluded to, with abundance of water. The solid refuse of the town has also been cleared out, and the sites covered with hot lime. But why should accumulations of refuse have been allowed after the sad experience of last year? Besides, the very removal of these in the hot season is likely to be of itself a source of danger to health and life. Many persons have been vaccinated since the smallpox broke out.

A dreadful responsibility rests on those who have so long opposed the carrying out of efficient sanitary measures in Keswick. At the adoption of the Public Health Act in 1852, the opponents of that measure took possession of the local board. They also refused to adopt Mr. Rawlinson's suggestions to have the waterworks and sewers under their care, while now the revenue from the waterworks alone would repay the interest of the whole sum required in 1852 to make both drains and waterworks. During the last ten years, at least 100 lives have thus been lost, over and above a very full average mortality. The constitution of the local board of health, however, is understood to be now better than it was: hence the comparative promptitude with which sanitary palliative measures have been adopted on the present occasion.

Whitehaven.—Matters are no worse here than they were at the time of our last report, and the fever is still said to be abating. The inhabitants, however, have a Committee of Public Safety to see to what the Harbour Trustees, who are the local authority for carrying out the Nuisances Removal Act, have neglected to do. It is to the committee of safety, it appears, and not to the trustees, that recent active measures are owing. The application of the Public Health Act to the town is now talked of.

It is high time, indeed, for the inhabitants to take upon themselves to apply the spur to their governing body. So long ago as 1849, Mr. Rawlinson gave a graphic and startling description of their sanitary condition, and pointed out the means by which it might be improved. He reported "that the town and suburbs of Whitehaven are very unhealthy, and particularly liable to epidemic and endemic diseases at all times; that the epidemic of 1846, 1847, and 1848 was peculiarly fatal, to the extent of 851 deaths in excess over the year 1842; that the cholera prevailed in 1832, and may be again anticipated should the town be left in its present condition." Again, "that the excess of disease may be distinctly traced to close and confined courts, over-crowded room tenements, damp and ill-ventilated cellar tenements, want of sewers and drains, with an almost total want of privy conveniences, to a scarcity of good and wholesome water, and to many public and private nuisances which exist in the most crowded parts of the town,—such as private slaughter-houses, cowsheds, stables, pigstyes, open middens, and (so called) public privies." How little has been done to remedy the evils thus referred to, the descriptions of Whitehaven as it now is, which have appeared in the *Carlisle Journal* and other local papers, fully explain. The miserable and disgusting spectacles which Mr. Rawlinson witnessed in 1849 are still visible in 1863; and it has not been till the fever has emerged from the dark recesses in which it had rioted unseen for many years, and made its appearance in unexpected quarters, that any remedial measures have been applied. Long ago, according to the statements made at a recent public meeting, the authorities were urged to act, and to take timely measures to avert the approaching evil, but the warnings were entirely disregarded until unfortunately it was too late.

SEWAGE UTILIZATION AT LEEDS.

AT a recent meeting of the Town Council of Leeds, attention was called to a scheme for the promotion of a company, having in view the disinfection and utilization of the contents of ashpits and privies, by a method suggested some time since by Dr. Bishop. On the recommendation of the nuisance and scavenging committee and the corporation, it was determined to place in the hands of the company the north and north-east districts of the town. There, experiments are to be conducted involving an expense of 7,000*l.*; the ratepayers, however, not being called upon for any larger expense than that now incurred for clearing the ashpits.

The company will reimburse themselves by the sale of the manure after it is deodoriaed on Dr. Bishop's plan; and if the experiments in the north and north-east should be successful, it is not improbable that the area of sanitary improvement will be extended to the whole township, involving an estimated outlay of 35,000*l.*, which will also be borne by the company.

In bringing forward the subject, Mr. Alderman Carter referred to the Eureka Company, whose system of operation, as far as removing privies and ash-pits were concerned, the nuisance committee considered perfect. Dr. Bishop to some extent had avoided the evil of allowing the compound fœcal matter to ferment, and the liquid to evaporate, as was the case with the Eureka process. His produced little or no effluvia; but it was proposed to take the whole of the Leeds drainage district, and remove the offensive matter upon the same terms as the average cost to the borough in doing the work for the last three years. Instead of giving the whole district, however, the committee proposed at first to let the company only work in the north and north-east wards. The mortality in Leeds had been already 1,000 odd this year, more than in 1862. In the north and north-east districts the mortality had been, since this year commenced, at the rate of 42 in 1,000 of the population. The committee had endeavoured to fathom the cause of this, and he (Mr. Carter) had no doubt that it arose from the accumulations of night soil, and from the prevalence of that vicious ashpit system which caused such mortality in Leeds, as well as in Bradford, Sheffield, Manchester, Liverpool, and every town which permitted the same state of things. He adduced facts from New Wortley in support of the view. If the council would assign the districts for Dr. Bishop's experiment, the registrar's returns would in due time show the extent to which it had been effectual.

Councillor Middleton having ascertained that the council would have to pay only 4d. or 6d. a ton for the removal of the night-soil, called the attention of the nuisance committee to the very unsatisfactory way in which the ash-pits were emptied. The worst places—the filthy yards and alleys—were neglected because of the trouble of wheeling to them and getting the filthy matter into the carts. He agreed that the ashpit nuisance was one of the greatest, and that the plans on which the pits were constructed generally were most objectionable. As for the expense of 4d. or 6d. a ton under the arrangement with Dr. Bishop's company it was a matter of little importance, because, if people died from noxious accumulations, in a large proportion of cases the families came upon the rates, and not only was there a great loss of lives valuable in themselves, but the ratepayers were put to very heavy and permanent expense.

In replying to the question whether there had been any practical experiments to test the commercial value of the material after the application of Dr. Bishop's deodorising agent to it, Mr. Ald. Carter said the great question with the council was, "Could they increase the health, comfort, and convenience of the borough?" but in Mr. Pollard's neighbourhood there were some splendid crops on land to which manure had been applied after passing through Dr. Bishop's deodorising process.

Councillor Price could not support the motion, feeling that no portion of the drainage district should be given to a company for private advantage. He was willing that the deodorising plan should be tried, but other individuals had schemes, good and efficacious; and he did not see why Dr. Bishop's alone should be singled out without the ratepayers having the advantage of considering the others. There were parties who would take the sewage of the town for a much less sum than its removal cost last year; and they were parties who had had more experience than Dr. Bishop.

Alderman Luccock said no offer had been received from other parties. Dr. Bishop must be satisfied his plan would give satisfaction. Moreover, if the company made any nuisance in carrying they would be liable to be punished for the offence.

Councillor Lobley remarked that the rate of mortality had increased in all large towns.

Councillor Harding pointed out the necessity for carrying off or neutralising the gases from drain openings. Until that was done no plan would leave the health of the town uncontaminated.

Councillor Stead thought Dr. Bishop's plan would not meet the necessities of the case. The latest feature of his plan was the adoption of the Eureka system, and the deputation who had been at the Eureka works at Hyde, had been thoroughly disgusted and annoyed with the large accumulation of fœtid matter and offensive liquid stored there. The council had had no opportunity of knowing what would be the state of things at Dr. Bishop's manufactory when the whole refuse of Leeds was taken there. Still he (Mr. Stead) felt so much interested in this matter that he would agree to Dr. Bishop's plan being tried. The ashpit was the place whence the greatest amount of disease sprang; for, there emanated from it, gases unperceivable which were most destructive of human life. But it had been proved to demonstration that there was great value in the material collected from ashpits, and therefore he would not generally depute to any company the power to dispose of it. The right to deal with anything in which the public health was concerned should not be delegated to parties whose object was a money speculation. Ultimately he was sure the council would have to take upon themselves the entire responsibility which belonged to them in this matter, and which no other body of men had a right to interfere with.

Alderman Carter, in reply, said Dr. Bishop's company would spend 7,000*l.*, and were prepared to have laid out 35,000*l.* if the council would have granted them the whole Leeds drainage district.

The motion was then carried, there being five dissentients.

The proceedings, it will have been observed, give little intimation of the nature of the process.

ST. ANDREW'S HALL, NORWICH.

GREAT preparations are making, in Norwich, for the Musical Festival which is to commence on the 14th instant, and at which the Prince and Princess of Wales are expected to be present. St. Andrew's Hall, a noble old building of the "Perpendicular" period, and ecclesiastical in its arrangement of a clerestory and buttressed aisles, has undergone some important works of reparation and modification, including the stripping the roof, and re-covering it with new lead. The east wall of the nave has been removed, and a stone arch, nearly the entire breadth of the nave, has been inserted, by which increased space has been added to the hall. Within this additional area the organ and orchestra are placed, accommodation for nearly three hundred extra sittings being obtained by the arrangement. A new western window has been erected, and is thrown open to the hall, while the western wall has been almost rebuilt and refaced. The whole of the aisle windows on the north, south, and east have been

restored and reglazed, and the walls repaired and faced with flint-work; while, finally, a new south porch—which has been the subject of much controversy—will serve as the principal entrance.

Several committee and retiring rooms have been erected on the north side of the hall, and the whole of the internal stonework has been scraped and restored. The internal decoration of the roof is described as having an excellent effect. The panels are covered with deep blue, filled in with gold stars. The hollow moulded parts of the timbers are coloured with vermilion, those forming the arched ribs of the roof and those surrounding the clerestory windows being ornamented with gilt flowers, at stated distances, and the lower members of the arch-ribs being coloured alternately drab and oak colour. The decoration of the aisles includes the blue panels and gold stars, together with the vermilion in the hollows of the mouldings, the remainder being oak colour. The lighting of the hall is effected by nine brass coronæ, the nave having three, and the two aisles three each of smaller diameter; these, when lighted, bring out the decoration of the roof to great advantage.

Mr. T. D. Barry, city surveyor, acted as architect of the restoration works.

The portraits of Norwich worthies and citizens which adorned the dirty walls of the unrenovated hall have been removed; but it has been suggested to the mayor that some of them should be replaced, so as to prevent the building from acquiring anything like a naked appearance in any part. Many families still existing in Norwich have representatives in the portraits.

ST. MARY'S CATHEDRAL, TUAM.

A STONE to commemorate the commencement of the restoration, or re-building, of the Cathedral of St. Mary, Tuam, was laid by Lord Plunket, Bishop of Tuam, on Thursday in last week, in presence of a large assemblage. The work had become a matter of necessity. The church population of Tuam within the last ten years has increased: the town has become the terminus of a new line of railway; and its circumstances have otherwise changed. The only parish accommodation is afforded by the existing cathedral, and that is quite insufficient.

So early as the sixth century, the Abbey of Tuam was converted into a cathedral by St. Jarlath. The cathedral was destroyed by fire in 1152. It was rebuilt under the patronage of Turlogh O'Connor, King of Ireland, by Edan O'Hoisin, who was the first archbishop of the see. The successors of Bishop O'Hoisin added a new choir, and converted the former church into a nave. The only part of the present cathedral which is of any architectural interest is a porch and doorway. This remnant of antiquity has been long an object of great interest to architects and antiquaries. Dr. Petrie, in his work on the Round Towers of Ireland, states that it is "perhaps the most magnificent specimen of its kind remaining in Ireland." It appears, by an inscription upon an ancient Irish cross, that this porch and doorway once formed the chancel and chancel-arch of a church built A.D. 1130, and which is believed to have been the structure that was burned in 1152. It now constitutes the entrance to the present cathedral. A great object of the restorers has been to preserve this porch and doorway, and to have a new structure erected in harmony with them. The task of restoration has been committed to the architects, Sir Thomas Deane & Son, who are also engaged in the restoration of the Cathedral of St. Canice, in Kilkenny. The estimated cost of their design for Tuam Cathedral is about 10,000*l*.

The arch, according to Dr. Petrie, is the remnant of a church erected at a period when Ireland was generally supposed to have been ignorant of the finer arts of civilization, known to and practised by its neighbouring nations. This church, a structure of the early part of the 12th century, was beyond doubt erected by Turlogh O'Connor, the last but one of the native monarchs of Ireland—a vigorous and able prince, who was distinguished eminently for his munificent patronage of the fine arts, as shown by the beautiful processional cross of Tuam, now preserved in the museum of the Royal Irish Academy, as well as by the great stone cross of Tuam, and this remaining fragment of its beautiful church. This fragment, though it exhibits in a general way the characteristics of the Romanesque or Anglo-Norman style, is in its ornamentation essentially native, or that designated by antiquaries by the term *Opus Hibernicum*, no other architectural specimen of that style of ornamentation being known to Dr. Petrie as remaining in Ireland.

The arch forming the external door to the present building, was a departure from the plan of the church to which it originally belonged; and the fault will be corrected in the new cathedral, by placing the arch—as it once stood—between the extremity of the choir and the chancel. Consequently, the new building will stand, not on the foundation of the present, but of the ancient cathedral. The design for the new edifice partakes of the character of St. Patrick's Cathedral, Dublin, and St. Canice's, in Kilkenny. The walls and the tower will present the Irish characteristic of crennelated battlements. The clerestory windows of the nave will be of the circular cusped type. At each side of the nave, will extend, aisles supported externally by buttresses, and lighted by pointed windows in the early style. The western entrance, at the extremity of the nave, will be a broad pointed archway. Immediately over it will extend a double arcade of pointed windows, and above these the principal window of the nave, consisting of a group of seven pointed windows. The choir, which will be without aisles, will be lighted by ordinary pointed windows. Each transept will be lighted with circular windows, and large five-light windows at the extremities. The tower will be a plain quadrangle flanked by four small towers, and all surrounded by crenellated battlements, and above it will rise a stone spire. The material to be used in the external structure is limestone. The interior of the church will be lined with a remarkably fine description of red sandstone, from Nefin, in the county Mayo, supposed to be the same stone that was used in the construction of the ancient arch. On each side of the nave, within, will extend a row of four columns, each consisting of a central column of limestone, encircled by four smaller columns, composed of green Galway marble. The roof, within, will be open timbered.

Mr. W. Crowe is the builder.

Professor Donaldson was present at the ceremony, as well as the architect of the Ecclesiastical Commissioners, Mr. Welland.

THE WELLAND BRIDGE, STAMFORD.

THE Welland Bridge, which has just been erected over the river Welland, at Stamford, for the convenience especially of persons going to or coming from the Great Northern Railway Station, consists of one arch of 80-feet span, and rising 8 feet from the springing line, which is somewhat above that of high-water. The arched ribs are of I section, 12 inches by 5 inches: the top and bottom members consist each of two 2½-inch angle-irons and a 5-inch plate, riveted together, and forming Ts, which are connected together every 18 inches by double straps, alternately of flat and T iron, with flat packing pieces. Each end of the straps is bent out and riveted to the outer edge of the top and bottom members.

The longitudinal girders are composed of four angle-irons with T iron straps every 18 inches, and covered in on the outside with plates ⅜-inch thick, pierced.

Each spandril is filled in with a double row of rings composed of angle-iron placed back to back, and riveted at the top to the girders, and at the bottom to the arched ribs, and also at the various meetings and intersections. The cross girders are of 2½-inch T iron, with a plate welded on at the ends for the purpose of connecting them to the longitudinal girders, and they are placed 3 feet apart. The roadway, which is 6 feet wide, is carried on Mallet's buckled plates, overlaid with asphalte. Braces occur every 9 feet, and are composed of two lengths of T iron and two flat bars, the former crossing from arch to arch, and the latter from arch up to longitudinal girders: in each case they are placed diagonally, and riveted at the various intersections.

The parapets are of cast-iron, in 6-feet lengths, bolted together, and secured to the top of the longitudinal girders by two bolts at the foot of every upright, which are 18 inches apart. 2½-inch wrought handrails run along the top of the castings, to which they are riveted at the crown of each semicircle. The parapet is supported against outward thrust by three stays on each side, composed of angle-iron.

The abutments are carried up solid to the underside of the steps, and are built of coursed rubble, with Little-Casterton quoins and dressings, and solid York springers for the arched ribs. The wing-walls have each an arched opening filled in with a light casting, and at each end is a flight of seven York steps, 8 feet long.

The coffer-dams were constructed of single 3-inch piling, with shot edges, and two rows of whole-timber framing, with half-timber struts between them. This was found to answer very well, though one dam was 20 feet square, and in 10 feet of water.

The bridge has been erected by public subscription, from the design and under the superintendence of Mr. Wright, C.E., Stamford, whose drawings were selected out of seventeen competing designs; the Marquis of Exeter, who is a large subscriber to the undertaking, both of money and land, giving the preference to those sent in by Mr. Wright. The stonework has been carried into execution by Messrs. Roberts, of Stamford, and the ironwork by Messrs. J. & J. Cliff, of Bradford. The total cost from first to last, including extras, will scarcely amount to 400*l*.

The plans were originally prepared for a bridge 90-feet span; but, after the tenders were sent in, the committee reduced the span to 80 feet, in order to leave more room at one end of the bridge. This reduction in length increased rather than lessened the cost of the bridge, by bringing one abutment into much deeper water.

THE SERAGLIO, CONSTANTINOPLE.

THE destruction of the old Seraglio, Constantinople, was mentioned in our last. The collection of buildings had three principal gates, and five smaller, the latter being on the sea-side. The principal gates were Bab-i-Houmayoun (the imperial gate), Bab-i-Selam (gate of safety), and Bab-i-Saladet (gate of felicity). The first of these three, which is quite plain, was built in 1473, and it has not been injured. It stands on the spot, facing Constantinople, where the Forum Augusteon was. Left of this gate is the mosque of Aya Sofia (St. Sophia); and in the middle of the square on which it opens, is a fountain which Achmet III. caused to be erected, bearing verses composed by him. The large courtyard is entered through this gate. There are the Mint (Zarab Hané), and the church of St. Irene, built by Constantine the Great. The church is now an arsenal, and contains the armour of many of the Sultans. Further off was the building reserved for the chief of the white eunuchs, and the Kasne, or Treasury.

The labourers now employed in clearing the rubbish have, it is said, discovered a great number of precious stones, besides ingots of gold, silver, and other metals. The sacred standard, and other relics of the Prophet, were spared by the fire, together with the throne of massive silver which is used by the Sultans at their accession. This throne, in the shape of a canopy, rests on four pillars studded with pearls and precious stones, whence are suspended globes of gold, with the *tougs*, or military insignia, formed of the tails of horses. The throne was placed at the angle opposite the entrance. The lighting of this hall was managed with much art. The light came in through stained-glass windows, shedding a mysterious brightness, of which the effect was to strike with respect those admitted to contemplate the majesty of the Sovereigns. The Crown jewels, and the collection of paintings representing the Monarchs of Europe, and among them the Doges of Venice, have likewise been saved.

RAILWAY MATTERS.

FOR underground railways through populous districts, locomotives without furnaces have been suggested. Such locomotives would simply have a "hot-water reservoir," the water in which would be heated, before the locomotive started on its journey, by means of steam pipes from stationary boilers. A writer in the *Engineer* suggests that each such "hot-water reservoir" should be 16 feet long and 4 feet in diameter. A reservoir of these dimensions would contain 200 cubic feet, or 5½ tons of water; and if this were heated to a temperature of 400 degrees, by steam from stationary boilers working at a pressure of 235 lb., or so, it would afford steam enough, it is believed, to enable the locomotive to put forth 100-horse power for thirty minutes, which is a longer time than the "Metropolitan" trains take for the journey from Paddington to Farringdon-street, including stoppages. From locomotives worked on this plan, only steam would escape, and that not in quantity enough to be particularly unpleasant to the passengers. At the worst, an atmosphere with which moderate quantities of steam are mixed is *only* unpleasant, to those who breathe it: it does them no special harm; but the respiration of air mixed with carbonic acid

and other waste gases from furnaces, in the proportion in which those gases must exist in the atmosphere of underground railways worked by ordinary locomotives, is not only unpleasant, but very injurious also. Locomotives having no furnaces would, of course, require no "tenders" Of the injury which railways receive from the traffic which passes over them, a very much larger proportion is due to the heavy engines and tenders than to the carriages in which the passengers and merchandise are conveyed; while no small part of the force which the engines exert is expended on themselves and their attendant tenders. If some means could be devised which should render it no longer necessary for the engines supplying the motive force to travel with the trains they propel, both "working expenses" and "wear and tear of permanent way" would be greatly lessened. Many engineers are of opinion that the object in question would be best accomplished onthe principle of the "Pneumatic Despatch."

A proposed railway through the town of Sheffield is to commence on the north side of the Sheffield and Rotherham line, near Brightside; and, crossing under the Barnsley-road above the Wicker Congregational Church, it will tunnel through the hill, and emerge near the Bridgehouses Station on the Manchester and Sheffield line. Effecting a junction with that line and with the Victoria Station, it will cross on arches to Townhead-street, where the principal station is to be made, and where a tunnel commences running some distance under the town, and emerges on the south side. It will then proceed to Abbey Dale, running up the valley on the Ecclesall side. At several points it is proposed to erect stations for the development of local passenger traffic.

A plan of communication between the guard and the driver of an engine has, we learn, been adopted on the Great Eastern Railway by means of the old suggestion of a cord to the tender of the engine which rings an alarm-bell.

The new station of the Bristol and Exeter Railway Company at Exeter is being rapidly completed, at a cost, it is estimated, including the removal of the old St. David's station and the making or additional roads, of about 30,000*l.* The new building is a large structure of the Doric order. The side walls are up, the roof partly covered in, and the offices are being fitted up. The station is 360 feet in length by 136 feet outside width, while the platforms have a run of 500 feet. There are two large and two small platforms, and seven lines of rails, broad and narrow gauge. All the offices (including those of the Telegraph Company) waiting-rooms, &c., are on the platform nearest the road. The height of the square portion of the building is 39 feet, and the trussed roof rises 22 feet more. The building is of Westleigh stone, with dressings and ornamental work of Bath stone. In the construction of the roof about 300 tons of iron and 30 tons of glass will be used. These quantities include low roofs in front of the station for the accommodation of cabs, &c. The approaches will be much more convenient than heretofore. The mason's work, glazing of the windows, carpentering and decoration, have been contracted for by Mr. G. Spiller, of Taunton. Mr. Kerslake, of Exeter, is erecting the roof, and putting up the rest of the iron work, with the exception of the foot-bridge leading to and from the various platforms: this is the work of Messrs. Hennet, Spink, & Else, of Bridgwater. On each of the two main platforms is a hydraulic lift for raising goods to the level of the foot-bridge for the purpose of their being conveyed from the up to the down side, or *vice versâ:* these have been put up by Messrs. Easton & Amos, of London. The whole of the work is being done under the direction of Mr. F. Fox, engineer of the Bristol and Exeter Company, Mr. Simmons being the resident inspector. It is expected that the station will be sufficiently advanced for use soon after next Christmas; but the decorations are not expected to be completed until about three months later.

The traffic receipts of railways in the United Kingdom amounted for the week ending 8th of August, on 10,882 miles, to 669,640*l.*; and for the corresponding week of last year, on 10,428 miles, to 645,010*l.*; showing an increase of 454 miles, and of 24,630*l.* in the receipts. The receipts for week ending 15th August, on 10,882 miles, amounted to 652,655*l.*, and for the corresponding week of last year, on 10,428 miles, to 637,950*l.*, showing an increase of 454 miles, and of 14,705*l.* in the receipts.

The *Italie* of Turin states that conferences were lately held at Lucerne for the purpose of discussing the expediency of piercing a tunnel through Mount Gothard. Delegates from thirteen cantons and three half-cantons attended, the population represented by them amounting to about 2 000,000. The two companies of the Swiss Central and North-Eastern lines were also represented. M. Zing, of Lucerne, read a report drawn up by M. Welti, civil engineer, on the whole line from Fluelen to Lugano. According to one of the two projects presented, the tunnel is to be pierced at an altitude of 1,200 mètres above the level of the sea, and at 100 mètres above that of Airolo (Tessin), and Goeschenen (Uri). Its length is 153 kilomètres, and it may be pierced by the aid of two shafts, one 166 mètres and the other 296 mètres in depth. According to the second project, the tunnel, to be pierced at an altitude of 1,500 mètres above the level of the sea, which is that of the celebrated hospice, will only be 98 kilomètres in length; but, as a set-off, the rest of the line passes through the most unfavourable ground possible. A more detailed report on this important question is in course of preparation.

At the date of the last returns on the subject, the locomotive department of the East-Indian Railway employed 536 Europeans (and East-Indians), and 4,300 natives; that of the Eastern Bengal Railway, 21 Europeans and 33 natives; that of the Calcutta and South-Eastern Railway, 8 Europeans and 23 natives; that of the Madras Railway, 341 Europeans and 2,278 natives; that of the Great Southern of India Railway, 22 Europeans and 54 natives; that of the Great Indian Peninsula Railway, 152 Europeans and 2,055 natives; that of the Bombay, Baroda, and Central India Railway, 52 Europeans and 227 natives; and that of the Scinde Railway, 27 Europeans and 2,881 natives; making a total of 1,159 Europeans and 11,851 natives. The natives show a great aptitude for railway work, and many of them are good mechanics.

A ukase has just been signed by the Emperor of Russia for the construction of a railway from Moscow to Sebastopol. The line is to be 953 miles in length. The nominal capital will be 22,500,000*l.*, and the period allowed for the completion of the work is six years from the date of the commencement. Sebastopol is to be made a free port.

GAS.

At the 28th half-yearly meeting of the Bury St. Edmund's Company, the report of the directors stated that the profits of the past half-year were sufficient not only to pay 10 per cent. on the old capital, and 7½ per cent. on the new, but also to make a payment of 2s. per share in part liquidation of arrears due on the old capital, and 6d. per share in full discharge of arrears on the new capital. After doing this a balance of profits amounting to 43*l.* 16s. 8d. remained to the credit of the next account. The report was adopted.

The shareholders of the Eastbourne Gas Company have held their annual meeting. The report of the directors recommended that a dividend of 10*l.* per cent. should be declared; also that there should be an increase in the capital to enable them to lay down new mains where required; and to substitute larger mains in the principal thoroughfares. The report was adopted, and it was unanimously resolved that 2,000*l.* should be raised by means of shares.

The Newport Gas Company have just held their half-yearly meeting. The directors report that there had been an increase in the consumption of gas during the half-year as compared with the corresponding half-year of 1862, and the gas rental would have also shown an increase, but for the operation of the reduced price made at the end of June, 1862. The loss occasioned by that reduction, however, had been partly made up by the greater consumption referred to, and by the effect of a readier sale of coke and tar through the past half-year, by which loss had been prevented. The report was unanimously adopted, and a dividend at the rate of 10 per cent. per annum was declared on the class A shares, and 7½ per cent. per annum on the class B shares.

The Debenham Gas Company have held their annual meeting. The directors of this company charge the impracticable price of 8s. 4d. per 1,000 feet for their gas, and the very natural consequence is that, though the company has been five years in existence, no dividend whatever has been received by the shareholders up to the present time; and, what is more, the want of dividends is given as a reason why the price cannot be reduced; so that this "vicious circle" must be an eternal one, unless the shareholders can open the eyes of their directors to the true interests both of the local public and of themselves, to be realised only by a large and liberal reduction of price.

Messrs. Hanna, Donald, & Wilson, gas engineers and contractors, Paisley, have just completed, at Leominster, a new gasholder and cast-iron tank. The gasholder is 61 feet diameter by 20 feet deep, and the whole has been erected and completed in two months.

The Cardiff Gaslight and Coke Company have held their 53rd half-yearly meeting, and have farther reduced the price of their gas (3d. per 1,000 cubic feet), and declared their usual dividend. The price is now 3s. 3d. to small consumers. "This," remarks the *Cardiff Times*, "is another proof of the vast good effected by the opposition Company."

The half-yearly meeting of the Liverpool United Gaslight Company has been held. The report, which was adopted, recommended that the dividend for the half-year ending 30th June last be 5*l.* per cent. on the consolidated stock of the company. After providing for this dividend, there would remain a disposable net surplus of 8,271*l.* 2s. 6d.; the amount required by the company's Act of Parliament to be placed to the credit of the reserve fund having been already fully provided for. The directors recommended a further reduction in the price of gas, to take effect from the 1st of July last, at the following rates; namely, to all consumers within the borough of Liverpool 2d. per 1,000 cubic feet, and to all consumers in the out townships 3d. per 1,000 cubic feet; making the actual charge for gas in the borough 3s. 5d., and in the out-townships 3s. 9d., per 1,000 cubic feet. They also recommended a rateable reduction in the meter-rents.

"We now obtain such extraordinary results by a new method of using the kerosene tar in the Aubin Gasworks," says an Albany correspondent of the *American Gaslight Journal*, "that I must inform you of it. We cut maple or other hard wood into small pieces, dry them, and then saturate them with the tar,—using one gallon to 55 lb. of wood. From this we obtain 400 feet of rich gas, and the charcoal left is clean and of the best kind, and is actually worth more than the wood used. Other advantages of this process are, that it requires less fuel, although it makes gas much faster than our old methods; and, with a slight modification, enables us to use advantageously the cheap, thick, and lumpy tar hitherto of no value except for fuel. As hard wood can be had, and its charcoal is saleable everywhere, the above simple method of using the Aubin Gasworks adapts them toe very locality; and, in connexion with the small cost of operating them, and the great simplicity of construction to which many years of experience have led, should introduce them wherever gasworks are needed. In proof of this practical value, I add that village gaslight companies, selling only 300,000 feet of gas, are successfully using them."

LIGHTHOUSE CONSTRUCTION.

THE lantern for the Lighthouse of Arranmore, off the coast of Donegal, has been constructed by a Dublin firm,—Messrs. Edmundson & Co., of Capel-street. It is a huge sixteen-sided structure, covered with a copper dome, and surmounted by a ball, supplied with ventilators, and bearing a wind-vane representing an arrow. The height of the structure, from its base to the ball, is 30 feet, and its diameter is 15 feet. At first sight, remarks the Dublin *News Letter* in describing it, one would be inclined to believe that it was a large portable house. This lantern will stand on a solid mason-work tower of 55 feet high, which will make the elevation of the light nearly 85 feet. The floor of the lantern is composed of pieces of metal, weighing 16 tons, and all jointed together with the greatest precision. From this flooring rises a metal wall, presenting sixteen sides. From this wall the lantern springs, which is composed of forty-eight compartments, divided by bars of gun-metal, grooved to receive plate-glass three-eighths of an inch in thickness. The uprights sustaining the dome are of planed iron, jointed with gun-metal astragals. The lantern is entered by means of an air-tight door, which will open on the platform of the tower, into which the lantern will be built and bolted down. The metal walls are lined with polished mahogany, in which ventilators are inserted. A curved metal stairway leads to an open ironwork gallery surrounding the apartment at half its height. This gallery will be used for serving and tending the light, which will be a revolving one, and of the first order. Inside the dome, a circle of iron is introduced, from which the T-iron that will support the apparatus for sustaining the light will spring.

This T-iron will rest on the wrought-iron cornice-plates at the spring of the dome. Here will also be fixed the machinery and fixtures for the revolving gear, to which will be affixed a weight, which runs through a hollow metal column, having its base at the foundation of the tower. The weight is to be wound up on the principle of a clock. The whole work has been carried out under the immediate supervision of Mr. Wigham. It is the first of the kind ever manufactured in Ireland.

BUILDING NEWS FROM IRELAND.

Dublin.—A "neutral place of worship," as it has been called, under the name of Merrion Hall, has been opened with solemn service in the presence of a very large congregation, including many clergymen of all denominations, and most of the *élite* of Dublin. It has been erected, by public subscription, at a cost of 16,000*l.*, and is intended for the celebration of divine worship without any of the distinctive characteristics of the different sects; thus affording a neutral ground on which Christians of all denominations may unite in public devotion. The building, which is situate at the corner of Lower Merrion-street and Harcourt-place, is constructed of white Suffolk brick, with an ornamental front of Caen and Portland stone. It covers an area of 6,800 superficial feet, and will accommodote 5,000 persons. The principal front faces Lower Merrion-street, and is in the Italian style, three stories in height, the measurement from foot to top of balustrade being 63 feet. The façade may be said to have three divisions. The centre, or principal feature of the building, projects from the side wings, containing double staircases leading to the galleries. The lower part of the central projection is a piazza, having large arched openings separated by ornamental stone piers. The piazza is 46 feet in length and 9 feet in width, and leads into three internal porches in the body of the hall. The piers also support an entablature of frieze and ornamented cornice separating the two lower stories. The upper part of the centre is composed of Corinthian columns and pilasters, supporting the main entablature, and projecting pediment. Both the upper and lower entablatures are continued along side wings on their fronts and flanks, and the angles have moulded and fluted quoins below, and pilasters above, corresponding with those in the central projection. In the lower story of the staircase the wings are large, the doors with stone pilasters and heavy projecting carved hoods; and the top story has large windows, with stone pilasters and pediments. The sides of the building facing Harcourt-place and Merrion-square were originally designed to be in character with the front, but have been carried out in a more simple manner, in order to reduce the expenditure. On the side next Harcourt-place, between the two projecting staircase-towers, is a large area, which leads to extensive schools in the basement story. The walls of both sides and rear are pierced with four tiers of windows, which light the body of the hall, galleries, and schools beneath. The materials used in constructing the front and ends are Portland and Caen stone, and for the cornices, mouldings, columns, and other dressings; the intermediate spaces being faced with white Suffolk bricks, the first, probably, that have been introduced into this city. On entering from the street level into the body of the hall, three galleries can be seen, one over the other, continued all round the building, and forming the centre part of the hall into an elliptical shape. The loftiness of the building allows space between each of the galleries, without interfering with the light from the side windows. The galleries are supported on ornamented cast-iron columns, continued up from the basement story to the roof, which they also assist in supporting. The fronts of the galleries are formed into enriched cornices, supporting iron ornamental open-pattern balustrades. The platform for the choir, and the pulpit platform, are placed in front of the galleries at the rear of the building, standing well out towards the centre, so that the speaker can be well heard and seen from all parts of the building. The choir floor is at a level half-way between the body or ground-floor of the hall and the first gallery, being sufficiently high to allow the space under it to be occupied on crowded occasions. It is supported on light columns, as is also the pulpit, which is over the lower platform, its floor being on the same level as the front of the lower gallery. Both platforms have semicircular fronts, and are inclosed round with ornamental metal railings. The floor of the body of the hall is sloped down towards the platform, and the seats are arranged in amphitheatre style, so as to face the speaker all round. The building throughout is fitted with pew sittings of stained wood. The means of ingress and egress have been attended to by the architect. There are in all ten entrance and exit doors, specially arranged for the convenience of the body of the hall and the galleries, so that the building is capable of being cleared in a few minutes. The three galleries are approached by six different staircases placed at the angles of the building. The front and side wings each contain two separate double staircases, one in each being for the lower gallery alone, and the others for the two upper galleries. From their position in the angles of the hall all crowding will be prevented. The ceiling of the hall is deeply coned, and springs from ornamental foliated capitals of the iron columns, supporting galleries at present unfinished, from which points enriched bands or ribs run up on the cone, and on the underside of the arches between the columns which form a groin at their junction with the arch of the ceiling. Over the centre of the hall in the ceiling there is formed a large compartment for ventilation. It is enclosed externally with sashes appearing above the roof. Under these sashes are fixed other sashes of ornamental forms, glazed with amber-colour stained glass, which always presents the appearance of the sun shining into the building. These sashes are covered over with perforated zinc for protection. The sashes in the sides of the ventilating compartment in the roof are open for summer ventilation, as also all the window-sashes in the side and rear walls. A means is also adopted at each of the windows for admitting air without the sashes being opened. The undersides of the galleries, instead of being ceiled flat, in the usual manner, are formed into arched cones between the columns and bearers. The building is still in an unfinished state. Round the entire range of galleries are a series of gas pendants, so arranged as to carry away the heat and products of combustion with horizontal rows of pipes traversing the entire length and breadth of the building. These pipes become intensely heated after the gas has been lighted, and, consequently, radiate heat. They continue up the side angles of the building, and are connected to the funnels of the two large sun-lights, which are fixed in the centre of the dome. When the sun-burners are lighted a draft is produced through all the tubes, thereby carrying off all the obnoxious vapours arising from the gas-burners. In the view from the galleries no gas-jets are seen, but a halo of light universally diffused throughout the entire space, which shows with precision the architectural features of the edifice. The idea of this combined principle of lighting, warming, and ventilating is attributed by *Saunders's News Letter* to Mr. H. Bewley, who instructed Messrs. Edmundson & Co., of this city, to carry his idea into practice. There will be accommodation for 3,500 persons, without any pressure; and, standing-room included, the building is capable of containing 5,000 persons. The net cost of the edifice will be about 13,000*l.* The architect of the building is Mr. Alfred G. Jones, of Dublin, who was also the architect of the Dublin Exhibition Palace and Winter Garden Buildings. The contractors are Messrs. Cockburn, of Dublin. The ironwork is done by Mr. Strong, of Dublin.

Kilkenny.—The Cathedral of St. Canice, Kilkenny, having latterly fallen into great disrepair, its restoration was resolved on by the Dean and Chapter of the cathedral within the last year. The task of carrying out the work, which is to be one of strict restoration, has been placed in the hands of Sir Thomas Deane & Son. An examination of the architecture of the building has led to the discovery of interesting arches which had been blocked up; and these, together with the clerestory windows, and all other points in the ancient edifice, will be carefully preserved and renewed. The cost of the restoration is estimated at from 8,000*l.* to 10,000*l.*

Headford.—The plans for the new Roman Catholic Church at Headford, recently noticed in the *Builder*, were prepared by Mr. R. Pierce, of Wexford, and the works are under the superintendence of the Rev. Mr. Conway, P.P. The new building consists of a nave, north and south transepts, chancel, apse, sacristy, and side porches, designed and arranged in the Gothic style. The church will be 90 feet long by 30 feet wide, and measure 60 feet across the transepts, which are entered from the nave through two lofty arches on either side, standing on a pillar in the centre, and abutting on the wall. The church is designed without aisles, and the effect appears to be to bring the congregation near the sanctuary, and within easier reach of the exhortationist. The high altar is placed in the apse, and side chapels will be formed by open-traceried wood screens. The apse will be lighted by a window of four lights with traceried head, to be filled with stained glass, and also by side lights placed high up towards the roof, which will be boarded and panelled for staining and decoration. The side altars are lighted by triplet windows, the transepts by tall lanced lights, and the nave by couplets of considerable height. In the western gable, over the main doorway, will be a traceried window of three lights. The porch will be lighted by small quatrefoil lights, in the seats of which will be fixed holy-water fonts; and the sacristy will be lighted by a tri-light. In a screened-off space at the west end of the church will be placed the baptismal font and stairway to organ-gallery. There will be a piscina for each altar, and the structure will comprise every requisite for a parish church. Ventilation and drainage will be also attended to. The flooring of the sanctuary, &c., will be of boards: the remainder of the church will be tiled. The roof will be open and high-pitched, of intricate construction, standing 32 feet from the floor of the apex; the height of the side walls being 20 feet. The western gable fronts the town, with its doorway recessed and flanked by two buttresses, in which are two other holy-water fonts, and traceried tri-light windows, topped by a belfry, rising to a height of about 75 feet, standing on walls of 4 feet 6 inches thick, and surmounted by a cross. All the other gables will be terminated by floriated stone crosses.

Ennis.—The contract for the erection of the new lunatic asylum for the county of Clare has been declared by the Board of Control in favour of Mr. Michael Meade, of Dublin, builder, at a sum of about 29,000*l.* The site is within a mile of Ennis, on the Gort-road, and consists of about forty acres of land, which have been enclosed by a boundary wall. The architects are Messrs. John Fogarty & Son, of Limerick, in conjunction with Mr. Adair, county surveyor of Clare. The design comprehends a centre building and two wings, extending to a total length of about 600 feet, and, with the yards immediately adjoining, covering a space of about five statute acres. The style is Italian. The walls and dressings are to be executed in the light-coloured limestone of the district. The centre building will contain the board-room, office, chapel, and residences for the physician and matron, and is to be surmounted by a campanile or clock tower, 85 feet in height. One wing will contain the male, and the other the female patients' apartments, the day-rooms occupying the ground-floor, and the sleeping-rooms the upper floor. Two other towers, each 65 feet high, will stand, one at the end of each wing, containing ventilating shafts. The kitchen, laundry, and their several adjoining buildings, are to be at the rear, and there is to be a hall in a central position, in which the whole of the patients, of both sexes, may dine together, and in which they may be occasionally assembled together for lectures, music, and other recreations. The airing and working yards are to be of ample dimensions, planted and laid out as gardens. The rooms will be lofty, with large cheerful windows, projecting in some instances so as to afford views of the surrounding country. Warming, ventilation, and drainage have been provided for. It is expected that the works will be commenced immediately.

Galway.—The Roman Catholic Chapel of the Galway Union has been completed. Immediately after the resolution adopted by the Committee of the House of Commons on the Poor-laws, recommending the establishment of separate religious places of worship in the Irish workhouses, was published, the Poor-law Commissioners issued a circular to the various Boards of Guardians, calling their attention to the subject, and permitting the expenditure of funds from the rates for that purpose. The Relief Extension Act of 1847 had made it lawful for the Poor-law Commissioners to direct that suitable places of worship should be provided in Irish workhouses; but whether from ambiguity in the wording of the Act, or from not understanding its spirit and tenor, there was no attempt to provide separate chapels until after the deliberations of the Parliamentary committee which sat last year. The Guardians of the Galway Union were the first Board in Ireland to give effect to the circular of the Poor-law Commissioners. Owing to the decrease in the number of inmates in the workhouse, the guardians were able to make a portion of the dining-hall available for the chapel. Accordingly a space of 51 feet 6 inches by 30 feet was set apart and walled off for the purpose. Upon the principal altar there is a gilt tabernacle. There are two side altars, one dedicated to the Virgin, and the other to St.

Joseph, each surmounted by its appropriate image. There are two confessionals, one at each extremity of the sanctuary. The railing and woodwork of the altars and confessionals are oak-stained, and the fronting of the altars, and roofs of the confessionals, are ornamented in the Gothic style. The roof is open, the beams being sheeted and oak-stained. The walls are plastered in imitation of Ashlar masonry. The door is a Gothic archway. The windows are also arched Gothic. The floor is boarded and furnished with seats, an open space being left up the centre, the entire length of the chapel, so as to separate the males from the females.

BUILDING NEWS FROM SCOTLAND.

Glasgow. — Instructions have been received from the Hon. Mr. Cowper, the First Commissioner of Works, to remove the two stained-glass windows put into the sacristy of the cathedral. These windows were erected in memory of George Holmes Burnes, who met his death at Lucknow, and of his uncles, Sir Alexander and Charles Burnes, who fell at Cabool. The one window represents David mourning over Jonathan, and the other our Saviour with a child in his arms. The white glass in front of the windows is to be preserved, and painted a dark brown colour.

Greenock.—The contractors for the new stalk now being built at the Greenock Distillery employed a lad of about 16 to receive the buckets of mortar hoisted up, and he was in the act of stretching out to draw in one, when his foot slipped, and he fell down inside the stalk, a distance, it is said, of about seventy feet, in the course of his descent coming into violent contact with several of the spars which are stretched across. He died instantaneously.

Dumfries.—The contractors for the mason work of the New Court-House buildings, Messrs. J. Crackston & Son, Maxwelltown, are commencing their operations, and it is expected that the building will be considerably advanced by the close of the year. The other contractors are Messrs. J. Alexander & Son, Ayr, for the joiners' work; Messrs. Highet & Son, Ayr, plumbers' work; Mr. J. Kerr, Glasgow, for the plasterers' work. Mr. Kerr executed the plasterers' work of the U. P. Church, Buccleuch-street. Mr. S. Bell, Carron-bank, near Thornhill, is contractor for the slaters' and glaziers' work; but Mr. R. Coltart, Dumfries, will execute the glaziers' work.

Hawick.—The gas managers have commenced their contemplated improvements at the gas-works, by the erection of a new chimney stalk. Mr. Harkness is the contractor. The stalk is to be built of red brick, faced with white at the corners. The height will be 100 feet, and the shape octagonal. Other alterations to supply the greatly increased demand for gas will also be made when the chimney is finished.

St. Andrew's.—In accordance with the wish of many friends of deceased distinguished persons connected with St. Andrew's, and by permission of the Board of Works, the glass of the new windows of St. Salvator's Church, which has recently undergone extensive alterations, is to be taken out, and the place supplied with *in memoriam* windows of stained glass, after the manner of Glasgow Cathedral. The three first are to be put in immediately, the glass having arrived for the purpose. They are to be in memory of the late Dr. Thomas Chalmers, Dr. John Hunter, and Sir Hugh Lyon Playfair.

Dundee.—Great preparations are being made for the opening of the Baxter Park on the 9th inst. Arches are being got up in various places, and there is to be a procession in which the Freemasons are to join.

Inverness.—The foundation-stone of the United Presbyterian new church, now erecting in Union-street, is about to be laid. Although several liberal subscriptions have been made by friends in the town and neighbourhood in aid of the funds for the completion of the building, these will require to be supplemented by the general public of the district in order to enable the congregation to carry out the original design of adding a spire to the church.

ALBERT MEMORIALS.

Manchester.—The minutes of a recent meeting of the committee record that in consequence of the foundation being intersected by drains, the clay had to be excavated to the rock, a depth of 17 feet. This had made the adjoining brewery unsafe, and it had been shored up. The tender for the granite steps amounted to 560*l.* The 50,000 bricks presented by the Brickmakers' Association had been used, and an order had been given to Mr. Ludlow for 150,000 more, at 20s. 6d. per 1,000. Mr. Fairbairn had inspected the site and excavation, and expressed himself well pleased with both. The erection of the stonework would be deferred until the spring: 1,400*l.* more will, it seems, be required for the foundation and fixing the statue. The total amount required will be 4,000*l.*, towards which 2,900*l.* have been received and promised. A numerous canvassing committee is to be appointed.

Hastings.—We observe that the hint we threw out a few weeks ago, in relation to the figure of the late Prince, has had effect. The objectionable bead moulding has been removed from the niche.

Abingdon.—At a public meeting convened by the mayor, it has been resolved to carry out the project of a memorial of the Prince Consort. A design prepared by Mr. Gibbs, of Oxford, architect, has been adopted. The memorial will be about 40 feet high. The base will start from a series of steps, in the upper portion of which will be four medallions of the Queen, with monograms, devices, &c. Then will rise four carved columns, with carved and panelled octagonal shafts between, with a cluster of foliated capitals. A frieze-like course, formed of five octagonal shafts, in the panels of which are shown the arms of the county, borough, diocese, &c., rises next, with more carved capitals. Four lions bearing the arms of the Prince, quartered with those of the Queen, and emblazoned in heraldic colours, support the pedestal on which the figure of the Prince is represented. The cost of the memorial is estimated at 300*l.*

OXFORD: PROPOSED IMPROVEMENT IN THE "PARKS."

A PLAN for the alteration and improvement of the Oxford "Parks" has been for some time exhibited in the New Museum. According to the *Oxford University Herald*, the ground to be dealt with forms nearly a square, and comprises, in addition to the Museum and the long narrow piece of land generally called the "Parks," the several fields extending on its eastern side to the Cherwell. The broad avenue at present existing close to the front of the Museum, is to be extended northwards, terminating in a circle near the north boundary. From the middle of this avenue a meandering walk, nearly following the present path to "Parson's Pleasure," is to lead to the Cherwell, along the banks of which a walk is to be constructed. Another walk is to extend from the circle to the south of a thick belt of trees, with which the northern boundary of the estate is to be planted, and to be continued along the banks of the Cherwell and the southern side of the ground, completing the circuit at the north-eastern angle. Two acres and a half of the ground are to be excavated, so as to give the Cherwell in this part the appearance of a lake; and at the south-east angle it is suggested that the long-promised bridge over the Cherwell, leading to the Marston road, should be erected. A keeper's lodge is to be built at the south-west angle of the ground. A large portion of the entire area is to be reserved for sheep pasture; but at the back of the Museum about twenty acres are to be appropriated for cricket grounds, with a cricket-house, dining-room, dressing-room, and kitchen. The estimate for carrying out this scheme amounts to the sum of 9,475*l.*, exclusive of the Cherwell bridge and outer fence.

THE CASUAL LONDON POOR.

ALTHOUGH Lord Raynham's Bill for the better management of the casual poor of the metropolis was withdrawn, it met, upon the whole, with a favourable reception by the House of Commons; and we trust that during the next Session of Parliament the subject, being more generally understood, may be brought to a more decided and satisfactory result. The objections to Lord Raynham's measure were for the most part trifling, and founded on a want of sufficient knowledge of the merits of the case.

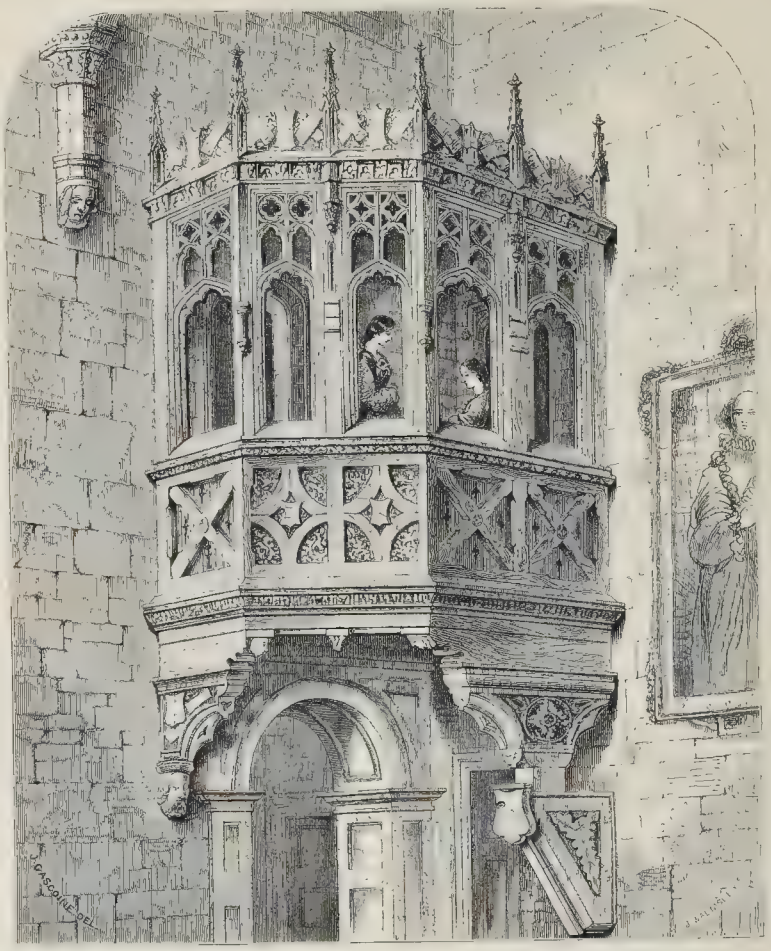
At present the reception of the casual poor is unequally managed. For instance, in the rich parish of St. George's, Hanover-square, there were, during a certain period, only 210 casual poor relieved; but in St. Pancras, in the same period, there were 11,375; and it is a well-established fact, that in those parishes, although overburdened with rates, wherein guardians are kindly disposed towards the destitute, the wards are thronged with more than the average number of those who are glad to seek a shelter for the night. Moreover, as we have shown, the accommodation provided at present, is often insufficient for the purpose of preventing the disgrace, in this great capital, of forcing destitute persons to wander during the night, and sometimes to perish in the streets. A chief provision of Lord Raynham's Bill was to establish places of shelter as supplementary to the casual wards; these to be supported jointly by the various metropolitan unions; and it was proposed to enact that "every asylum established in the general district shall be open for the admission of poor persons at all hours, both by day and night; and every person alleging himself or herself to be destitute shall be, *ipso facto*, entitled to admission, and shall be admitted into such asylum, and to food and lodging, for a period not exceeding twenty-four hours at one time."

It was argued that such a measure as this would encourage idle and vagrant persons to flock to the metropolis, and that arrangements of this kind would lead to much imposition; and it must be admitted that, to a certain extent, deception is practised for the purpose of obtaining a night's miserable lodging in the casual-ward, although far better accommodation could be had in many of the common lodging-houses for a single person for 3d.; but it is unfortunately the case that many in this large population are not only without a home, but unable by any honest process to obtain the small but needful sum of even 3d. for a night's lodging. The working of the present casual-ward system certainly needs considerable alteration and amendment. Though there are some, no doubt, who wander from one ward of the metropolis to another in a systematic manner in search of this kind of lodging; and many reared in the workhouses and unions themselves who resort to these places for temporary shelter; nevertheless, the greater number are persons in search of work, or who, having fallen out of employment, are in search of distant friends, and also those who are entirely destitute, and but for such shelters would be obliged to wander in the streets. In winter especially, the sufferings of many of these classes are very severe; and those who are really the most in need, and who have not been accustomed to a vagabond life, fare the worst. The establishment of central works, supported by the united parishes of the London district, and managed by deputies, would be of great advantage to the destitute and houseless poor. Many of the parish authorities would thus be saved a great deal of trouble, and even expense; and prevent much imposition; for, by a well-managed central system, those in the practice of imposing would soon be discovered, and might in some way be punished and prevented from continuing such practices.

Persons who have long been engaged in the relief of the London poor have expressed an opinion in favour of central places for casual relief; and it would be well if the views were collected of a number of practical and experienced men on this subject.

MORE ABOUT TENDERS.

ROADS IN THE ISLE OF MAN.



A STATEMENT of the Isle of Man Disafforesting Commission, addressed to the Lieutenant-Governor by Mr. Hans Busk, on the 28th of July last, and published in the *Manx Sun* of the 15th ult., gives some particulars of tenders for the formation of roads in the island. For the first system of roads (557 chains in length) in the southern mountains, the tenders, all from well-known contractors, exhibited the "remarkable and perhaps even unexampled discrepancy" (to use the words of the statement) which appears as following:—

The highest amounted to	£9,177
The next	6,799
The third	5,100
The fourth	3,191
The fifth and lowest, from Messrs. Eustace, of Oxfordshire, to	1,980

a sum actually less, says the statement, by 65*l.*, than the amount which an experienced surveyor had computed to be a fair remuneration for the required work.

The tender of Messrs. Eustace was accepted for these roads, and others.

The contracts now made amount to twenty-seven miles. Certain roads have been some time finished; and they are reported of favourably. Others will be completed by December next. The cost *without* culverts and earthworks will average about 4s. 12d. per yard, and "including embankments, earthworks, and extras, about 5s. per yard."

GALLERY OF COMMUNICATION IN THE HALL, COMPTON WYNNIATTS, WARWICKSHIRE.

MR. M. DIGBY WYATT, ARCHITECT.

GALLERY OF COMMUNICATION IN THE GREAT HALL, COMPTON WYNNIATTS, WARWICKSHIRE.

THE subject of our illustration is taken from an original sketch by Mr. M. Digby Wyatt, for the gallery which has lately been executed by Messrs. COX & SON, of Southampton-street, Covent-garden, and the Belvedere-road, Lambeth, for the hall of the Marquis of Northampton's house, Compton Wynniatts, Warwickshire, the ancient and well-preserved family seat of the Comptons. The main portion is of wainscot, the supports being stone corbels. The whole has been designed to afford a convenient access on the first floor from the new staircase (which has been made to supersede a very bald affair of the end of the last century), and through the hall, to the splendid old set of reception-chambers on the first floor.

SEWERAGE: OUTFALLS ON THE COAST.

BRIGHTON.

ALMOST the whole question of sewerage of towns may be said to be comprised in that of outfall. It may be that ultimately, the sewage of each town will be distributed by many outfalls, on to the land around. But whilst the question is tending to that form of adjustment, we are ejecting sewage into water-courses, or directly into the sea, with some ill effects in each of the cases.

It is important to watch the measures adopted in contending with the evil, as it is felt in many of the places that are resorted to for health. We mentioned in a recent number the proceedings of the town council of Hastings. At Brighton, opposite the Junction Parade, a new outfall is being formed, to be called "the New Albion Outfall." The object is, to carry the sewage of the centre of the town out into the sea to a distance of 1,700 feet, or one-third of a mile,—a distance sufficiently great, according to some authorities, to obviate all unpleasant or unhealthy consequences. The colossal iron pipes which are to form the sewer have been cast in Derbyshire. One "length" of 300 feet has been already joined; and, when the trench that is to receive it, and which commences below low-water mark, has been finished, this "length" will be floated to it—after being made water-tight for the purpose,—and will be embedded in the sand, or rather chalk; for, the marine substratum has been found to consist in a great measure of the latter substance, and not, as was expected, of sand. This has made the work of dredging the trench for the drain a very laborious one. Lately, by an unfortunate casualty, the work was stopped altogether, the "dredger" suffering shipwreck half-way between Brighton and Shoreham. The loss is a great hindrance to the contractors, and will delay the laying down of the pipes. There was some idea, at one time, of floating the whole of the pipes to the bed in one great length; but this, it is understood, has been abandoned as too hazardous; and the 300-feet length will be tried first. Several pipes have been already fixed nearer shore.

Besides the dredging work and the joining of the pipes, a great deal of other work has been done in the construction of a weir for a storm-water overflow, and the connexion with the sewers, which are being formed with massive brickwork, for which a solid foundation has been prepared in the chalk; and a steam-engine is daily employed in pumping out the water which comes in with every tide.

Up to the present moment the contractors are considered to have shown great energy; but it is thought that the work should have been commenced earlier in the year, considering that, in a month or two, rough weather may be expected. October is the stipulated time for the completion of the contract; but it is doubtful whether the work will be accomplished by that month.

BESTWOOD LODGE, NEAR NOTTINGHAM.

OUR principal illustration, this week, represents a mansion which is now being erected, near Nottingham, for the Duke of St. Albans, from the design and under the superintendence of Mr. S. S. Teulon; and which will receive the name of Bestwood Lodge. We must look forward to some other opportunity for supplying further particulars than the view affords.

BESTWOOD LODGE, NEAR NOTTINGHAM.—MR. S. S. TEULON, ARCHITECT.

PROVINCIAL NEWS.

Horncastle.—The contract for building the county-court offices about to be erected at Horncastle has been taken by Mr. W. Huddleston, of Lincoln. The cost will be between 2,000*l.* and 3,000*l.* Mr. Huddleston has also obtained the contract for the erection of a parsonage-house at Sherborne, in Warwickshire, his tender being about 3,000*l.*——A number of workmen have been engaged in pulling down the Rodney Inn, and the Queen's Head is to undergo a similar operation, Mr. J. B. Stanhope, M.P., the owner, being about to erect two new inns on the sites of those pulled down. In the same street as the Rodney Inn the new court-house is to be erected; and it is hoped these two improvements will be the forerunners of others.

Thetford (*Norfolk and Suffolk*).—Public improvements are also being made in Thetford. The new chapel at the Union, the first stone of which was laid in June last, is approaching its completion. It is built in a similar style to the chapels in the cemetery, and is of about the same dimensions. The Primitive Methodists' new chapel in Guildhall-street is now being fitted up; and preparations are making in King-street for a new chapel for the Baptists. The Angel, which was burnt down in the Market-place on the 10th of March last, is now being re-built on an improved scale, and will be an acquisition to the town; and there are numerous other similar improvements now going on in different localities.

Godmanchester (*Hunts*).—The tender for the enlargement of the county hospital, submitted by Messrs. M. Thackray & Son, of this town, has been accepted by the committee, and between twenty and thirty hands are now employed at the work.

Windsor.—Chariott's trustees having lately purchased the old buildings formerly known as Reeves's Almshouses, situate near the British Schools at the rear of William-street Chapel, have determined upon demolishing them, and erecting new almshouses upon the site. The building, according to the local *Express*, is to be in the Tudor style, and is to be constructed of red brick, with Bath stone dressings. At first the erection of the centre portion only is contemplated, leaving space for a wing on each side. The portion to be now built is designed to accommodate four single inmates, having one room each, on the ground floor, and two married couples, with two rooms each, on the first floor. When the tenders for building were opened, that of Mr. Snowball, of Slough, being the lowest (672*l.*), was accepted. The architects are Messrs. Edgington & Tait, of this town.

Bognor (*Sussex*).—A company is being formed here for the erection of a pier to this watering-place. Sir C. Fox is to be the consulting engineer.

Hastings.—A proposal is at present on foot to obtain the Priory Meadows, extending to about 6 acres, for a public park and recreation ground for Hastings.

Chippenham.—The new Temperance and Workmen's Hall, at Chippenham, though not quite completed, has been opened, as already noticed in the *Builder*. The hall has been erected from the designs of Mr. Stent, of Warminster, by Messrs. Smith & Light, of Chippenham.

Bath. — The new hydropathic establishment, erected at the cost of Messrs. Jupe & Son, of Mere, from the design of Mr. Stent, of Warminster, is now open, and complete; and, with the mansion, Turkish and other baths, forms a pile of buildings on the side of the hill.

Plymouth.—The theatre has been re-opened, after having undergone many alterations and a complete renovation, to repair the damage, and obliterate the evidences, of the fire which seriously injured the building last winter. By this fire the entrance at the northern façade was destroyed, together with the staircases leading to dress circles and upper boxes, the refreshment-rooms and the property-room, in the latter of which the fire was supposed to have originated. At this part of the building there has been an "escape staircase" constructed to be used in case of an emergency. It has communication with every part of the house, the doors being protected by fire-proof arches on every landing. An improvement has been made in the upper and lower box lobbies, viz.—the opening of a window from the front, giving light and ventilation. The flooring in the boxes has been raised 9 inches on each tier. The upper box lobby is reached by new fire-proof stone staircases. Ascending by the route of the refreshment-room to the gallery, new contrivances, adapted to improve the ventilation, are seen. Additional windows have been opened on the right-hand side of the gallery, and the low ugly ceiling at the back has been swept away, and replaced by iron binders for supports. Several openings have been made in the roof, and patent ventilators introduced, which can be opened or shut from the manager's box. One of the principal aims of the lessee has rightly been, in the alterations at the theatre, to obtain better ventilation. In the iron roof several new openings have been made to admit light and air. In the direction of the "auditorium," artistic decorations have been effected by Messrs. Martin & Parvis. The lattice-work in the front of the boxes has been re-gilded, and picked out with pink. The front of the next tier has also been embellished, and miniature specimens of Cupids or Psyches are added in relief. Around the gallery front, at uniform distances from each other, are a number of representations of "stage veterans," in blue medallions. The ceiling has been freshly decorated. The subjects of the figure painting are taken from "Midsummer Night's Dream." Suspended from the ceiling is a new chandelier of 300 gas jets. The staircases, property-room, and refreshment-rooms have all been built on improved principles. Mr. O. C. Arthur prepared the plans for the alterations.

Birmingham.—The public buildings in Moor-street are now complete. By the new erections and the alterations in the old buildings ample accommodation is said to be provided for the business of the borough, and also for holding Assizes should Birmingham be made an Assize town. Additional expense has been incurred in consequence of much deeper foundations being essential, and of warming and ventilating apparatuses having to be re-arranged and extended; also in providing for the reception of water from the Kent-street baths. Other alterations were found essential during the progress of the work which could no tbe omitted without injury. The cost of the work was 5,896*l.* 1s. 2d.; the purchase of land, compensation to tenants, and conveyance, 3,400*l.*; and the architect's commission, 294*l.* 16s., making a total of 10,590*l.* 17s. 2d.

Manchester.—The new bridge over the Irwell, connecting Water-street, Manchester, and Ordsall-lane, or Hampson-street, Salford, to be called Prince's-bridge, has just been completed and opened for traffic. The bridge was designed by Mr. James Lynde, the city surveyor, and has been erected during the last twelve months under his superintendence. The cost of the erection will be defrayed jointly by the Manchester and Salford corporations.——The Public Parks Committee have now completed the arrangements in the Mansion at Queen's Park, for the formation of a free museum. Especial preparation has been made for paintings, sculptures, and specimens, illustrations of natural history, and the other branches of science.

Lynn.—A discovery has been made while the corporation committee were inspecting Purfleet with a view to the proposed tunnelling over of that at present open sewer. It was found that the bridge over the fleet, called "High-bridge," and forming part of High-street, was in a dangerous state, a portion of the foundations having been undermined by the tide (with the aid, it is thought, of rats), and was likely to give way very shortly, in which case the houses and shops built upon it would most probably fall to ruin. Immediate steps were of course taken to avert such a catastrophe by shoring up the bridge; but its entire removal and the opening of a new street on the site of the fleet it is considered would be a great boon to the town, on the grounds of public health and convenience.

Doncaster.—The local board of guardians have received tenders for raising the front entrance of the Doncaster workhouse, for an infirmary, consisting of nurse's room, sick wards, staircases, water-closets, lavatories, &c. Mr. Godfrey, the architect, attended with the plans. Four tenders were opened, and it was unanimously agreed to accept that of Messrs. Robert Wood & Son, builders, at the sum of 600*l.*, and that of Mr. Thrush, for the plumbing and glazing, at 54*l.* 7s., making a total of 654*l.* 7s. The highest offer was 910*l.*: with this exception, there was no great difference between the successful and the two next competitors. The contract is to be completed before the end of October.

Carlisle. — The foundation stone of the new workhouse, which is calculated to accommodate 500 persons, was quietly deposited without any ceremony, and now the works have progressed so far that those concerned in its erection have celebrated the "timber-raising" by giving the workmen a dinner in the dining-hall of the building. One half of the main building, besides the dining-hall and kitchen, had been slated.

CHURCH-BUILDING NEWS.

Maidstone.—St. Faith's Mission (iron) church, Maidstone, has been licensed for public worship by the Archbishop of Canterbury. The building has been constructed on the northern side of St. Faith's-green, where the old church of St. Faith formerly stood, and has been erected mainly through the exertions of the Rev. R. H. Baynes, the incumbent of Holy Trinity. The outward aspect of the building is not at all imposing. Its length is 70 feet; width, 30 feet; and height, 30 feet. The exterior is composed entirely of galvanised iron; and at any time the building can be taken to pieces and removed without damage. The inside walls are constructed of match lining and canvass, covered with paper, while the ceiling consists of deal boards stained and varnished. The pulpit is placed at the eastern end of the building, near the reading-desk and communion-table; and as the church will be used as a school during the week these at such times will be inclosed with a curtain. There are forty-eight moveable seats, which will be sufficient to accommodate 400. The entire cost of the building was about 560*l.* The contractor was Mr. S. Hemmings, of London. The church has occupied only about a month in construction.

Waldron (*Sussex*).—The church of St. Bartholomew, Cross-in-Hand, in the parish of Waldron, was consecrated on the feast of St. Bartholomew, by the Bishop of Chichester. Owing to the closing of the parish church for restoration in the previous year, a service was commenced by the rector in a temporary building at Cross-in-hand. This gave rise to an offer on the part of Mr. J. G. Boucher, of Heatherden House, to build a church at his own expense for the accommodation of the inhabitants of that neighbourhood, the most thickly populated portion of the parish of Waldron. This work has now been completed from the designs of Mr. P. St. Aubyn, by Mr. A. Cheale of Uckfield. The church consists of a nave 50 feet long, with chancel, north porch, and south vestry. The chancel is approached from the nave by three steps, and two more to the sacrarium. The altar-table is on a foot pace. The chancel is fitted "stall-ways" with subsellæ, an oak lectern, and floor paved with Minton's coloured tiles. The nave has benches to accommodate nearly 200, and the floor is paved with red and black tiles of Sussex manufacture. The pulpit, of oak, with stone base, stands at the north-east angle. An octagonal font of Caen stone on four red marble shafts stands on an octagon base at the west end of the nave. A bell-cot rises from the west end of the building, capped with an octagon spirelet shingled with oak. The style of the church is Pointed. It is built of stone raised in the parish, and the windows and dressings are of sandstone from a quarry likewise in Waldron. The east window, of three lights, is fitted with painted glass by Messrs. Lavers & Barraud.

Kenilworth.—Exertions are being made to raise funds for the restoration of the parish church of Kenilworth.

Stafford.—The growing importance of the Stafford railway station, and the letting of land by Lord Stafford on long building leases, have led to the development of an important suburb of Stafford, which is known as Castletown. Some three years ago an effort was made to erect a church and schools for the new district, which forms part of the parish of Forebridge, but the difficulty of procuring a site delayed the realization of the object. Lord Stafford, however, has sold a suitable site, sufficient for a church, school, and parsonage-house, in a convenient position, fronting the river. The sum of 458*l.* 11s. 6d. has been obtained. The school-room, capable of holding 150 children, designed by Mr. Ward, of Stafford, has been erected by Messrs. Adams & Pemberton, of the same place, builders, and may be used for occasional services pending the erection of the church. The land has also been levelled and enclosed by a boundary wall, the total cost being 295*l.* 14s. 7d. It is intended next to build a chancel suitable for a permanent church, and a temporary nave of wood or iron. The cost of this will be about 600*l.*, of which about 300*l.* have been obtained. It is intended that, both in the temporary and permanent church to be erected, the sittings shall be all free.

Barnstaple.—The parish church of Barnstaple is about to be restored by Mr. Scott, architect. The building, which was originally erected in the twelfth or thirteenth century, has been greatly mutilated, the arcades having been taken down about forty years since, and Corinthian columns substituted.

Newark (*Notts*).—The churchwardens have recently caused the porch on the north side of the

pari-h church to be renovated. They have also removed Hilton's picture of "The Raising of Lazarus," which for many years formed an altar-piece, from the north transept, where it was placed at the restoration of the church. It is to be hung over the south entrance.

Wells.—Some recent works in the well known church of St. Cuthbert, at Wells, says a contemporary, deserve record, especially as they have resulted in the discovery of an altar to the Virgin, that had evidently been erected at no very distant period from when it was cast down in fragments by the iconoclasts. Placed on the east wall of the north transept several lines of sculptures, comprising figures of saints with their emblems, soar above one another: in the centre was the Virgin holding the Saviour on her knee. Her dress was the customary blue and red robe, powdered with gold stars. The figures are about 4 feet high, and all sculptured in the late manner of the fifteenth century. On the wall the rows of canopies, with carved tabernacle work, bearing fantracery over the head of each figure, remain marvellously perfect: the roses that had been wrought on the pendants, the cuspings and other details are not to be surpassed for finish and preservation. Upon the entire remains the original colourings, red, green, blue, and white, exist in a vivid condition; and the gilding, which had been profusely employed, is still hardly tarnished. On the corresponding wall of the south transept in the same church has been found a Jesse tree, or genealogy of Christ, carved in stone and coloured. The original contract for the execution of this still exists among the city records, and specifies the price at which the whole was produced, namely, 40*l.*,—a marvellously small sum unless, as was probable, the contract included board and lodging for the carvers at the expense of the corporation during their labours. We are glad to learn there is a probability of the proportions of this church being revealed interiorly by removal of certain galleries and opening the tower-arch, now blocked by the organ.

St. Just (*Cornwall*).—A vestry meeting of the parishioners has been held, to take into consideration the propriety of restoring the parish church. The necessity of this has long since been acknowledged, not only because the building itself was in a most dilapidated state, but also on account of its unfitness for public worship, particularly in the winter time. The present fabric has been standing, subject to a few alterations, for some 300 years; and a great part of the roof, after examination, has been found to be in a state of complete decay. Mr. St. Aubyn, of London, architect, has made a survey of the whole building; and in a report received from him, accompanied with plans, it is stated that more than 1,500*l.* will be required to place the building in a comfortable state of repair. Under these circumstances it was determined to ask the vestry to grant, on the security of the church-rates, a sum sufficient to restore the fabric of the building, in raising the walls, and providing a new roof. On condition of this being acceded to the congregation were prepared to take on themselves the collecting sufficient funds for renovating and remodelling the interior. At the meeting in question the vestry agreed to expend 500*l.* on the fabric, as desired; and subscriptions have since considerably added to the sum.

Gloucester.—A circular, signed by the incumbent and churchwardens of St. Mark, has been forwarded to the parishioners and congregation, with respect to a proposed enlargement of the church. The circular states that the edifice was intended to hold about 540 persons; but it is found that such a number cannot really be accommodated. Besides this, some years ago, an organ was placed in the west gallery, and thus the space intended for school children was diminished. It is now proposed to remove the organ to a chamber which can be conveniently built on the north side of the chancel. By this arrangement the gallery can be applied to its original use. And, further, it is proposed to add a new aisle at the south side of the chancel, by which additional accommodation can be obtained for fifty-six adults, or seventy-four children. The entire alterations would give additional space for at least 120 persons. Larger accommodation is much needed. At a preliminary meeting about 120*l.* were subscribed.

Bridgnorth.—The church at Oldbury is now closed for the purpose of being enlarged. The nave will receive a new roof and other additions, including an octagonal stone bell-turret on the west gable, from designs by Mr. Blashill. The work is undertaken by the rector, the Rev. John Purton, in memory of his only son. A floriated cross will be erected by his sisters in the churchyard, on the site of the ancient cross, the foundation of which still remains.

Monington (*Pembrokeshire*).—The bishop of the diocese has just re-opened this little parish church. It is a small structure with nave, 30 feet by 18 feet, and chancel 20 feet by 15 feet; north porch, and vestry south side of chancel. The style adopted is Early Geometric, with very simple detail. A two-light window lights the west end of nave, north side of chancel and east end, and a couplet of trefoiled lancets, the north and south sides of nave. The walls and all external stonework, are constructed of dressed Pantsaisson stone from a neighbouring quarry; internally, Box ground stone is used for all dressings. The roofs are of red deal, constructed with principals and trefoiled braces, and plastered between the rafters. The western bell gable springs from the ground line, and contains the old bell. The covering to the roofs is local slate, with red tile ridge and crest of Cardigan make, and each gable is surmounted by a carved stone cross, and the bell gable by a gilded weathercock. The seats are simple and open, and accommodate eighty adults, the chancel stalls and prayer-desk being a little more dignified. The floors of passages are paved with party-coloured tiles. Five steps lead up to the chancel; and the altar-table, which is of oak, stands on a footpace. The reredos is composed of stone and tiles. All the woodwork is stained and varnished. The windows are all glazed with pattern glazing, formed with white and green glass. The builders were Messrs. Jenkins & Co., of Cilgerran, who have carried out the work from the designs of Mr. Withers, architect, in a most satisfactory manner, for a sum under 500*l.*

Broseley (*Salop*).—The Memorial Pritchard Church at Jackfield was consecrated on the 20th instant, by the Bishop of Hereford. It is of French Gothic character, and cruciform in plan. The nave is 66 feet long, the chancel 30 feet, and the transept 20 feet. The height of the turret is 75 feet. The upper part of the turret is carried on eight circular columns. These columns are of Forest of Dean stone, surmounted by carved capitals of Grinshill stone. At the west end of the building is a wheel window, 15 feet in diameter, divided into ten compartments, each shaft having a carved capital and modelled base. The workmanship is of several coloured bricks, while those of the arch have been moulded. An effect is also produced by introducing earthenware columns of a deep red colour in the windows and entrance. The roof is covered with red and blue tiles, laid in bands, of an ornamental pattern, and surmounted with decorated cress-stone, and there are iron crosses on the east and west gables, and on the roof of the apse. The roof of the nave is of open deal timber, and divided into four bays, each supported by a carved principal resting upon a projecting corbel. The immediate spaces are filled in with rafters. The spaces between the rafters are plastered and coloured. The chancel and transept roof is divided into panels: each division is marked by a carved rib. All the seating is of oak, and open at the ends. The seats in the chancel have the ends carved with conventional foliage. The inside walls are entirely faced with bricks, in bands of white, red, and blue. No plastering is seen except in the recesses of the windows. The glazing is executed in Powell's cathedral glass, with white fluted glass borders. The tracery is divided into geometrical patterns: that on the wheel window is an elaborate arrangement. The apse works, the chancel flooring, and the steps leading to the chancel, are all laid with Messrs. Maw's encaustic tiles, of geometrical, and, in the borders, scroll patterns. All the ornamental bricks used in the construction of the chancel arch are of a peculiar pattern, and have been expressly moulded for this purpose. The capitals of the columns to the chancel arch have been carved with fern leaves, conventionally treated. The font is of stone, the upper part square. Each side is divided into panels, and supported on four earthenware columns in red, with carved caps and moulded bases. The pulpit is of stone and oak, in character with the surroundings. The font is the gift of the six God-children of the late Mr. George Pritchard. The lectern is of oak, the gift of the Rev. J. Hammond. The altar-table is of oak, the gift of Mr. R. Thursfield, of Broseley. The architect is Mr. Blomfield. Mr. H. Carter, of London, was the clerk of the works. The contractors were Messrs. Nevitt, Brothers, Ironbridge. The carving has been executed by Mr. G. Whittingham, of Newport. The whole cost, including architect's commission, clerk of the work's salary, and other expenses, is 2,500*l.*

Durham.—St. Cuthbert's church, Durham, which has been erected in a portion of the parochial chapelry of St. Margaret's, in order to accommodate the inhabitants living on Framwellgate-moor, and the large population scattered throughout the district, with easier facilities for attending a place of worship, has been opened and consecrated. The whole of the sittings will be free. The church has been built from the designs of Mr. E. Robson, of Durham, and is in the style of the early part of the thirteenth century.

DISSENTING CHURCH-BUILDING NEWS.

Leicester.—A new Wesleyan Chapel has been opened on the Humberstone-road, accommodating about 850 people, at a cost, according to our authority, the local *Advertiser*, of about 2,500*l.* It was designed to accommodate the rapidly-extending population covering the site of the old Cricket-ground and neighbourhood; and is constructed with galleries circumscribing the external walls. By an arrangement of wrought-iron and double walls the usual internal obstacles to the sight and convenience of the worshippers are dispensed with, and the interruption usual to the egress and ingress of the public during service rendered inaudible. The design is executed in gauged brickwork, and of an old-fashioned English character of bricks, made on purpose, embellished and banded with stone, especially wheresoever art-decoration is resorted to. The chapel contains a superficial area of about 5,000 feet, averaging 87 feet long, 55 feet wide, 30 feet high to wall-plate of roof. The general contractors were Messrs. Porter & Clifton. There have also been various supplementary contractors. Mr. Barfield executed the carving of the pulpit and screen (forming the rostrum, introduced for the purpose of missionary and other collective occasions), also the carving of the organ, and generally, throughout, of the stone and wood, with the exception of the terminus in the head of the doorway, done by Mr. Farmer's pupil. Mr. Barfield is also engaged in the execution of the panelling in the face of the pulpit over the Communion table. Mr. Eagles, of London, constructed the organ. Mr. W. Whetstone, of Coalville, supplied the paving-tiles introduced in the vestibule. The system of warming and ventilating adopted has been carried out by Mr. Boyd, London. The arrangement for supply of gas was entrusted to Mr. Webb. The colouring and stencilling of the roof, the painting, colouring, staining, and varnishing throughout have been executed by Mr. H. Smith, of Leicester. The ironwork of enclosure, spouting, &c., was from the foundry of Messrs. Law & Son, of Leicester. Mr. Frederick W. Ordish, of Queniborough, was the architect.

Chelmsford.—The foundation stone of a new Primitive Methodist Chapel has been laid in Hall-street, Moulsham, by Mr. J. A. Hardcastle, M.P. The building in Springfield-lane had long been found inadequate for the growing wants of the congregation, and a short time since a movement was set on foot for the erection of the proposed new edifice at a cost of about 350*l.*, upwards of 100*l.* of which has been subscribed. The chapel will be a plain edifice in the Gothic style, with sittings for about 250, and will be built by Mr. Thomas Moss, jun., from designs by Mr. Thomas Moss, sen.

Bilston.—The Wesleyan chapel of Bilston has been closed for some time, for the purpose of repairs, but is now re-opened. Viewed from the outside, the building presents no remarkable feature, and is, in fact, of the most ordinary "meeting-house" character. In the interior, and occupying the upper end of the building, is a comparatively new organ, flanked on either side by a granite grained pillar. The ceiling has been decorated afresh. The entrance-doors have been altered. The whole of the improvements have been effected at a cost of about 500*l.* Mr. Hickman was the builder employed, and Mr. Beecher the decorator.

Wolverhampton.—The improvements and alterations on the Methodist Free Chapel in Cleveland-street are now completed, at a cost of 350*l.* The chapel has been enlarged by an addition of 9 feet to its general length; and the partition wall, which divided two vestries at the entrance to the building from the body of the chapel, has been pulled down, and the room previously occupied by them has now been made use of for additional sittings. A gallery has been erected for the choir, and the old pulpit at the bottom of the chapel has been removed, and its place supplied by a platform. The whole of the old sittings have been taken down, and the interior of the chapel entirely re-pewed. Two new vestries have also been erected

at the end behind the platform. The chapel has been re-opened for divine service.

Shrewsbury.—The chief stone of a new Baptist Chapel, at Wyle Cop, has been laid. The site of the building is the yard of what was formerly the Spread Eagles Inn. The portion now in course of erection does not necessitate the destruction of the house, which has been converted into two private residences. A temporary brick front is to be erected, which will stand till the purchase-money of the property (780*l.*), and the cost of the present erection, are met, when the houses will be pulled down and the chapel brought out so as to seat 700 persons, without galleries; and it is designed then to erect a stone front. The present building will be capable of seating 400 persons; and the dimensions are 53 feet by 45 feet. The plans, &c., have been drawn by Mr. H. Weatherby, and the work is being carried out by Mr. James Edwards, as carpenter; and Mr. Teekoe, as bricklayer.

Vowchurch (*Flintshire*).—A new Primitive Methodist chapel has been opened at Vowchurch, in the Cwm circuit. The edifice is of brick, and is an unpretending structure. Its total cost was about 190*l.* This is the third chapel the people of the Cwm circuit have opened in twelve months.

Whittington (*Lichfield*).—The memorial-stone of a Congregational chapel at Whittington has been laid by Mr. H. Manton, ex-mayor of Birmingham. The Congregational church at Lichfield has for a number of years used a room in the village for the purpose of assembling for divine worship, the only other place of worship for the 900 inhabitants being the parish church. The room has become too small to hold those who assembled; and ground having been presented by Mr. Ralph Wood, of Manchester, for the purpose of erecting a chapel, an effort was made to obtain the funds necessary to secure the erection of a suitable building, and the result is the laying of the chief stone. The new chapel will be a plain early English building, and is to cost 220*l.*, of which 120*l.* have been subscribed. It will seat 160 persons.

Liverpool.—The foundation-stone of a place of worship in connexion with the Presbyterian Church in England has been laid in Beech-street, Fairfield. The style is Decorated. The plan is a rectangle 77 feet by 39 feet inside, a portion of the west end being reduced in width to obtain a more proportionate elevation externally. In the angles formed by the reduced width of the building will be placed the tower and south porch respectively. A vestry with the usual offices, with basement underneath for coals and warming apparatus, will be provided at the east end. The west front will have a gable pierced with a five-light window, filled in with geometric tracery. At the north-west angle will be a tower of two stages, the lower story forming the principal entrance porch. Another entrance will also be provided on the south-west angle. Above the tower will rise a spire to the height of 90 feet. The side elevations will have windows of two lights each, with trefoil heads, a buttress being placed between each window. The west elevation is to be built with Yorkshire parpoints and Stourton Hill stone dressings; the remaining elevations with gray brick, and stone dressings to windows and buttresses. The interior will have an open roof, with arched principals resting on moulded stone corbels, the rafters to be wrought, and the spaces between them plastered. The seats and all woodwork are to be stained and varnished. The aisles and passages are to be laid with red and blue tiles, and the porches with Minton's encaustic tiles. Accommodation is to be provided for 450 persons; and, by the addition of a west gallery, the accommodation can be increased at a small additional cost. The contract for the building, including warming apparatus and boundary walls, is 2,100*l.* The works are being carried out by Mr. T. Urmson, builder, from the plans and under the superintendence of Mr. W. J. Mason, of Liverpool, architect.

Haydon Bridge (*Northumberland*). — The foundation stone of a new chapel for the use of the Primitive Methodists of this town has been laid.

STAINED GLASS.

St. Ann's, Highgate Rise.—The new window lately put up by Messrs. Cubitt, in the east end of the north aisle of this church, has been filled with stained glass by Messrs. R. B. Edmundson & Son, of Manchester. It is of two principal lights, with tracery head. The subjects are—"Jacob blessing the two Sons of Joseph, Ephraim and Manasseh," and "Christ Blessing Little Children." The tracery is filled with angels bearing scrolls, inscribed with texts and the family arms of Mr. Wm. Gladstone, who has erected this window to the memory of four of his children, who died young.

Chelmsford Church.—The testimonial window subscribed for by the parishioners as a mark of esteem for the services of Mr. William Baker, has been placed in the south chancel of this church. It is by Messrs. Clayton & Bell, who have already provided glass for the eastern end of the edifice. The subject of the window in question is the parable of the good Samaritan, the history being embodied in four compartments:—The first represents the traveller being beaten by thieves: the second shows him lying by the wayside stripped of his clothing, the priest in white robes having passed by, and the Levite, with a backward glance, also walking away: the next discloses the good Samaritan dismounted from his beast, tending the wounded man; and, finally, the traveller is seen mounted upon the mule and about to alight at the inn. In the tracery heads of the window four angels are represented, each bearing a scroll, with the words "Alleluia, Amen." The subject is more Mediævally treated than those of the other windows. In connexion with the improvements in this church we may here notice the alteration recently made in the chancel by the rector. The old pews on the south side have been substituted by three open oak benches, having carved poppy-heads, each representing a different flower. The work has been executed by Mr. Wm. Polley, of Coggeshall, from designs by Mr. Chancellor, architect.

Whitchurch Church.—A stained-glass window has been recently put up in Whitchurch Church, in the neighbourhood of Bristol, in memory of the Rev. Lewis Coyle, late curate of the parish, by his friends and parishioners. The design has reference to the office of the deceased, the centre light representing the Crucifixion, the Great Sacrifice, the Good Shepherd giving His life for the sheep; and the side lights having for their subjects Christ blessing little children, and delivering to the Apostles their commission. In the tracery above is the Good Shepherd seeking the lost sheep in the wilderness, surrounded by angels adoring and rejoicing. The artists were Messrs. O'Connor, of London.

Aston Church, Birmingham.—A window, in memory of the late Mr. Philip Meller Twells, has been placed in the north aisle of Aston Church. The design selected consists of four scenes in the life of Abraham. The first depicts the departure of the patriarch with his wife and kinsman Lot, as recorded in Genesis xiii. The father of the faithful, grasping his staff and pointing to the distance, indicates to his companions, who are attentively listening to his remarks, the direction in which they are about to proceed. The second scene represents Abraham at his tent-door in the heat of the day. He has courteously risen from his seat, and with earnest gesture is inviting the "three men" or angels, as "My Lord," to become his guests. The third view is the offering of Isaac. The last episode is the death of Abraham. Each group is enclosed in an oblong medallion, with a background of blue. In the heads of the lights are trefoils, filled in with symbolical allusions to the Holy Trinity; and the space not occupied by the main figures is enriched with conventional foliated tracery. Each light is surrounded by a fillet of lilies, with leaves alternately green and puce, on a blue ground. In the apex of the window an angel with extended wings, and kneeling, displays a scroll, bearing a text.

SCHOOL-BUILDING NEWS.

Hertford.—New schools for the parish of St. Andrew's are about to be erected on the site of the old rectory-house of the parish, standing in the rear of the church. The present rector has become the purchaser of the house and grounds, and made an offer of the property at the price which he had given for it,—about 420*l.* He has been promised 20,000 bricks towards the erection of schools. A committee of the parishioners has been appointed with a view to ascertain whether the requisite sum could be raised, and the plan carried into effect. Mr. Warleigh's scheme includes not only the erection of schools, which are much wanted in the parish, but the purchase of Sele Cottage as a rectory-house; and that the purchase money of the old rectory should go to pay in part for the purchase of Sele Cottage.

Crowle (*Worcestershire*).—For new schools here, the late Mr. R. Smith, of the Green, gave a site of about three-fourths of an acre, and a general subscription was entered into, and plans and estimates obtained from Mr. Hopkins, architect to the Worcester Diocesan Society. After some obstacles thrown in the way by the Committee of Privy Council, the plans in an altered form were adopted. Accommodation is provided in the new building for upwards of 100 children, including infants. The principal room is 42 feet by 18 feet, with a lofty steep-pitched roof of open timbers, the principals resting on stone corbels. A Decorated window is inserted in the east wall, and there are square-headed mullioned windows in the side wall. This room, besides its primary purpose, will be used as a place for parish gatherings, festivities, concerts, and other entertainments. There is likewise a class-room, with open roof, 16 feet to the apex, and lighted by a three-light, trefoil-headed window; a cloak-room, entrance-hall, and porched doorway. A residence for the master and mistress is provided under the same roof. The building is of brick, with Bath stone facings, alternate white and grey stone in the arches of doors and windows, and a course of ornamental brickwork surrounding the school part of the building, beneath the windows. A fence, lawn, garden, and playground, will complete the work, and it is hoped this will be accomplished by the end of September. The parishes of Huddington, Tibberton, and the neighbourhood, are to participate in the advantages of the school. Mr. Shelswell, of Worcester, is the builder.

Gelligaer (*Glamorganshire*).—A short time since the foundation-stone of the Vochrhiw school buildings was laid: the school-room is now fit for the celebration of Divine service, and has been formally opened. The school is 37½ feet by 20 feet. It has been built by Messrs. James & Price, of Cardiff, from a design by Mr. C. Buckeridge, of Oxford. The walls are of native stone, with brick arches: the tiles are also of native stone. There is a bell-turret. In order to facilitate the extension of the room, a brick arch has been built, forming part of the eastern wall. It is intended to add a chancel at the eastern, and a master's house at the western end, of the present room.

Rotherham.—The foundation-stone of new National schools has been laid at Masbro'. The schools are being built on a plot of ground between Masbro'-street and Station-road, adjoining the residence of the Rev. H. M. White. The chief front will face Station-road, the entrance being in the centre, over which will be a room designed to serve as a parochial library. To the left of the entrance will be a large infant school-room; and on the right a class-room. On the south side is left space for a good-sized playground and offices, and there is also room for the erection of a boys' school-room at some future time. The girls' school-room will be 52 feet by 18 feet, and the entrance 9 feet 9 inches by 16 feet. The whole length of the front will be 132 feet. The entrance to the library will be by a spiral staircase to the tower, the full height of the tower being 45 feet from the base, and the turret of it is intended to be covered with dark shingle. The whole of the inside will be built with bricks of red, buff, and black colours, instead of being drawn with plaster. The roof will be open; and the whole of the structure will be built with hollow walls, for the sake of dryness and ventilation. The estimated cost of the whole is 990*l.* The entire expenses will be borne by Mr. and Mrs. White, who wish in this manner to raise a suitable and permanent memorial to their sister, Miss Alcock. The schools, when complete, will accommodate about 325 children. The builder is Mr. Ripley, of Masbro'; and the plans were prepared by Mr. W. White, of London, brother of the donor.

Pensher (*Sunderland*).—The foundation-stone of a new school has been laid at Pensher. The only school in this neighbourhood till now was that at Shiney-row, limited to the children of the workmen of the Marchioness of Londonderry. There was some difficulty in obtaining a suitable site. The necessity of increased accommodation, however, became so apparent that Mr. George Winter, the owner of the only land available for the purpose, offered a site for a new school-house, and a liberal subscription towards the building fund. A meeting of the inhabitants was held, a committee formed, and an active canvas of the parish for subscriptions was immediately commenced. Mr. Winter, to facilitate the project, offered the committee the loan of 100*l.*, Mr. Leighton, of Lambton, presenting them with a plan. Tenders were at once called for and a contract entered into. The school, when finished, will afford accommodation for 140 scholars, and will be used also as a Sunday school.

COMPETITIONS.

Dublin.—The Archdeacon of Dublin contemplates the erection of a new district church, of large dimensions, on a site leading out of Bagot-street, presented by the trustees of the Earl of Pembroke, the owner of the soil. To select an architect, portfolios of drawings of executed works were asked from Sir Thomas Deane, Messrs. Lanyon & Lynn, Mr. Slater, Mr. Withers, and Mr. T. H. Wyatt. The two last were considered as best suiting the tastes of the promoters, and ultimately Mr. Wyatt's was chosen.

Bridlington Quay Hotel.—The provisional committee of the company received, in answer to their advertisement to architects, several designs for the new hotel proposed to be built by them in the centre of Sewerby-terrace, on the North Cliff, Bridlington Quay; and selected the one submitted by Mr. W. B. Stewart, architect. The design was considered to possess not only the most artistically designed exterior, but a well-arranged plan, containing all the requirements of a first-class hotel, such as fireproof halls, corridors, and staircases. The dining and drawing rooms are each 23 feet by 53 feet, and of suitable height: there is also a billiard-room, 23 feet by 26 feet, with every convenience attached; coffee-room, smoke-room, eight large parlours, and seventy-two bed-rooms, making up eighty beds; besides bath-rooms on each floor, three lifts or hoists, two staircases, bar-parlour and bar, the latter so placed as not only to command the principal entrance, which it faces, but also the corridors right and left. In the basement are the necessary offices, with kitchens 23 feet by 53 feet, tap, good cellars, &c. The company have selected a site facing the sea, which has in addition a southerly aspect. They have also secured a plot of ground in front, containing over 2 acres, which it is proposed to lay out with walks, fountains, &c. They have ample room behind for any future extension, and also for stabling.

St. Stephen's Church, near the Citadel Station, Carlisle.—Miss Burdett Coutts has, from seven designs submitted to her by architects resident within the diocese of Carlisle, selected that of Mr. James Nelson, jun., as the one which she wishes to be carried into execution. Miss Coutts desires that it may be known that, while all the plans proposed to her were much liked, those of Mr. Daniel Birkett, of Carlisle, and Mr. Joseph Bentley, of Kendal, were, in conjunction with those of Mr. James Nelson, deemed most handsome; the last, however, being preferred, because it more exactly suited the form of the site. Miss Coutts, who had previously intimated her intention of subscribing 1,500*l.*, has most generously undertaken to bear the whole cost of erecting St. Stephen's Church, in hopes that the subscribers will permit their contributions, after defraying the purchase of the site, to be applied towards its endowment.

THE ACCIDENT AT BLACKFRIARS BRIDGE.

THE coroner's inquest on Ellis, who lost his life by the accident at the new railway bridge for the London, Chatham, and Dover line at Blackfriars, has been held. The most probable cause of the accident, according to the evidence of Mr. D. S. Sherman, C.E., who made the calculations for the International Exhibition building, was one of the trusses getting out of gauge, and thus causing one of the wheels of the traveller to slip off the rails on to the wood. The only means of avoiding such an accident, he added, would have been by more care being taken by the men superintending the operation of carrying the traveller across. If the four trusses had been connected or tied together with rods, he added, they would, of course, have been stronger, but in the present instance the trusses were so strong that the ties might have been properly dispensed with. Other evidence was led which showed that the work had been newly done, and was not tested, and that the traveller had not before passed across. Mr. Woodford, C.E., who had been employed by Messrs. Peto & Betts to design the stages, attributed the accident to a jerk from the traveller climbing the rails and falling on the wood, which was bruised as by the flange of a wheel. A verdict of accidental death was returned; and the coroner said that Mr. Freshfield, the railway company's solicitor, desired it to be mentioned that in future, when the traveller was about to be removed, the danger signal would be put up, so that steamboats and other craft should not go underneath.

Another accident, from rather singular causes, has since occurred at the same place. During a recent thunderstorm the river suddenly rose, and the current was so rapid, that a barge became unmanageable in passing through the bridge, and struck away the diver's ladder, but fortunately without severing the air-pipes. The diver was safely brought to the surface, though in an exhausted state. During this storm the entire works at the bridge and railway were stopped.

ACCIDENTS.

A LABOURER has lost his life while engaged on the works in progress at Peckham for the London, Chatham, and Dover Railway Extension. In assisting to unload a piece of timber 25 feet in length and 13 inches square, weighing nearly half a ton, he suddenly slipped, and the timber fell right across his stomach, crushing in his ribs and causing such injuries that he expired shortly after in St. Thomas's Hospital.

At the Main Drainage Works, Deptford, a large stack of bricks has fallen on a workman and hopelessly injured him.

A woman has been killed while passing along Royal Mint-street, across which Sir William Armstrong, the contractor, was erecting an iron bridge to connect the London and Blackwall Railway with the London Docks. Two boys were in the act of hammering in a rivet, but they missed the rivet head and struck the plate, which fell and struck deceased on the head with terrible force. She was carried to the hospital, where she died from fracture of the skull. The coroner's jury returned a verdict of accidental death, and recommended that the railway company should in future adopt measures to prevent accidents which endangered the lives of passers-by.

A bridge has fallen at the Potteries, on the Liverpool and Garston Railway, killing two workmen. At the coroner's inquest it was shown in evidence that the arch was built on rock, and had been keyed in on the 20th of August. The centres had been struck when the arch fell. The other arches were constructed in dry weather, but during the construction of this arch the weather was very wet, and about half an hour before the portion of the arch fell from which the centres had been removed, there was a considerable fall of rain, which, it was presumed, had exercised a prejudicial effect on the structure. The inquest was adjourned, that some practical witnesses might give evidence.

At Manchester, on Saturday last, one of the large beams forming the scaffolding of the new fish-market building in Victoria-street, gave way, causing the fall of a large portion of the timber and travelling crane, and killing one man who was passing, and seriously injuring two others. The local *Examiner*, in describing the accident says, "A large number of persons visited the place, and many expressed very decided opinions as to the loose mode in which it is permitted to erect scaffoldings in this city. It seems that in this case, the dangerous condition of the timber, owing to the depth of the excavations, was pointed out some two hours before the accident by a policeman, who states that, on reporting the matter to the contractor, he was told that contractors were not accountable for streets giving way. The same policeman then reported it to Mr. Francis, of the paving department, who said it was the duty of the contractor to keep all safe. The only thing left for the constable to do was to watch until the whole came down; and, in the meanwhile, to warn people who were passing near. It seems that Messrs. Ellis & Hinchcliffe are the contractors for the scaffolding, and Messrs. Worthington for the excavation, and that the cause of the beam giving way was the same which also made the side of the street unsafe for traffic, viz., the removal of earth in digging the cellars, the result being that by degrees the hold became insufficient for the timber lodged in the ground."

A house, in a ricketty back alley, in Gateshead, called the Dark Entry, fell in on Thursday in last week. There were three young children in the house at the time, but one ran out at the moment and fainted at the door; thus, however, securing her escape; and the other two were so buried under cross beams that they were got out uninjured.

In Dublin, the floor and back wall of a house now being built over Mr. Sewell's Horse Repository, Lower Mount-street, has fallen, but fortunately no lives were lost, although a number of workmen were engaged on the premises at the time. Two of them, however, were injured. It is supposed that the recent rain acting on the new work was the cause of the accident.

COMPENSATION CASES.

THE PORTSMOUTH FORTIFICATIONS.

WITHIN the last few days, a court has been held at Fareham, before the Under-Sheriff, Mr. T. Phipson, Q.C., assessor, and a special jury, to determine the amount of compensation to be awarded to Mr. H. P. Delmè, of Cams Hall, Fareham, in consequence of certain rights claimed by the Government under the Defence Act. The rights are connected with land amounting to 180a. 1r. 18p., which is situate in various parishes. Some portion of the land, up to the date of these proceedings, has been the absolute property of Mr. Delmè, property he could have disposed of as he thought proper (he having the fee simple); but a greater portion is part of the family estate, in which he has had only a life interest. With the exception of a few acres, the land is wet, heavy, clayey, and very flat, having about six miles and three quarters of open ditches, varying from 2 feet to 5 feet in depth. It appears that the notice given to Mr. Delmè required all the fences to be taken down and levelled, and all the ditches to be filled up with large pipes and gravel. Filling these ditches, it was contended, would entail a depreciation in annual value of 6s. per acre, or an outlay of 7*l.* per acre.

Mr. Johnson, the counsel for Mr. Delmè, endeavoured to explain to the jury what would be the effect of the rights claimed by Government. The property, whatever its nature, whether adapted hereafter for building or agricultural purposes, would have to be kept free from obstructions, and subject to the clearance rights insisted on by the Crown. Not only must every ditch be filled up, but levelled fences must be kept within 4 feet of the road; and in many instances the banks alone were 4 feet high. The effect of these clearance rights would be to prevent the owner from utilising the resources of the land, and to necessitate arterial drainage in place of the ditches now sufficient for the purpose.

The claim on the part of Mr. Delmè varied, according to the ideas of the valuers, from 4,800*l.* to 5,700*l.*

Mr. C. B. Smith, of Wickham and Portsea, made his valuation, 5,446*l.*, depreciation, exclusive of timber.

Mr. Charles Pink, of Woodend and Southampton, estimated the total annual value of land after clearance rights were exercised, at 220*l.*, which capitalised at 25 years' purchase, gave 5,500*l.*; showing a difference in saleable value of 384*l.* To this he added 25 per cent. for compulsory sale or the depreciation in value of the agricultural land, namely, 2,687*l.*, making 671*l.* 15s.; total 4,512*l.* 12s. 2d.; and to this again, 350*l.* timber, making a grand total of 4,862*l.* 15s.; and that, he said, did not include grubbing woodlands, providing fences, or main or arterial drainage.

Mr. Richard Pink calculated the same total amount of compensation.

Mr. R. Wooldridge, of Titchfield, estimated the total amount at 4,870*l.*, exclusive of timber.

Mr. George H. Appleby, examined at considerable length, testified that the loss in the property on the high road at Fareham, would be 490*l.*, and the residue 4,477*l.*, making a total depreciation of 5,067*l.* This valuation did not include timber, which, if estimated at 350*l.*, made 5,417*l.*

Mr. E. P. Squarey, of Westminster and Salisbury, gave his total estimate of damage, exclusive of fencing, 5,164*l.*, including timber.

The assessor having referred to the important question of drainage as materially affecting the inquiry, an arrangement was entered into, Mr. Hawkins agreeing that if any ditches were filled up, the Government would lay down drain pipes, which should maintain the drainage at present effected by the ditches, or pay a sum of money in lieu of incurring the expence. This conclusion, it may be seen, would materially modify any opinion to be formed of the valuations put forth in the statement of Mr. Delmè's case.

For the Government, the first witne.s called by Mr. Hawkins, was Mr. Clutton. He thought a fair amount of compensation was as follows: damages, to land as agricultural land, 879*l.*; building land (Fareham), 420*l.*; timber, 300*l.*; fencing, 870*l.*; total, 2,474*l.* From this sum the witness would deduct 300*l.* for improving twenty-eight acres by grubbing the woodland, and the eight acres of hedge-row thrown into cultivation.

It was agreed that the timber should be taken at 350*l.*

Mr. Lee estimated the actual loss at 1,191*l.*

Mr. Oakley, of the firm of D. Smith & Co., considered in valuing the depreciation at 1,116*l.* 5s. he was liberal; and Mr. F. Clarke estimated Mr. Delmè's loss at 1,670*l.*

The learned assessor summed up, and the jury found damages for Mr. Delmè's land in Titchfield and Rowner, 2,325*l.*; for building land in Fareham, 400*l.*—total, 2,725*l.*

Since the case was decided, "A Witness," writing to the *Hampshire Advertiser*, has pointed out that no opportunity was given to Mr. Delmè's witnesses to say what deduction would be made by them to meet the circumstances as altered during the course of the proceedings. The cost to the War Department of filling in 6¾ miles of ditches, with pipes averaging from 6 inches to 2 feet diameter, would be 2,000*l.*, which sum would be a contribution to Mr. Delmè towards the thorough drainage of his lands; that sum, added to the verdict of the jury, 2,735*l.*, therefore, would make his compensation equal to 4,735*l.*

On another day, a court was held at the same place, to determine the amount of compensation to be paid to Messrs. Whettam for taking compulsory and restrictive rights over about seventy-five acres of land.

The witnesses called to support the claim of Messrs. Whettam were Messrs. Richard Pink, C. B. Smith, Chas. Pink, G. H. Appleby, and E. P. Squarey. The average valuation of these gentlemen was about 4,000*l.*

The witnesses on behalf of the War Department were Messrs. Clutton, Oakley, Clarke, and Lee, whose average valuation was about 2,400*l.*

The special jury viewed the land, and returned a verdict at a late hour for 3,758*l.* 6*s.*

On a third day, a court was held at Yarmouth, to assess the claim by Mr. Charles Seely, M.P., of 3,100*l.* for land required for a military road. The witnesses called in support of the claim were Messrs. Driver, of London; Chas. Pink, of Wood End; Francis Pittis, of Newport; and J. B. Bird, of Northwood.

On the part of the War Department there were called as witnesses Messrs. Clutton, Clarke, Lee, and Oakley, of London, and Ross, of Alresford, whose valuations were about 1,600*l.*

The special jury viewed the land, and after an inquiry which occupied the greater part of two days, returned a verdict of 2,883*l.*

PATENTS CONNECTED WITH BUILDING.*

COATING OR PROTECTING IRON OR STEEL WITH ANOTHER METAL.—*W. & H. Bowser.* Dated 30th December, 1862.—The arrangements for carrying out this invention comprise a reverberatory furnace for heating the iron or steel, and a chamber in close communication therewith, to which latter the iron or steel is transferred to have the coating metal applied to it. The iron or steel plate, sheet, or other like article to be coated, having had its surfaces rendered as clean as possible, must be heated to about a welding heat, or to such a heat that the copper or other coating metal will melt freely upon its surface. When sufficiently heated, the article is transferred to the coating chamber, wherein there is brought into contact with it the coating metal, in the form of sheets, strips, or grains, proportioned to suit the thickness of coating to be applied in one operation. The article may be subsequently reheated, rolled, hammered, or drawn, without the coating metal becoming separated.

MANUFACTURE OF WROUGHT METAL PILES, COLUMNS, AND SHAFTS. *J. E. Dowson.* Dated 2nd January, 1863.—In forming sheets of metal, each edge of a plate is rolled or formed with an interior flange and rib, and by preference of such exterior form at the butting edges that when the edges of two plates butt together the join between them shall not be a plain or straight line. On the contrary, one butting face is made hollow, undulating, or concave, while the other is made undulating or convex, to fit the hollow undulating or concave face of the neighbouring plate, though this is not essential, as plain or flat butting surfaces may be formed to the flanges. A series of longitudinal plates, such as above described, are used in producing a pile, column, or shaft. The plates forming a pile, column, or shaft, are bound together by metal bands fixed externally, which may be shrunk on, or they may be welded on; or they may be otherwise fixed tightly round in any suitable manner, so as to hold the series of butting plates of which a pile, column, or shaft is composed, securely together; or the plates of which a pile, column, or shaft is composed may be combined or held together in any other convenient manner.

ARTIFICIAL STONE. *E. Sabel.* A communication. Dated 19th January, 1863.—The patentee claims the manufacture of an artificial stone by running molten cinder into large pits or moulds prepared for its reception (in the manner described in the specification), and in allowing the masses obtained to cool gradually.

* Selected from the lists in the *Engineer*.

Books Received.

VARIORUM.

PROCEEDINGS of the Northern Architectural Association for 1860-62. Newcastle-upon-Tyne. Printed by Lambert, Grey-street. 1863. This part of the Northern Architectural Association proceedings contains the paper of Mr. Wilson on "The Momentous Sanitary Question"; and that of Mr. Johnson on "Early French Architecture;" both of them read before the Association. Proceedings in relation to the Architectural Alliance, and correspondence with the Royal Institute of Architects, with other matter, make up the remainder of the publication.——Book-keeping; its Use and Necessity; with hints for the tyro in Government or public official life. By J. P. Ward. Second edition: Klenck, Upper Storer-street, Commercial-road. This is a sensible pamphlet, urging, in a series of brief letters, the advantages of correct bookkeeping to all tradesmen and clerks. It does not profess to set forth any new or complicated system, but contains some useful remarks on the subject, which must tend to keep those benefiting by it out of the Bankruptcy Court.——The Laws of Atmospheric Action in their relation to the Ventilation of Buildings. By John Hay. Glasgow. Printed by William Macrone, St. Enoch-square. 1863. This is a reprint of an essay read at a meeting of the Glasgow Architectural Society on 2nd March, 1863.

Miscellanea.

SOUTH KENSINGTON MUSEUM. — During the week ending 29th August, 1863, the visitors have been as follows:—On Monday, Tuesday, and Saturday, free days, open from 10 a.m, to 10 p.m., 8,793. On Wednesday, Thursday, and Friday, students' days (admission to the public 6d.), open from 10 a.m. till 6 p.m., 941. Total, 9,734. From the opening of the Museum the visitors have been 4,201,821.

ST. PAUL'S CATHEDRAL.—A proposal was lately made by Dr. Rogers (of Dalston and Westminster) to place in the apse of St. Paul's Cathedral a memorial window to his ancestor, John Rogers, prebendary of that cathedral, and the first Protestant martyr in Queen Mary's reign. To that proposal Dr. Milman replied, that the dean and chapter would of course be prepared to consider it, with every desire to respect the memory of the individual to be commemorated. He directed attention, however, to the advertisement; which states that it is proposed to fill the windows of the apse "with painted glass of the highest quality, uniform in style, design, and execution;" adding, "the subjects of the whole (the chief events of our Lord's death, &c.) are determined on. From these conditions—framed after mature deliberation and the most competent authority—we can hardly depart." Recognising the propriety of the regulations, Dr. Rogers intends, we understand, either to adopt one of the proposed designs or to select another window.

PETROLEUM STATISTICS. — From the 1st of January last to June 1st, 10,110,810 gallons of petroleum were exported from New York to foreign ports, against 2,920,089 in 1862. In addition, 5,180,762 were exported from Baltimore, Philadelphia, Boston, and Portland, making a total of 15,221,572 gallons. In all likelihood, remarks the *Boston Courier*, which gives these statistics, as great a quantity has been consumed at home. Only one million of gallons were exported in 1861.——A paper on "The Oil Wells of Canada" has been read before the Canadian Institute by Mr. Sandford Fleming, C.E. In this paper Mr. Fleming states that he ascertained the depth of nine separate flowing wells, at points scattered over the whole oil-producing area, to be as follows:—

The deepest well	is 230 feet in the rock.	
The next deepest	is 208	,,
,, ...	is 200	,,
,, ...	is 182	,,
,, ...	is 180	,,
,, ...	is 163	,,
,, ...	is 158	,,
The shallowest	is 109 }	At present
,, ...	is 109 }	flowing.

CLUBS FOR CLERKS.—The success, at Birmingham, of the Club for Working Men, in Newhall-street, has led to an effort on the part of the local clerks to establish a Clerks' Club.

NEW ACT: TELEGRAPHS.—There are several important provisions in the new Telegraph Act passed at the end of last session. A person in the employ of a company, wilfully or negligently omitting to transmit or deliver a message, or divulging the purport of a message, can be fined 20*l.* The Board of Trade can direct a company to erect a telegraph for the exclusive use of her Majesty; and in case of an emergency, the Secretary of State can, by warrant, seize a telegraph, and have the same worked. A warrant is only to last for a week, but successive warrants may be issued. The Treasury in such cases is to pay the company for the loss sustained.

THE BRICKS OF MARLBOROUGH HOUSE.—A "Constant Subscriber" asks "whence were procured the bricks with which Marlborough House is faced." He considers that they are "so far superior to anything we see now-a-days," that the fact would be an interesting one to ascertain. Our correspondent perhaps is not acquainted with the work in facings of rubbed red brick, as it is executed in some of the northern towns, as those of South Lancashire. In the management of the neat putty joints, much of the work is not very inferior to the brickwork that our correspondent praises, or to that of the orangery in Kensington Gardens, and much of that of Hampton Court.

THE LIGHTING OF THEATRES. — Under the heading, "Theatre-Arrangements," in a recent number, we adverted to what we must now consider culpable negligence, on the part of managers, in the matter of contrivances for the protection of dancers from fire. It is true that the *more recent* catastrophes have not been caused by the lights of the "float," or *rampe;* but accidents are as likely to arise from exposed flame in the one contrivance, as from the lights at the wing, or the fire which is introduced for the purpose of certain effects. We have little doubt that the encasement of the lights at the wing, in the Paris Opera-house, will eventually be accomplished. The form of *rampe* which we have heretofore described, continued when we last heard, to work efficiently for the object referred to, as well as for the view of the stage from the pit, and for the comfort of the singers. Mdlle. Emma Livry, whose dress caught fire at "the wing" in the Paris Opera, as we noticed many months ago, has at length succumbed; and some days since, Mdlle. Dolorès, one of the dancers at the Alcazar de la Bastide at Bordeaux, had a very narrow escape from a similar calamity. She approached too near a frame on which some Bengal lights were burning: in a moment her dress was in a blaze; and she would have been greatly injured but for the presence of mind of one of the actors, M. Paul Legrand, who rushed towards her, and extinguished the fire by crushing her dress together with his hands.

SAND PAPER.—The manufacture of sand-paper is an occupation attended with serious evils. The pulverized sand and glass are placed in fine sieves, and, by gentle motion, the powder is equally distributed over paper prepared for its reception. The distribution is done by the hand; and as it is light work, young boys, hardly relieved from leading-strings, are employed at it. The result is, that the distributor, from the moment his work commences, is exposed to the inhalation of the irritative dust. Dr. Richardson, in a recent lecture, stated that a boy was one day brought before him, fatally struck by a chest affection resembling acute pulmonary consumption. On inquiry, he found that the youth, then engaged at the sand-paper business, was in perfect health until the first day he entered on his work. On his return in the evening to his home, he brought with him cough and pain in the chest, which never left him. Quickly his health failed; and when the doctor saw him only three weeks after the commencement of the labour, his chances of life were over; and he died within a month. Making further inquiry into this business, it was found that the poor youth was the representative of a great class of youths similarly disabled. There were few who ever stood the work. It adds, says the doctor, to the shame of these occurrences that, except in the matter of pecuniary saving in the purchase of young hands, all risk is unnecessary; that, by very simple machinery, the manufacturer might dispense with the distribution by hand altogether; and that the particles of irritative powder need never be so distributed through the air as to be breathed either by the manufacturers or their assistants.

PASSAGE OF SOUND.—A "Surveyor" desires to be informed of means of preventing the transmission of sound through a partition which is formed of plate-glass in an iron frame.

TELEGRAPHIC.—The *Malta Times* announces that the telegraphic communication between that island and Alexandria has been established. The flaw was discovered at a distance of 64 miles from Alexandria, at a spot where a stouter cable had been spliced on to the deep-sea cable when the line was laid, owing to the rocky nature of that part of the coast. The line throughout, between Malta and Alexandria, is now re-opened to the public.

THE THAMES CONSERVANCY.—The report of the select committee of the House of Commons recommends, besides other measures: that a Bill be introduced into Parliament in the next session for creating a new Board of Conservancy for the river; that the Board consist of eighteen members, of whom one-half be nominated by the Admiralty, the Board of Trade, the Trinity House, and the corporation of London; and that the other half be elected by the shipowners, bargeowners, and steamboat owners within the jurisdiction of the conservancy; that the representative members of the Board be elected for a period not exceeding three years, but be eligible for re-election; that the accounts of the Board be annually audited by a duly qualified officer, and presented to Parliament; that the monopoly of the ballastage of the river Thames be abolished, and that the Trinity House be released from all care of the buoys and beacons within the jurisdiction of the conservancy; and that the right exercised by the Watermen's Company to control the navigation of the Thames between Teddington and Gravesend be terminated.

SHAKSPEARE AND THE SITE OF HOUSES IN WORSHIP-STREET.—Last week, in the descriptive matter which accompanied our illustration of the houses and shops recently erected in Worship-street, it was remarked that the site was "said to be that on which Shakspeare was accustomed to take charge of the horses of citizens who had gone in to see the performances at the Curtain-road theatre." A correspondent (Mr. James Hibbert), writing from Preston, refers to the doubts expressed as to the truth of the story, doubts which we were aware of, if indeed we did not participate in them. He says,—"Thomas de Quincey, the English opium-eater, in his biographical and critical paper on Shakspeare, adduces facts and arguments tending to disprove the current tradition that the poet ever held horses for the frequenters of the theatre, or that he was ever convicted of deer-stealing. To those of your readers interested in Shakspeare—and who is not?—the biography by De Quincey contains all the known and authenticated incidents of his life, and is remarkable for the ingenious construction built upon those incidents, so few and slender as they are. De Quincey himself esteemed his contribution to Shakspearian biography as the best of his critical productions, and the most exhaustive of the subject. With no other did he ever take so much pains, certain portions of it having been composed and re-cast three times over."

FREE LIBRARIES.—The second annual report of the Birmingham Free Libraries Committee, presented to the Council in May last, has just been issued. It gives a very satisfactory account, on the whole, of the several libraries in embryo with which it has to deal. The Central Reference Library is fast growing up to completion beside its twin sister, the Midland Institute: the land for the eastern branch establishment will be ready for occupation as soon as the present tenancies have expired; while that for the southern branch is in the actual possession of the committee, who state that they are busy with the preparation of plans to be submitted to the Council at an early date. The Free Lending Library and Reading-room in Constitution-hill were opened in 1861. During the first twelve months of the existence of the library, the average number of borrowers per day was 376, and the total number of books issued 108,053. During the second twelve months the daily average was 377, and the total issues 118,863. The borrowers are mostly artisans, clerks, and assistants in shops, together with office boys and school children; and the books issued are all of a healthy character.——The Birkenhead Free Library also has been very successful, as appears from the seventh annual report.——Measures are being taken for the application of the Public Libraries and Museums Act to Burslem.——There are now sixteen free libraries in Britain. London and Glasgow have the by no means honourable distinction of having formally refused to adopt the Act or to institute free libraries.

THE THAMES TUNNEL.—In the week ending 29th August, 1863, the number of passengers was 14,649, and the amount received in tolls 61*l.* 0*s.* 9*d.*

FINE ARTS EXHIBITION IN LIVERPOOL.—The new Society of Fine Arts, in Bold-street, who have taken the rooms in Post-office-place, formerly occupied by the late Academy of Liverpool, have announced the speedy opening of an exhibition of pictures under their auspices. They are said to have secured 300 pictures from foreign artists; but the local artists, it seems, have refused to co-operate with the new society, and have not been asked to contribute. No advertisement was issued.

THE DISTRESS IN LANCASHIRE.—As we predicted, pauperism here continues to decline: in ten Unions there has been an increase of 590, but in seven other Unions there has been a decline of 1,720: decrease in the third week of August, 1,130. The net decrease of pauperism throughout the whole district, in the thirty-six weeks ending August 15th, was 123,520: this, added to the above numbers, shows a total decrease of 124,650. The improvement is most marked in Ashton-under-line, Blackburn, Manchester, Rochdale, Saddleworth, Salford, and Stockport. Let us hope that this additional cloud is passing away. Aid, however, including that under the Public Works Act, will probably, as we have before said, be needed, perhaps more than ever, for the coming winter. In connexion with the Lancashire trade, it is curious to remark, that notwithstanding the short supply of cotton, the forced idleness of so many thousands, and the American difficulty, the general industry of the country shows a large increase.

DRINKING-FOUNTAIN MOVEMENT. — A new drinking-fountain, the gift of Mr. T. W. Hill, of Clifton Park, has just been erected at the entrance to Durdham-down, Redland, and close to the site of the old pond.——A fountain is to be erected on Duppas-hill, Croydon, at the expense of Mr. Vigus, who has exhibited a plaster model to the local authorities.——Nearly two years ago an offer was made by Mr. Edward Caird, merchant, Dundee, to erect an ornamental drinking-fountain on the High-street in Dundee, if permission were given by the town council. After considerable discussion the requisite permission was granted; and Mr. Caird had a fountain made of Aberdeen granite at considerable expense. Further procedure, however, was stopped by an interdict being served by five persons (not teetotallers, doubtless) resident in the High-street, on Mr. Caird and the town council. The council declined to take any action in the matter, the opinion of the town clerk being that they had no power to grant such permission; and at the recent meeting of the council a letter was read from Mr. Caird, withdrawing the gift.

BURSTING OF A WATER MAIN. — On Saturday morning last, about half-past four, one of the New River mains, which runs close by the General Post-office, in St. Martin's-le-Grand, burst, tearing up the pavement for a considerable space towards Newgate and Paternoster-row. A column of water some feet high immediately rushed from below in a vast volume, and in a few minutes inundated the whole of the street, the torrent rushing along the declivity of St. Paul's Churchyard, and completely flooding the basements of several of the houses in the immediate neighbourhood. On turning off the supply, the water with which the main was charged was soon exhausted. But by this time the basements of several of the adjoining houses were several feet deep in water, especially those of Messrs. Thomas, of sewing-mschine celebrity, Messrs. Perry, the steel-pen manufacturers, and others. When the excavators laid bare the pipe, it appeared that the principal collar of the main at its junction with another pipe, 12 in. in diameter, had been by the pressure of the water loosened; and that eventually the screw bolts had given way. The whole of the thoroughfare from Newgate-street to the Bank was stopped, except for foot-pasengers, till the repairs were completed.

TENDERS.

For the erection of a pair of semi-detached villa residences, in Hornsey-lane, Highgate. Mr. J. W. Reed, architect:—

Browton	£2 989 0 0
Burton	2,980 0 0
Warne	2,800 0 0
Hill & Son	2,570 0 0
Smith	2,427 0 0
Wheen	2,373 0 0
Sale	2,257 0 0
Carter (accepted)	2,150 0 0

For the erection of villa and stables at Bickley, Kent, for Mr. Hastings. Mr. H. H. Collins, architect. Quantities supplied:—

Myers	£3,939 0 0
Fish	2,629 0 0
King & Sons	2,485 0 0
Newman & Mann	2,383 0 0

For a new bridge, Enfield, Middlesex. Mr. Beadmore, engineer:—

Hall & Sons	£350 0 0
Saunders	333 0 0
Cushing	289 0 0
Patman	278 0 0

For new farm premises for Mr. T. Whaley, Northaw Herts. Mr. F. G. Widdows, architect:—

Green & Sons	£1,587 0 0
Hopwood	1,580 0 0

TO PLUMBERS AND PAINTERS

A YOUNG MAN, who has been four years in the trade, wishes for a SITUATION where he could IMPROVE himself in the PLUMBING. Can do gas-fitting, and could fill up his time in painting and glazing.—Address, J. A. No. 7, Alpha-place, Anglian-street, Kentish-town.

A YOUTH, who has had about two years' experience in a Counting-house, is desirous of obtaining a SITUATION in a TIMBER MERCHANT'S or BUILDER'S. Salary not so much an object as an introduction to Business.—Address, H. C. 61, New North-road.

TO PAINTERS, BUILDERS, &c.

A THOROUGHLY good experienced OIL GRAINER, MARBLER, WRITER, &c. wishes for an ENGAGEMENT in or near town. Terms moderate.—Address, W. G. 33, Yardley-street, Warrington-square, Clerkenwell, W.C.

BARNET, Herts. For SALE, by Private Contract, eligible FREEHOLD BUILDING LAND, free from tithe and land-tax, situate close to the Barnet Station, on the Great Northern Railway, and within half an hour's race of the City by the Metropolitan Railway. The views from the Estate are very extensive. Water is supplied from an Artesian well, and the neighbourhood is lighted with gas. The purchase-money may be paid by a deposit of 10 per cent. and the remainder in nine years, by half-yearly instalments, with interest on the unpaid balance at 5 per cent. but the whole or any part of the balance might be paid off at any time without notice. For plans, particulars, and Conditions, apply to Mr. WHITTINGHAM, 14, Moorgate-street, London, E.C.

EAST COWES, ISLE of WIGHT.—For SALE, by Private Contract, a SUBSTANTIAL FAMILY RESIDENCE, with Stabling, Carriage House, &c. Walled Kitchen Garden, and Ornamental Grounds, comprising together about 3a. or. 30p. situate at the mouth of the Medina river, on the East side, nearly opposite the Station of the Royal Yacht Squadron and the Parade at West Cowes, and within a short distance of Osborne. Also several Lots of ELIGIBLE FREEHOLD BUILDING LAND, free of Tithes and Land Tax, adjoining. The purchase money may be paid by a deposit of 10 per cent and the remainder in nine years by half-yearly instalments, with interest on the unpaid balance at 5 per cent; but the whole, or any part of the balance, may be paid off at any time without notice For plans, particulars, and conditions apply to Mr. WHITTINGHAM, 14, Moorgate-street, London, E.C.

REDHILL, SURREY. — For SALE by PRIVATE CONTRACT, a few LOTS of ELIGIBLE FREEHOLD BUILDING LAND. Free of tithes and land-tax; situate close to the Redhill Station, on the London, Brighton, and South Coast Railway. The purchase-money may be paid by a deposit of 10 per cent., and the remainder in nine years by half-yearly instalments, with interest on the unpaid balance at 5 per cent.; but the whole, or any part of the balance may be paid off at any time without notice. For plans, particulars, and conditions, apply to Mr. WHITTINGHAM, 14, Moorgate-street, London, E.C.

WIMBLEDON, SURREY.—For SALE, by Private Contract, in Lots, Eligible FREEHOLD BUILDING LAND, free of tithe and land-tax, situate close to the Wimbledon station, on the South-Western Railway. The purchase-money may be paid by a deposit of 10 per cent. and the remainder in nine years by half-yearly instalments, with interest on the unpaid balance at 5 per cent.; but the whole or any part of the balance may be paid off at any time without notice.—For plans, particulars, and conditions, apply to Mr. WHITTINGHAM, 14, Moorgate street, London, E.C.

TO BE SOLD, Four First-class FREEHOLD BUILDING PLOTS in the parish of Acton. Elevated situation, gravelly soil. Land-tax redeemed. Adjoining a private estate. Water laid on. Plots about 20 feet by 90 feet.—For particulars, apply to W. ROBERTS, 1, Green street, Paddington green, W.

TO BUILDERS and SPECULATORS.—DOVERCOURT, Essex.—The attention of Parties willing to BUILD is requested to the great demand for Houses facing and near to the sea at this delightful and improving watering-place. They would rapidly let, and at good rentals, those already built being occupied principally by private persons.—Every information can be obtained by application to Mr. WM. MOXON, Surveyor, 3, St. Martin's-place, Trafalgar-square, London, W.C. Agent to the Dovercourt Cliff Estate.

GEORGE JENNINGS.
Sanitary and Engineering Depôt, Palace Wharf, Stangate, Lambeth, S.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter FROM SIR RAYMOND JARVIS, Bart. VENTNOR, ISLE of WIGHT.—Second Testimonial: — "March 10th, 1858.—In reply to your letter received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state with much satisfaction, it answers perfectly Many builders and other persons have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here"

N B From this testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES,
18, WHARF-ROAD, CITY-ROAD, LONDON.

AN Eight-horse Cornish BOILER for SALE, in good condition.—Apply to Mr. JNO POUND, Burnt Ash-lane, Lee, Kent, S.E.

IMPORTANT TO ARCHITECTS, ENGINEERS, BUILDERS, RAILWAY, AND OTHER COMPANIES.

VIEILLE MONTAGNE ROOFING ZINC.

Company's General Agency, 12, Manchester Buildings, Westminster.

Zinc properly laid has been proved by most extensive and long experience in France, Belgium, and Germany to be a most secure, durable, and economical covering, and is now preferred to all other materials for roofs. Its extreme lightness makes it most valuable for covering buildings requiring large spans with comparatively light framing. On a rough calculation it may be estimated that not less than 41,000,000 square feet is the average quantity of Roofing surface now annually covered in the above countries alone. Within the last few years persevering efforts have been made to introduce into England proper workmanship, in accordance with the principles which are observed on the Continent, and which alone can secure the sound and perfect construction of a Zinc roof. To aid in extending as much as possible the knowledge of these simple rules, models showing all the details are to be seen in the Architectural Exhibition in Conduit-street, and the following, selected out of a very great number of recently constructed roofs, are referred to as examples:—The Patent Granary, West-India Docks; Copenhagen Works, Limehouse; a private house in Holland Park; Homes for Poor Merchants' Clerks, Muswell-hill; a large Warehouse, 77, Thames-street; Ship roof, Sheerness Dockyard; the Victoria Station, Pimlico; the Stations in the Metropolitan Railway; the Stations of the Madras Railway Company (400,000 feet); the Warehouse of Messrs. Oakes, Brothers, & Co. Madras (20,000 feet); the Refreshment Rooms at the Exhibition; the Verandah of the Horticultural Society's Conservatory; Gloucester Railway Station; Messrs. Horniman & Co.'s Tea Warehouse, Wormwood-street; Messrs. Hoare & Co.'s Brewery, Smithfield; Cape Town and Wellington Railway (30,000 feet); Fifty new Dwelling Houses at Palace Gardens-terrace, Kensington; Twenty ditto, Inverness-terrace, Bayswater.

Plans, Estimates, and all useful information will be furnished, without charge, by applying to either of the Directing Architects.

JAMES EDMESTON, 5, Crown-court, Old Broad-street.
R. G. FISHER, 12, Manchester-buildings, Westminster.

N.B. No covering can be more economical, durable, and secure than Zinc when well laid, but good Zinc badly laid will spoil the roof, and, with a view still further to encourage good work, a special Discount will be allowed to all persons upon the Zinc used in roofs, when certified by either of the above Architects to be properly laid.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It affects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person. 5th. From its lightness, weighing only about 42 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor.

CROGGON'S PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c. and deadening Sound.

INDOROUS FELT, for damp walls at 4d. per yard. Floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c. preventing the radiation of Heat, saving 25 per cent. of Fuel,

Samples, testimonials, and full instructions, on application to

CROGGON and CO. 2, DOWGATE-HILL, London; and 2, GOREE PIAZZA, Liverpool.

SUTTON, near the Station.—PLOTS of FREEHOLD BUILDING LAND FOR SALE. Land-tax redeemed, conveyance free. Also, PLOTS TO BE LET, on a Building Lease, for ninety nine years.—For plans, &c. apply by post, pre-paid, to Mr. TRIBE, Builder, Sutton, Surrey, S.

KEYNSHAM BLUE LIAS LIME and CEMENT WORKS, SOMERSET.—TO BE SOLD by Private Contract, by order of the Liquidator, the newly-formed FREEHOLD WORKS and ESTATE of the Keynsham Blue Lias Lime and Cement Company Limited. The property is freehold, and occupies about 7 acres, 2 roods, and 26 perches, or thereabouts. The works were established for manufacturing lime and cement from stone quarried on the estate, and for making cement, under a patent granted to Captain Scott, R.E. to whom a Prize Medal was awarded by the Jurors of the International Exhibition of 1862, in respect of cement made at these works. The existing kilns and ovens are capable of producing 700 to 800 tons of lime, and 120 tons of cement weekly. Both products are well approved by large contractors and eminent architects, the cement being used in many of the Government fortifications now in progress. Coals are supplied to the works at a very low price, and the Great Western Railway Station is within a short distance. The buildings are very substantial, and the machinery of the best description. The motive power is given by two iron water wheels, driven by the River Chew, a regular and powerful stream of water; and there is a steam-engine, with boilers, if required. Additional supply of lias stone is secured from adjoining owners, on favourable terms. About 10,000 tons will be required.—For further particulars, apply to Messrs. N. LINDO & SONS, Solicitors, 4/4, Moorgate-street; of F. MAYNARD, Esq. Liquidator, 19, Bread-street, Cheapside; and of Messrs. FULLER & HORSEY, 13, Billiter-street, London, E.C.

GROUND for SIX SHOPS, at Woodford, very eligibly situated, close to the church, on the main road, and near the George-lane Station; also to be Let, desirable Plots for detached or semi-detached villas.—Apply to the Freeholder, WASHINGTON SINGLE, Esq. The Grove, Woodford, N.E.

TO CAPITALISTS and OTHERS.—For SALE, the LEASE of a Valuable SLATE QUARRY in Carnarvonshire, in full working order, capable of producing an immediate return of Slates. One mile from a tramroad, by which cost of carriage can be reduced to 3s. 6d. per ton.—Apply to Messrs. TAYLOR & MASON, 13, Fur-deal's Inn, London.

DOVERCOURT, Essex.—A very favourable opportunity now presents itself to builders and others desirous of investing capital in the erection of marine residences. An estate at this delightful watering place, immediately facing the sea and the Esplanade, and close to the railway station, with the roads formed, has been laid out in building plots, and the proprietor is willing to treat for the letting of the same on liberal terms. This beautiful locality stands on an eminence, on a tongue of land on the shores of the German Ocean, commanding extensive and picturesque sea, land, and river views, and embracing many other advantages sought for in a seaside residence. It is about 2¼ hours from London, with direct railway communication, and has become a very favourite watering place, houses being in demand.—For full particulars and plans of the sites, &c. apply to Mr. FRED. CHANCELLOR, Architect, Pinners Hall, Old Broad-street, London, and Chelmsford, Essex.

FREEHOLD LAND TO BE SOLD or LET, on Building Leases, about TWO ACRES, at Forest-hill, near the Station; about ONE ACRE at Norwood Junction Station; about TWO ACRES at Glengall grove-road, Old Kent-road.—Apply to Mr. MAY, Acorn-wharf, Old Kent-road.

GROUND in BASINGHALL-STREET, now occupied by Houses and Warehouses, known as Nos 20 and 21, Basinghall-street, TO BE LET by TENDER, for Building purposes. A plan of the ground and form of Tender may be obtained at the Offices of EDWARD I'ANSON, Esq. No 7A, Lawrence Pountney-hill, Cannon street; or of Messrs. HOLLINGSWORTH, TYERMAN, & GREEN, No 24, Gresham-street, London; where Tenders, under seal, are to be delivered on or before the 14th OCTOBER next. The Owner does not bind himself to accept the highest or any Tender.

BUILDING LAND, TO BE SOLD or LET, on Building Leases, FORTY ACRES of LAND, situate at Hanwell, near the Thames, and close to the intended Station of the Thames Valley Railway.—Apply to Messrs. KENT, 33, Essex-street, Strand.

A LARGE HOUSE, with GROUND for Seven Shops, corner of a high road, and close to an intended station. A first-rate situation, three miles from the City, TO BE LET on LEASE, direct from the freeholder.—Apply to Mr. BIRKS, 11, Clifton Cottages, Clifton-road, Asylum-road, Old Kent-road.

BUILDER'S PREMISES TO BE LET, situated between the City-road and New North-road. The premises are spacious, and adapted for a large business, dwelling-house, stable, &c.—Inquire of Mr. HEBB, 153, Packington street, Islington.

TO CONTRACTORS, BUILDERS, BRICKMAKERS, and OTHERS.—WHITTLESEY, CAMBRIDGESHIRE.—TO BE SOLD, by Private Contract, a very superior and extensive BRICK AND TILE MANUFACTORY, situate about two miles from the town of Whittlesea and four miles from the City of Peterborough, recently fitted up at a very considerable cost with Machinery, Buildings, and every other requisite for carrying on a most extensive business. The Brickfield extends over 9 acres of land, and contains many thousand cubic yards of coarse Gravel and sharp Sand, with an inexhaustible supply of fine Clay, which is perfectly free from stones and ruhbish of every description. The Machinery, which is in first-rate working order, and arranged with a view to the most economy of labour, consists of a highly finished Condensing Beam Engine of 12-horse power, Hoisting Drum and Tackle, Tipping Waggons, Crushing Rollers, necessary Pumps and Tanks; one of Alsaker's Brick and Tile Machines, capable of making from six to eight thousand Bricks, or twelve thousand two-inch Pipes per diem; and also one of Loomes's Patent Brick and Tile Machines, only recently erected, which is capable of pugging and making eighteen thousand solid bricks, or twenty eight thousand two inch pipes in ten hours. The Buildings consist of Office, Pattern Store, Pantile and Plated Sheds, upwards of two thousand superficial yards of drying Sheds for bricks and tiles, together with Pot and other Kilns capable of burning one hundred and twenty thousand bricks at a time. The high road leading from Whittlesey to Peterborough skirts the yard; the Great Eastern Railway forms its south western boundary, and is connected with it by a siding; a private Wharf on the River Nene, belonging to the property, and not more than a quarter of a mile distant from it, affords direct water communication with Peterborough, Thorney, March, Wisbech, Ely, the Holm Station on the Great Northern Railway, and the whole of the fen districts. An acre of land adjoining, together with three Brick and Tile tenements (suitable for the dwellings of men working at the yard) standing thereon, may, if desired, be purchased at the same time. A considerable portion of the purchase-money can remain on mortgage of the Estate, if required. The Machinery may be seen in motion by giving twenty four hours' notice to Mr. EDWARD LOOMES, Whittlesey; from whom also leave to view the Premises may be obtained on application.—For prices and further particulars, apply to Mr. PEED, Solicitor, Whittlesey.

FARNBOROUGH and ALDERSHOTT FREEHOLD and GROUND-RENT SOCIETY (Limited).—To BUILDERS and OTHERS.—Lots 6 and 7 on this Society's Estate at Farnborough, TO BE LET on building lease, or TO BE SOLD, upon advantageous terms.—Particulars may be had of the Architect, Mr. H. CURREY, 4, Lancaster-place, Strand, W.C.; or at the Offices of the Society, 18, New Bridge street, Blackfriars.
EDWARD CHATFIELD, Managing Director.

TO CONTRACTORS.—TO BE LET, the several WORKS required in the ERECTION of THREE CLOTH WAREHOUSES, and several PIPE ROOMS, in Leeds.—The plans and specifications may be seen at Messrs. S. & S. MUSGRAVE'S Wool Warehouse, Bond-street, Leeds, from MONDAY, the 7th, to MONDAY, the 14th day of SEPTEMBER next, and bills of quantities may be had, by written or personal application, at our Offices in Bradford.—Sealed Tenders to be delivered as above, or at our Offices, on MONDAY, the 14th SEPTEMBER, by noon, not necessarily being accepted. LOCKWOOD & MAWSON, Architects.
Post-office Buildings, Bradford, Lincoln's-inn-fields, London

---

BARKING, ESSEX.—TO BE SOLD or LET, the whole or part of 10 acres of FREEHOLD BUILDING LAND, adjoining the Railway Station, fifteen minutes from Fenchurch-street, and with water carriage close by, affording a rare opportunity for manufacture requiring extensive space, but equally available for a public institution, or for the erection of moderate-sized houses. The situation adjoining the stations affords the power of extending railways, in connexion with the existing line, all over the premises, and the soil is gravelly and perfectly dry. If sold, nine-tenths of the purchase money may be paid by instalment to, with 5 per cent. interest; but the whole or any part may be paid off at any time with out notice.—For particulars, apply to Mr WHITTINGHAM, 14, Moorgate-street, London, E.C.; or to Messrs. RUSSELL & DAVIES, 5, Coleman street, London, E.C.

GRANGE PARK, LEYTON.—For SALE, by PRIVATE CONTRACT, eligible FREEHOLD BUILDING LAND, free from tithe and land tax, suitable for the erection of villas or good cottage residences. Situate within ten minutes' walk of the Low Leyton station on the Loughton Railway, and within a mile and a half of the Stratford and Lea Bridge stations, on the Great Eastern Railway. The subsoil is gravel, and water can be procured easily. The purchase-money may be paid by a deposit of 10 per cent, and the remainder in nine years by half yearly instalments, with interest on the unpaid balance at 5 per cent; but the whole or any part of the balance may be paid off at any time without notice. For plans, particulars, and conditions, apply to Mr. WHITTINGHAM, 14, Moorgate-street, London, E.C.

WANTED, to RENT a Detached, Unfurnished COTTAGE, with large Garden, well enclosed, and private. About four bedrooms required. The situation must be high, and not at all lonely, within 20 miles of London. Rent under 50*l*.—Apply, post paid, to C. N. T. care of Mr Nock, 16, Bloomsbury-street, W.C.

BROWN & GREEN'S
PATENT KITCHEN RANGES.
PRIZE MEDAL, 1862.

COLES, SHADBOLT, & CO.
CEMENT MANUFACTURERS,
LIME BURNERS,
BRICK MAKERS,
SLATE, TILE, DRAIN-PIPE, HAIR, LATH, and FIRE-GOODS MERCHANTS,
ST. JAMES'S and THORNHILL WHARFS,
CALEDONIAN ROAD, LONDON.
ROMAN CEMENT made at the above works may be had fresh from the kilns daily,—a great advantage to dealers and sewer contractors, especially in winter time.
PORTLAND CEMENT, of the best quality, strength, and colour, manufactured in Kent. This cement will carry more sand than any of the lias cements, so much of which is now brought into the market and sold as Portland.
PLASTER OF PARIS, both coarse and fine, of very superior quality and colour.
LIME.—Grey Stone, Chalk, and Blue Lias Lime, well burnt, by the barge or yard, and may be had fresh ground daily, by steam power, for concrete.
BRICKS from our fields in Kent, by the barge alongside, in the river or canals, or by cart from the above wharf, of good quality and moderate price.
A large Assortment of Glazed Stoneware Drain-pipes, Yorkshire Plain, Fan, and Paving Tiles, Hair, Laths, Chimney-pots, &c. always kept in stock.
BRICK-FIELDS, LIME WORKS, CHALK, FLINT, AND BALLAST WHARFS,

And are manufactured solely by G. R. KENT & CO.
at 11, Great Marlborough street, London, W.
Established 1777.

KENT'S BRUSHES have been celebrated for their superior quality for the last eighty-six years, and may always be depended upon as the best that can be made.

PRIZE MEDAL, 1862.

HAMILTON & CO.

No. 10, GREEK-STREET, SOHO-SQUARE, LONDON, W.

Sole Manufacturers of

C. A. WATKINS'S PATENT WIRE-BOUND ROUND and OVAL PAINTING BRUSHES.

Distemper Brushes, Sash Tools, Stippling Brushes, Gilders' Graniers' Tools.

These goods are made of the best materials and workmanship, and have obtained a high reputation among the chief decorators in the kingdom. Varnish and Colour Manufacturers, Oilmen, Merchants, &c. are supplied on the lowest terms. Price Lists forwarded on application.

PATENT GRAINING APPARATUS.—

TO HOUSE PAINTERS, GRAINERS, BUILDERS, RAILWAY COMPANIES, SHIP BUILDERS, &c.

One of the greatest improvements of the age is KERSHAW'S PATENT GRAINING APPARATUS, for producing an imitation of the various woods. They are very extensively used, and with great success. They are very cheap, and will repay the cost of them in two days' working. They only require a trial, and any person studying his interest would not be without them. A prospectus will be sent upon the receipt of a stamped directed envelope addressed to T. KERSHAW, Patent Graining Tool Manufacturer, 33, High-street, Marylebone, London, W.

N.B. One of the Patent Graining Tools will be forwarded upon the receipt of a Post-office order for 22s.

TO PREVENT BLISTERS,

AND

REMOVE OLD PAINT, VARNISH, &c.

USE NAENIARE & CO.'S LETHICIUM. Sold at 5s. per gallon. Also, Brushes to apply and remove, 7s. per pair.—For circulars, &c. apply at 11, St. Andrew's hill, E.C. London. Stamps gratuitered.

N.B. Country orders must contain a Cheque or Post-office Order.

TURPENTINE.

GARROD & COMPANY'S ENGLISH TURPENTINE is superior in use to any other, and perfectly free from any offensive odour.

Sample gallons may be obtained at the Manufacturers', price 4s.

GARROD & COMPANY,

Varnish, White Lead and Colour Manufacturers,
56, Upper Thames street, London, E.C.

THE ANCHOR BRANDED TURPS.—

"FACTS ARE STUBBORN THINGS."

Ten Thousand Gallons of this TURPS have been sold during the first three months of its introduction to the trade.

Manufactured only by CARLESS, BLAGDEN, & CO. HOPE CHEMICAL WORKS, Hackney Wick, N.E.

City Office, 2, New London-street, near the Blackwall Railway Terminus, E.C. where samples and all particulars may be had.

Sold by all Oilmen.

N.B.—Ask for the "Anchor Branded Turps."

PENCILS, BLACK LEAD, and

COLOURED CHALKS.

A. W. FABER'S POLYGRADE LEAD PENCILS, sold by all Stationers and Artists' Colourmen.

Sole Agents HEINTZMANN & ROCHUSSEN, 9, Friday-street, E.C

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.

ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent. Whether sold under the name of "Improved Zinc Paint," or as the number Two or Three qualities, no workman can produce good work with such material. Workmen, who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.

CHEAPNESS. Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.

EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK & SON,

WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

THE FLUO-SILICIC STONE-PRESERVING COMPANY, LIMITED.

39, CHARING CROSS, S.W. & 12, COPTHALL COURT, THROGMORTON STREET, E.C.

PATENT FLUO-SILICIC INDURATIONS for the PRESERVATION of STONE, CEMENT, and other like materials. The Company apply to the surface of Stone, Cement, &c. a solution of Fluo-Silicic Acid, and Silicate of Potash. These are the only patents which embrace the use of that most valuable agent, Fluo-Silicic Acid. Bath, Caen, and other soft stones, when treated by the Company's solution, become extremely hard. The great expense of high ornament to buildings in hard stone has been an obstruction to Art; but since the Fluo-Silicic process can be applied so readily to soft stone after it is carved, that obstruction exists no longer. The Fluo-Silicic at once permanently arrests the decay of all stone.—For further information, apply to the Manager of the Company, Mr. DUDLEY, Architect, as above.

BARTLETT, BROTHERS, & CO.

DEVONSHIRE WHARF, CAMDEN TOWN, N.W.

Manufacturers of SILICATES and ALUMINATES of SODA and POTASH,

PATENT INDURATING SOLUTIONS,

For the Preservation of Stone, Cement, &c.;

PATENT SILICEOUS PAINT, FOR COATING BRICKS, CEMENT, STUCCO, &C.

FIRE-PROOF VARNISH,

For Internal Wood Work, Roofs, and Church Work generally. This Varnish renders Wood Uninflammable, and Preserves it from Decay.

Specimens of the Silicates and Aluminates, and of their applications, may be seen at the CONSTRUCTIONAL DEPARTMENT, SOUTH KENSINGTON MUSEUM.

NOTICE OF REMOVAL.

MESSRS. COLLINS & GREEN

Beg to advise their Friends and the Profession that as the London, Chatham, and Dover Railway have taken their late premises at Albion-place, for the new Blackfriars Station, they have Removed their extensive Stock of

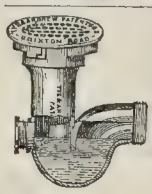
WILLIAM NEWMARCH, F.R.S. Secretary.

UNDERHAY'S PATENT

REGULATOR CLOSETS for constant or intermitting supply, dispensing with Cisterns, Service Boxes, Valves, Levers, Cranks, &c. &c. Much time is saved in Estg. and a better flush of water obtained in use.

Pan, Valve, Self-acting, and Servants' Closets on this principle, may be seen at the Works. They are very cheap, their efficiency is guaranteed, 50,000 of them have been sold, and no instance of failure has occurred.



TO ARCHITECTS, BUILDERS, PLUMBERS, &c.

In consequence of the BANKRUPTCY of the late firm of C. BOTTEN & SON,

F. G. UNDERHAY

now manufactures on HIS OWN ACCOUNT his Patent Regulator Water Closets, Valves Gas Meters, &c on the same premises.

CRAWFORD PASSAGE, CLERKENWELL, LONDON, E.C.

TYE & ANDREWS'

NEW PATENT SINK TRAP is universally admitted to be the only perfect Trap for Sinks in Domestic Dwellings, as fixed at the principal Institutions. Among others, Wellington Barracks, Royal College of Surgeons, &c. &c. Prospectuses on application to the Patentees, TYE & ANDREW, Brixton-road.

SUPPLIED BY ALL LEAD MERCHANTS AND IRONMONGERS.

PRIZE MEDAL AWARDED AT THE INTERNATIONAL EXHIBITION, 1862

THE ARCHITECTURAL POTTERY

COMPANY, POOLE, Dorset, Manufacturers of BALES PATENT INLAND MOSAIC TILES; also superior TESSELATED TILES, 6 inches and 4 inches square, hexagonal and octagonal, &c.; white, red, buff, black, blue, grey, &c. for churches, entrance-halls, corridors, conservatories, lobbies, vestibules, porticos, verandahs, plinths, friezes, string courses, pilasters, &c.; also, white glazed tiles for baths, dairies, &c. They also beg to call attention to their NEW MANUFACTURE OF METALLINE TILES,

6 inches by 1 inch thick, from 63s. per 1,000, delivered to Nine Elms. Also, malt-kiln, ridge, gutter, and hip tiles, buff, glazed, and fire-bricks. Specimens may be seen, and every information obtained, at the Offices, No. 36, Parliament-street, S.W.; also at the Architectural Exhibition, 9, Conduit-street, Regent-street; Kensington Museum; the Fine Arts' Academy; and the Crystal Palace, Sydenham.—Address, The Architectural Pottery Company, 36, Parliament-street, S.W.; or Poole, Dorset.

MINTON, HOLLINS, & CO. Stoke-upon-Trent,

beg to inform architects, the gentry, and others, that, in consequence of the increasing demand for their Encaustic and Mosaic Pavements, and with the view of facilitating the execution of orders, they have opened an additional Show-room, at their Establishment, No. 50, Conduit-street, London, where experienced draughtsmen will be constantly in attendance, to afford all information required.

DRAWINGS and ESTIMATES, on the receipt of plans, will also be promptly furnished, on application at the Manufactory, Stoke-upon-Trent.

MINTON & CO. take the present opportunity of stating that they have always in stock a large and varied assortment of tiles, suitable for flower boxes, stoves, and other ornamental purposes.

PRIZE MEDAL TO MAW & CO. INTERNATIONAL EXHIBITION 1862.

IMPERISHABLE TESSELATED

PAVEMENTS, combining a highly decorative and economical substitute for ordinary floors of their permissible coverings. MAW & CO.'S Pattern book, designed by M. Digby Wyatt, esq., together with a special design and estimate of cost adapted to any given dimensions of hall, passage, conservatory, verandah, frieze, &c. will be sent on application to Benthall Works, Broseley, Salop.

INTERNATIONAL EXHIBITION, 1862. CLASS 35, No. 6849.

3s. 9d.

The ONLY MEDAL "for STONEWARE" has been awarded to DOULTON & WATTS, LAMBETH POTTERY, LONDON

In expectation of a greatly increased sale, D. & W. have determined to introduce the above fixed pattern of their ENAMELLED STONEWARE CLOSET PANS, at the price of the commonest description of earthenware.

Experience has shown that this shape is the most simple and efficient, and that for strength, durability, and cleanliness, it cannot be surpassed by the most expensive closets.

FIGURE "D" STONEWARE CLOSET PAN AND TRAP, 3s. 9d. COMPLETE.

The only PERFECT, SIMPLE, and really EFFECTIVE INVENTION by which Drains can be MINUTELY EXAMINED AT ANY TIME obstructions removed, and CAP-JUNCTIONS of any size inserted (in the event of further connections being required) without breaking a pipe, or disturbing the flow of sewage.

They require no more labour in the laying down, and are supplied at the same price as the ordinary Socket Pipes.

SALT GLAZED STONEWARE SOCKET DRAIN PIPES, INVERT BLOCKS, &c.

Every Article required for DRAINAGE and SANITARY PURPOSES supplied on the lowest terms direct from the BOURNE VALLEY WHARF, NINE ELMS, S., or from the WORKS, near POOLE, DORSET.

FREDERICK INDERMAUR will SELL by AUCTION, on MONDAY, at THREE o'clock, at 29, High-street, Borough, near London Bridge, Large Weighing Machines, Washing Machines, Lawn mowing ditto, Patent Chaff cutting Engines and Slides, Cake-breakers, Turnip-cutters, Hay-forks, &c.—May be viewed, and catalogues had at the Auctioneer's Office, 130, Union-street, Borough.

STOCK IN TRADE OF A TIMBER MERCHANT, UTENSILS, &c.

MESSRS. FULLER & HORSEY are instructed to SELL by AUCTION, on MONDAY, 21st SEPTEMBER, at TWELVE o'clock, on the PREMISES, No. 38, Sun-street, Bishopsgate, in consequence of their being immediately required by the North London Railway Extension, the remaining STOCK IN TRADE of the late firm of Messrs. Sykes, Sons, & Sles, Timber Merchants, consisting of a large assortment of dry planks, deals, battens, cut stuff, floor-boards, mouldings, tenons, &c. detailed particulars of which will appear in future advertisements.—May be viewed on the Saturday preceding the Sale, when Catalogues may be had on the premises, and of Messrs FULLER & HORSEY, 13, Billiter-street, E.C.

TO SAW-MILL PROPRIETORS AND OTHERS.—Steam Saw-Mill, with Engine and Machinery, and Two Houses adjoining, in the Hackney road.

MESSRS. FULLER & HORSEY will SELL by AUCTION, on the PREMISES, No. 193, Hackney road, on WEDNESDAY, SEPTEMBER 16 at TWELVE o'clock in one lot, a desirable STEAM SAW-MILL, with the Engine, Boiler, and Machinery therein, late in the occupation of Mr John High, at a rental of 101l per annum, but now in hand; also the TWO HOUSES adjoining on either side, Nos. 190 and 194, Hackney road (formerly Nos. 5 and 6 Edwards-place), let on leases for the remainder of the term, to respectable tenants, at 44l. per annum; the whole being held for twenty-two years, from Christmas, 1849, at the low rent of 80l. a year. May be viewed till the sale, and particulars had on the premises of Messrs. SPENCE & HAWKS, Solicitors, Hertford; of Messrs. HAWKS & WILLMOTT, Solicitors, 82, High-street, Borough; and of Messrs. FULLER & HORSEY, 13, Billiter-street, E.C.

VALENCIA SLATE SLAB QUARRIES, COUNTY KERRY, IRELAND

MESSRS. FULLER & HORSEY are instructed to SELL by AUCTION, at the AUCTION MART, London on WEDNESDAY, OCTOBER 28 at TWELVE, in one lot, unless an acceptable offer be previously made by private contract, the extensive QUARRIES and MILLS of the VALENCIA SLATE SLAB COMPANY, situate in the Island of Valencia, County Kerry, Ireland. The works have been carried on by the present company for about fourteen years, and a very large outlay has been made in opening the quarries, and in erecting the mills and the requisite machinery. The quarries are situate on the side of a mountain, about 250 feet above the sea level, and an opening has been made for working about 120 feet wide, running into the mountain to about the same depth, uncovering a succession of platforms of slates of various widths. The slate rock lies most conveniently for working, at an angle of about 35 degrees, and has a regular cleavage. The slabs are severed by wedges instead of by blasting, thus avoiding the large amount of waste occasioned by the latter process. The roof of the quarry is self-sustained, and is perfectly secure. The quality of the slabs is now well known and appreciated, and are taken in large quantities by the principal merchants in London and elsewhere. They take a beautiful and permanent polish, are particularly valuable for enamelling, are unaffected impurely by furnace heat, and are raised in larger sizes than from any other quarry. The waste from the slab blocks is made into roofing slates, for which there is ample local demand. The present yield is about 2,000 tons of slate slabs annually, but by a comparatively small outlay in an extension of the workings this quantity may be doubled, the machinery at the mills being equal to prepare that quantity, and the demand at the present time being in excess of the capabilities of supply.

The mills are situate about 2½ miles from the quarries, are connected by a good road of easy descent, which is kept in repair principally at the expense of the county; but every facility would be afforded by the Knight of Kerry, who is the freeholder, for laying down a tramway by the side of the present road, which would much reduce the cost of transit. The mills are most advantageously placed, being immediately contiguous to the pier, at which vessels of 300 tons burden can lie afloat at all times. There are two piers at present, and a market for the slabs at home there is ample proof of the existence and uniform character of the slate, and the extent to which the workings may be carried: and fitted with machinery for the purpose, and most machinery for the preparation of the slate for market, and it is confidently believed that the works are now in that state that, in the hands of two or three individuals, very profitable results may be anticipated.—The Works may be viewed by cards only, which, with further particulars, may be had of Messrs. PALMER, NETFLESHIP, & ELAND, Solicitors, 4, Trafalgar-square, W.C.; at the *Midland Counties Herald* Office, Birmingham; at the Gresham Hotel, Sackville-street, Dublin; at the Railway Hotel, Killarney, at the Adelphi Hotel, Liverpool; at the Mart, London; and of Messrs. FULLER & HORSEY, 13, Billiter-street, London, E.C.

PURE STATUARY MARBLE! and in slabs of large dimensions, can be obtained at M. W. JOHNSON'S MARBLE WORKS, 363, EUSTON ROAD, London, N.W. Prices moderate.

This Granite is selected for the New Westminster Bridge. DRINKING FOUNTAINS, MONUMENTS, and ORNAMENTAL WORKS supplied, and ARTISTIC DESIGNS suitable to the materials forwarded on application. EDGE RUNNERS OF SUPERIOR QUALITY.

GRANITE OBELISK for SALE.—The beautiful OBELISK, in polished Grey Granite, that stood in the Eastern Nave of the Exhibition Building, is now OFFERED for SALE.—Apply to Messrs. H. POOLE & SON, Great Smith street, Westminster. The Obelisk is erected at Lloyd's Wharf, Millbank, where it may be seen. It is suitable either for a monument or for an ornament for pleasure grounds.

LITTLE CASTERTON FREESTONE. Apply for prices, &c. to OCTAVIUS N. SIMPSON, STAMFORD; and see Specimens at the Office of Messrs. PINDER SIMPSON & SONS, 20, Savile-row, London, and at the Museum of Practical Geology, Jermyn-street, W. This stone (which is a perfect oolite), is raised in blocks of any portable size, and is about four feet thick in the bed. It will stand ANY WEATHER, is much used for water-works, and for the building and restoration of churches. When used as ashlar work it is not necessary to place it bed-wise. It works freely with a tooth-saw, and is wrought at a cheaper rate than any stone in the kingdom.

WILLINGTON STONE WHARF, REGENT'S PARK BASIN. HY. GEORGE & CO. The late Proprietor is now conducting the business of the above wharf as the Proprietor and Resident Agent (Mr. JOSEPH CHADWICK).

YORKSHIRE STONE of every description, in Paving, Landings, Sawn Slabs, Headstones, Steps, Coping, Sinks, Curbs, Kerbs, and Bricks, in Bramley Fall, Park springs, Harehill, Robin Hood, Potter Newton, Bretton, and from other approved Quarries.

CONTRACTS.

TO BRICK-MAKERS, DUST COLLECTORS, and OTHERS.—The Works, Buildings, and Sanitary Committee of the Vestry of the Parish of St. Mary Abbots, Kensington, in the County of Middlesex, will meet at the Vestry Hall, Kensington, on FRIDAY, the 18th day of SEPTEMBER instant, at SEVEN o'clock in the evening, to receive TENDERS and to CONTRACT for the SALE and REMOVAL of the COAL DUST, Cinders, Ashes, and Rubbish, from the Houses and premises within the said parish, from the 30th day of September, 1863, to the 29th day of September, 1864. Each days inclusive. The contractor will have to enter into a written contract and bond, and to provide two good and sufficient sureties for the due performance of his contract. The contractor to pay immediately one-fourth part of the money offered by him, and the three succeeding payments in advance of each quarter. The Vestry have divided the parish into two districts, which can be obtained on application at the Vestry Offices, Vestry Hall, aforesaid. No Tender will be received unless made upon one of the said printed forms. Tenders to be sealed, and endorsed "Tender for Dust," and to be delivered at my Office by or before FOUR o'clock in the afternoon of the 18th day of SEPTEMBER. The Vestry do not bind themselves to accept the lowest or any Tender. The expenses of the contract and bond to be paid by the contractor.—By order,

REUBEN GREEN, Clerk to the Vestry.

Vestry Hall, Kensington, September 7, 1863.

CONTRACTS.

WAR DEPARTMENT CONTRACT.

NOTICE to BUILDERS.—TENDERS are required for RENEWING COOKHOUSES, ABLUTION ROOMS, WASHHOUSE, and WORKSHOPS, at Hounslow Barracks, in the County of Middlesex.

Parties desiring to Tender for the ERECTION of these Works must leave their names at the Office from the 21st to the 23rd SEPTEMBER, 1863, inclusive, between the hours of ELEVEN a.m. and THREE p.m. and pay the sum of half a guinea for the bills of quantities, which will be forwarded to each party as soon as prepared by the Government Surveyor.

The Secretary of State does not bind himself to accept the lowest or any Tender.

Royal Engineer Office, London District, 11, James-street, Buckingham-gate, S.W. September 8, 1863.

WAR DEPARTMENT CONTRACT.—

NOTICE to BUILDERS.—TENDERS are required for the CONSTRUCTION of a SEA WALL at the foot of Cliff, in front of Tavenland Battery, near Sandown, Isle of Wight, in Portsmouth District.

Parties desiring to Tender for the execution of the work must leave their names at this office on or before the 16th day of SEPTEMBER, 1863, and pay the sum of ten shillings and sixpence for the Bills of Quantities, which will be forwarded to each party as soon as prepared by the Government Surveyor.

The Secretary of State does not bind himself to accept the lowest or any Tender.

Royal Engineer Office, Portsmouth, 22nd August, 1863.

COAST GUARD CONTRACT.—

NOTICE to BUILDERS and CONTRACTORS.

Persons desirous of TENDERING for the ERECTION of a COAST GUARD STATION at Camber, near Rye, in the county of Sussex, may inspect the Drawings and Specifications at the Watch-house of the Coast Guard Station, Rye, or at this Office, between the hours of TEN and FOUR, from THURSDAY, the 3rd, to TUESDAY, the 15th SEPTEMBER now next ensuing, and both inclusive (Sundays excepted).

Tenders to be sent to this Office not later than TWELVE o'clock at noon of WEDNESDAY, the 16th SEPTEMBER, under seal and directed to the Commodore Controller General of Coast Guard, and endorsed "Tender for Camber."

The Lords Commissioners of the Admiralty do not pledge themselves to accept the lowest or either of the Tenders.

Dated this 29th day of August 1863, at the Admiralty,

Coast-Guard Office, 12, Spring-gardens, London, S.W.

BOARD of WORKS for the STRAND DISTRICT.—To DUSTMEN, SCAVENGERS, and CONTRACTORS.—The Board hereby give notice, that they are prepared to receive TENDERS from parties who may be willing to CONTRACT for the REMOVAL of all SOIL, SLUSH, SNOW, ICE, STRAW, LITTER, REFUSE, and any other matter or thing that may be swept up or otherwise collected in or upon the several foot and carriage ways in the district, and also for the removal of all dust, ashes, and refuse from the several houses, sheds, and other places in the district, for the term of three years from Michaelmas-day next, determinable at the expiration of the first or second year at the option of the Board, of a specification, which may be seen at the Board's Offices, No. 5, Tavistock-street, Covent Garden, daily from TEN till FOUR. The contractor will be required to enter into a bond with two approved sureties for the due performance of the contract. The Board will meet to open Tenders on WEDNESDAY, the 16th day of SEPTEMBER instant, at HALF-PAST SIX p.m. at which hour parties tendering must attend. All Tenders must be delivered at the Offices, 5, Tavistock-street, Covent Garden, before FOUR o'clock in the afternoon of the day of meeting. The Board do not pledge themselves to accept the lowest or any Tender, and no Tender will be read unless a 20*l.* Bank of England note is enclosed therewith as evidence that the Tender is made bona fide, the same to be returned immediately to persons whose Tender shall not be accepted, and retained until the bond and contract shall be duly executed by the party whose Tender shall be accepted.—By order,

JAMES H. F. LEWIS, Clerk to the Board.

No. 5, Tavistock-street, Covent Garden, September 1, 1863

TO BUILDERS.—Persons willing to TENDER for a new PLATE-GLASS SHOP-FRONT and sundry ALTERATIONS and REPAIRS to the HOUSE of Mr. Turnbull, Tobacconist, High street, Chelsea, may apply to see the plans and specification at the Office of Mr. WEBB, Architect, Guy Hastings, Chelmsford, on and after FRIDAY next, the 4th of SEPTEMBER. Tenders to be delivered to Mr. WEBB on or before FRIDAY, the 11th of SEPTEMBER. The lowest or any Tender will not necessarily be accepted.

HOUSE of CORRECTION, Coldbath Fields, To BUILDERS The Visiting Justices will meet at the Prison, on FRIDAY, the 18th day of SEPTEMBER next, at TWELVE o'clock at noon, to open TENDERS for the ERECTION of a NEW BUILDING there. Persons willing to TENDER for the Works may see the plans, specification, conditions, and form of contract and bond at the Office of F. H. POWNALL, Esq. the Architect, 15, Gower street, Bedford square, on any day, between TEN and FOUR, after FRIDAY, the 4th SEPTEMBER next; and they may obtain copies of the bills of quantities and the forms of Tender on payment of a deposit of one guinea, which will be returned on the receipt of a bona fide Tender. The Tenders must be made on the printed form, and they must be sent in, with a sealed-up schedule of prices, addressed to the Clerk of the Peace, Sessions House, Clerkenwell, by EIGHT o'clock in the forenoon of the 18th of SEPTEMBER. The parties Tendering must attend personally, at the Prison, at TWELVE o'clock on the same day precisely, prepared with the names of two responsible sureties. The Visiting Justices do not bind themselves to accept the lowest or any of the Tenders; and if a Tender should be accepted, the person making the same must forthwith sign the draft contract and bond. Persons Tendering are requested to make themselves previously thoroughly acquainted with the terms of the contract, as set forth in the draft, as the Visiting Justices will not consent to any alteration whatever therein.

August 21, 1863. JOHN S SKAIFE, Clerk.

TO BUILDERS.—TENDERS are required for a PAIR of SEMI-DETACHED VILLAS, to be erected on the Northumberland Park, Tottenham.—Plans and specification may be seen at the Office of Mr. W JENNINGS, 69, Cornhill, E.C. The lowest or any Tender will not necessarily be accepted.

CONTRACTS.

COCKERMOUTH, KESWICK, and PENRITH RAILWAY COMPANY. To BUILDERS.—TENDERS are required for the ERECTION of a large first-class HOTEL, at the Keswick Station, according to plans and specifications prepared by Mr. ROSS, Architect, Darlington, which can be seen at his Offices, Feetham, Darlington; or at the Offices of the Cockermouth, Keswick, and Penrith Railway Company, St. John-street, Keswick, from WEDNESDAY, SEPTEMBER 2, to WEDNESDAY, SEPTEMBER 24, 1863.—Sealed Tenders to be delivered to me before TEN a.m. on the last-mentioned day. HENRY CATTLE, Secretary.

Secretary's Office, St. John-street, Keswick, August 28, 1863.

METROPOLIS MANAGEMENT ACTS.

To BUILDERS, CONTRACTORS, and OTHERS.—The Board of Works for the Plumstead District are prepared to receive TENDERS for ERECTING a new BOARD-ROOM BUILDING and OFFICES, upon a piece of ground situate on the southern side of the High street, in the parish and village of Charlton, Kent, S.E. The drawings, specification, and draft contract for the works, may be inspected, and bills of quantities and forms of Tender obtained, upon application at the Office of the Board, at Old Charlton, S.E. between the hours of TEN a.m. and FIVE p.m. on and after MONDAY, the 7th SEPTEMBER next. The Tenders are to be addressed to the Clerk to the Board under a sealed envelope, endorsed, "Tender for Plumstead District Board Offices," and to be delivered at the above-mentioned office in Charlton, not later than FIVE o'clock in the afternoon of SEVENTEENDAY, the 16th day of SEPTEMBER next. The Board do not pledge themselves to accept the lowest or any Tender, and the party whose Tender may be accepted will be required to provide two sureties satisfactory to the Board, which sureties, together with the contractor, must enter into a joint and several bond to the Board in the sum of 500*l.* for the due performance of the contract.—By order,

CHARLES AUGUSTIN SMITH, Clerk to the said Board.

Old Charlton, S.E. 27th August, 1863.

TO DUST CONTRACTORS.—PARISH of CHELSEA.—The Vestry of the Parish of Chelsea will meet at the Board-room, at the Vestry Hall, King's-road, Chelsea, on TUESDAY, the 15th day of SEPTEMBER instant, at THREE o'clock in the afternoon, to consider TENDERS from persons willing to CONTRACT according to the terms and conditions of a specification (a printed copy of which may be had on application to the Vestry Clerk), for collecting and removing the DUST, ASHES, FILTH, and RUBBISH, from the houses and other places within one or the other or both of the two divisions of the said parish, during the period commencing the 30th day of SEPTEMBER instant, and ending the 29th day of SEPTEMBER, 1864. The draft of the contract to be entered into for carrying out the terms of the specification is now lying for inspection at the Office of the Vestry. Parties tendering must sign their names to the Tenders, which are to specify one-fourth of the sum offered as to be paid on the acceptance of the Tender, and the remaining three fourths as provided in the said draft contract, for the sands, charges, and expenses of, and incidental to, the preparation and completion of the contract, to be paid by the contractor upon the execution of the same. Sealed Tenders, signed by the respective tenderers, with the names and description of two sufficient sureties for the performance of the contract, are to be left at the said Office on or before TWELVE o'clock, on the said 15th day of SEPTEMBER instant, but no Tender will be received or accepted unless made on one of the printed forms, to be obtained at the said Office. The Vestry do not bind themselves to accept any Tender. By order,

CHARLES LAHEE, Vestry Clerk.

Vestry Hall, King's road, Chelsea

PARISH of CHELSEA, in the County of Middlesex.—FLINTS.—The Vestry of this Parish will meet at the Vestry Hall, King's road, Chelsea, on TUESDAY, the 15th day of SEPTEMBER instant, at THREE o'clock in the afternoon precisely, to receive TENDERS from persons willing to CONTRACT, for Twelve months from the 29th day of September inst. and ending on the 29th day of September, 1864, for the SUPPLY of the best CLEAN GREY BROKEN PIT ROAD FLINTS, according to a sample to be seen here, to be delivered at the Fire Brick Ground, Chelsea, at such times and in such quantities as may be directed. The Vestry do not bind themselves to accept the lowest or any Tender. Sealed Tenders, signed by the proposed Contractor, with the names and descriptions of two sufficient sureties for the due performance of the Contract, to be delivered to the Clerk by or before TWELVE o'clock on TUESDAY, the 15th of SEPTEMBER instant. The legal charges of the Contract to be paid by the Contractor upon the execution of the same; and no Tender will be received or accepted unless made on one of the printed forms, to be obtained at my Office.—By order,

CHARLES LAHEE, Vestry Clerk.

Vestry Hall, King's-road, Chelsea, September 3rd, 1863.

TO CONTRACTORS.—The Building Committee of Lake-road Chapel, Landport, Portsmouth, are desirous of receiving TENDERS for the ERECTION of a new CHAPEL, &c. Plans and specification may be seen at the Office of Messrs. BAWLINSON & SONS, Architects, Kingston Cottage, Bucklandd Portsmouth. Tenders to be delivered to Mr. CROWTER, 140, Lake road, Landport, on or before the 29th day of SEPTEMBER, 1863. The Committee do not bind themselves to accept the lowest or any Tender.

Portsmouth, September 2nd, 1863.

PERSONS desirous of TENDERING for the LAKE ROAD CHAPEL, Landport, may obtain the Bill of Quantities at the Architect's Offices, on the payment of Ten Shillings.

CONTRACT for GRAVEL.—The Regent's Canal Company are desirous of receiving TENDERS, on or before the 21st of SEPTEMBER next from parties wishing to CONTRACT for METALLING the TOWING-PATH of the CANAL with LIMESTONE GRAVEL. The specification can be seen at the Company's Office. Tenders to be enclosed in a cover, sealed, and marked "Tender for Gravel."—By order,

EDMD. L. SNEE, Secretary.

Regent's Canal Office, Wharf 20, City-road Basin, N.

September 11, 1863.

For remainder of Contracts see next Page.

CONTRACTS.

NORTHLEACH, GLOUCESTERSHIRE.
Northleach Gas light and Coke Company, Limited, incorporated under the Companies Act, 1862.—In the Matter of Contractors for Gas Works.—In order, as all Others—That all persons are desirous of receiving TENDERS for the ERECTION of GAS WORKS, and all necessary apparatus, and to purchase and laying down the mains for lighting the Town of Northleach with gas, and also TENDERS for the ERECTION of a WORKMAN'S COTTAGE.—Plans and specifications may be seen at the Registered Office of the Company, J. H. HOWARD, Chemist, Market-place, Northleach.
Dated, this 8th day of September, 1863.
J. H. HOWARD, Secretary.

TO CONTRACTORS.—In consequence of the Death of the late Contractor, Sealed TENDERS will be received by the Secretary of the Bridge Committee of the Town of Dro heda from the date hereof up to and upon THURSDAY, the 15th day of OCTOBER next.
For taking down the present Bridge over the River Boyne, at Drogheda, and Building in place thereof a Stone Bridge of Eighty Feet Span.
According to Plans and Specification prepared by J. NEVILLE, Esq. C.E. to be seen at my Office, Fair-street, Drogheda; or at the office of the Engineer, Dublin-street, Dundalk, between the hours of TEN and FOUR o'clock every day (Sundays excepted) after this date. The Lowest or any Tender not necessarily to be accepted.
Dated at Drogheda, this 27th day of August, 1863.
HENRY CLINTON,
Secretary to the Bridge Commissioners of the Corporation Harbour Commissioners and Grand Jury of Drogheda.

TO BUILDERS.—Persons wishing to TENDER for the ERECTION of a VILLA RESIDENCE, at Eastbourne, Sussex can see the plans and specifications, and obtain all particulars, by applying to Mr. J. KENT, Bath Villa, Eastbourne, Sussex, from the 14th SEPTEMBER to the 29th SEPTEMBER inst. to which date Tenders may be sent on or before MONDAY, the 5th and 28th SEPTEMBER, at FIVE o'clock p.m. The lowest or any Tender not necessarily accepted.

TO BUILDERS, &c.—TENDERS are invited from Builders willing to CONTRACT for the ERECTION of a DETACHED VILLA, at Bitham, Kent. Plans and specifications can be seen after MONDAY, the 14th instant, at the Office of Mr. CHESTER HAWORTH, Surveyor, Eltham, to whom TENDERS must be sent by FOUR o'clock on THURSDAY, the 24th instant. The lowest or any Tender not necessarily accepted.

TO SCAVENGERS, CARTERS, and OTHERS.—The Works, Building, and Sanitary Committee of the Vestry of the Parish of St. Mary Abbotts, Kensington, in the county of Middlesex, will meet at the Vestry Hall, Kensington, on FRIDAY, the 18th day of SEPTEMBER inst., at SEVEN o'clock in the evening, to receive TENDERS, and to CONTRACT for CARTING and CARRYING away daily, from all streets and places within the said parish of Kensington, all the DUST, Dirt, Filth, Road Scrapings, Sweepings, Slops, Manure, and Refuse that may from time to time be collected together by the servants of the said Vestry, and as may be directed by Mr. JAMES BROADBRIDGE, the Vestry's Surveyor, from the 29th day of September, 1863, to the 29th day of September, 1864 (both days included), and also to receive Tenders and to Contract for the Supply of Horses and Carts, with proper Carters, at per day and per load. The Vestry has divided the parish into two districts, which may be tendered for jointly or separately. Forms of Tender and other particulars may be obtained on application at the Vestry Office, Vestry Hall aforesaid. No Tender will be received unless made upon one of the said printed forms. Tenders to be sealed and endorsed "Tenders for Scavengering," or "Tender for Carting," as the case may be, and to be delivered at my Office by or before FOUR o'clock in the afternoon of the 18th day of SEPTEMBER. The Vestry do not bind themselves to accept the lowest or any Tender. The expenses of the contract to be paid by the contractor. By order, REUBEN GREEN, Clerk of the Vestry.
Vestry Hall, Kensington, September 7, 1863.

TO BUILDERS and CONTRACTORS.
TENDERS are invited for the ERECTION of a PAIR of SEMI DETACHED VILLAS, at Penge.—Plans, particulars, and specifications can be seen at Mr. WAYGOOD'S, Harley Villa, Oakfield road, Penge, on and after SATURDAY, the 12th inst.

TO SEWER CONTRACTORS, BRICKLAYERS, and OTHERS.—The Vestry of the Parish of Chelsea will meet on TUESDAY, the 15th instant, at the Vestry Hall, King's road, Chelsea, at THREE o'clock in the afternoon, to receive TENDERS from persons willing to CONTRACT, for Twelve Months, for the EXECUTION of GENERAL WORKS connected with the SEWERS and DRAINS, according to a schedule of prices now lying at this Office. Copies of the same and of the Contract and form of Tender may be had upon payment of 10s. to be returned to parties Tendering. The Vestry do not bind themselves to accept the lowest or any Tender, and reserve to themselves the right of making Special Contracts if they shall see fit. Parties Tendering must be prepared to execute and pay for a contract, and to provide sureties for the performance of the same if required. Tenders must be upon the printed forms, and be delivered to the Clerk by or before TWELVE o'clock on TUESDAY, the 15th instant.—By order,
CHARLES LAMEE, Vestry Clerk.
Vestry Hall, King's road, Chelsea, Sept. 3rd, 1863.

BRIGHTON.—To BUILDERS.—Persons desirous of TENDERING for the EXECUTION of proposed ADDITIONS and ALTERATIONS at HOOVE LEA, Hove, Brighton, are requested to send their addresses to JAMES WOODMAN, Esq. Architect, 17, Prince Albert street, Brighton, forthwith. Neither the lowest nor any Tender necessarily accepted.
September 10, 1863.

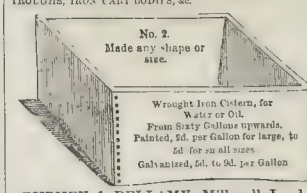
TENDERS for the CONSTRUCTION of GASWORKS.—TENDERS are required for the CONSTRUCTION of GASWORKS at La Seyne, in the department of Var (France), including the supply and laying down of about five miles of mains through the town, and the supply and erection of about 100 public lamps. Particular official notice for the same may be seen at my office, or at Mr. E. H. THORMAN, West Ham Gasworks, Stratford, London, E.; and the tenders, which must be delivered on or before FRIDAY, the 25th of SEPTEMBER, next, are to be sent to Messrs. HUILETT & CO. 55 High Holborn, London, W.C. The Board do not bind themselves to accept the lowest or any Tender.

BELFAST HARBOUR.—EXTENSION of TIME for RECEIVING TENDERS. The Belfast Harbour Commissioners are prepared to receive TENDERS for the CONSTRUCTION of a FLOATING DOCK and a GRAVING DOCK, of large dimensions, according to plans and specifications now lying at the Office of the Commissioners. Separate Tenders, agreeably to the form attached to the specifications, to be addressed to the Secretary, and to be delivered at the office not later than 7th SEPTEMBER next. Detailed plans and specifications can be had by intending contractors at 35 Strand, London, and Belfast. The lowest or any Tender will not be necessarily accepted.
The TIME for receiving TENDERS has been EXTENDED to 5th OCTOBER.
Harbour Office, Belfast, 2nd September, 1863.

LINCOLNSHIRE COUNTY LUNATIC ASYLUM.—To BUILDERS, CONTRACTORS, &c.—Builders desirous of TENDERING for the WORKS in ENLARGEMENT of the COUNTY ASYLUM, at Bracebridge, near Lincoln (such works consisting chiefly of the addition of two wings, for 140 patients), may inspect the plans and specifications at the Asylum, and at the Office of Mr. ROBERT EVANS, Solicitor, Lincoln, on and after the 1st day of SEPTEMBER instant. The work to be commenced early in the spring, and completed by the 1st of MAY, 1865. Forms of Tender, Notice, &c., and Bills of Quantities can be obtained on payment of one guinea, to Messrs. BATSTONE & HUNT, Surveyors, 11, Park street, Westminster. Tenders, &c. to be sent to the undersigned Clerk to the Visitors, at Sleaford, on or before the 31st day of OCTOBER next, sealed up, and endorsed, "Asylum Tender." The Visitors do not pledge themselves to accept the lowest Tender.
M. P. MOORE, Clerk to the Visitors.
Sleaford, 5th September, 1863.

CITY and BOROUGH of WELLS.—To BUILDERS and CONTRACTORS.—The Commissioners of the City and Borough of Wells acting as the Local Board are desirous of receiving TENDERS for the CONSTRUCTION of a New ROAD, and for BUILDING WALLS and SEWERS in connexion with the proposed New Cattle Market, either separately or together, viz. Contract No. 1.—For the Construction of about 1,100 perches of Boundary Walls and laying about 300 yards of Stoneware Pipe Drains. Contract No. 2.—Excavating for and forming about 230 yards of new Road, 35 feet in width, with foot-paths each side 5 feet in width, from the Priory road to Tucker-street. Plans, sections, and specifications may be seen at my Office. Tenders to be sent to W. J. B. POSTER, Esq. Town Clerk and Clerk to the Local Board, before noon MONDAY, the 21st of SEPTEMBER instant, endorsed, "Tender for making New Road, &c." The Local Board do not bind themselves to accept any Tender.—By order,
GEORGE TOMPKINS,
Surveyor to the Local Board, Chamberlain-street, Wells.
Wells, 8th September, 1863.

EXTENSION OF TIME.
TO ARCHITECTS and OTHERS.—The Committee are desirous of receiving PLANS and SPECIFICATIONS for BUILDING a NEW CONGREGATIONAL CHURCH at Ringwood, Hampshire. To have one gallery, and to seat 350, exclusive of such gallery, which is to seat 150. To be built with Swanage stone, and in correct all the stones in the front to be squared, with the best Boxhill ground dressings; or with white or red brick, with stone dressings. A minister's vestry and site for organ is required, but no school-rooms. The cost is not to exceed £600. A ground plan of the site may be obtained on application to Mr. H. HOLLOWAY, Surveyor, Ringwood. The person whose plan is selected will be appointed architect. Plans and specifications to be sent, sealed, on or before the 10th of OCTOBER next, to HENRY RUMSEY, Secretary to the Building Committee, at the Wilts and Dorset Bank, Ringwood.
Dated 2nd September, 1863.



TO CONTRACTORS.—TO BE LET, the several WORKS required in the ERECTION of THREE CLOTH WAREHOUSES, and several PIECE ROOMS, in Leeds. The plans and specifications may be seen at Messrs. S. & S. MUSGRAVE'S Wool Warehouse, Bond street, Leeds, from MONDAY, the 7th, to MONDAY, the 14th day of SEPTEMBER next, and bills of quantities may be had, by written or personal application, at our Offices in Bradford.—Sealed Tenders to be delivered as above, or at our Offices, on MONDAY, the 14th SEPTEMBER, the lowest not necessarily being accepted. LOCKWOOD & MAWSON, Architects.
Post-office Buildings, Bradford, Lincoln's-inn-fields, London.

THE PRIZE MEDALS

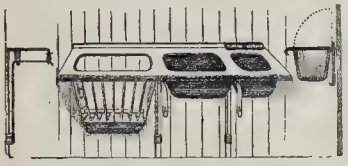
(LONDON, 1851. PARIS, 1855. LONDON, 1862)

Awarded to

COTTAM & COMPANY,

2, WINSLEY STREET, LONDON, W.

For progressive and general improvements in



STABLE FITTINGS AND HARNESS BRACKETS.

Awarded a prize at the Paris Exhibition,

Patronized by the English and French Governments, as well as by the principal Nobility, Gentry, and Hunting Establishments in the Kingdom

In use at her Majesty's Stables, Aldershott and Balmoral.

COTTAM & COMPANY, Winsley-street, W. are the original Inventors of the PATENT ENAMELLED MANGER, Water-trough, and Wrought-iron Rack, united to an iron top-plate, and forming one complete and useful fixture, having COTTAM'S Patent Noiseless Halter Guide and Collar Rein attached, which is taken to the back of the manger, and works with ease and freedom up or down the guide-bar.

COTTAM'S NEW PATENT BEED BOX, an important addition to the above fittings, being simple in construction, light, and durable, promotes cleanliness, and is economical in its results.

COTTAM'S PATENT PERMANENT ATTACHED DROP COVER, for the above, is a most essential addition to their fittings; it is never in the way; can be placed and replaced in an instant; while its cheapness, simplicity, and utility in keeping the contents of the trughs clean, and regulating the quantity to be taken, is quite sufficient to insure its use.

COTTAM'S PATENT SADDLE AND HARNESS BRACKET COMBINED

can be used with great advantage where space is an object, as it can be turned up out of the way when not in use.

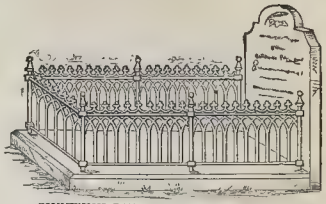
COTTAM'S IMPROVED WROUGHT-IRON VENTILATING BRACKET preserves the shape and allows a free admission of air to the under parts of the saddle.

COTTAM'S IMPROVED SURFACE GUTTER, with perforated moveable cover, the use of which prevents accidents, and can be easily cleaned out.

COTTAM'S CAST-IRON SANITARY TRAP, from its improved construction, gives a full water passage, and does not allow any smell to ascend from the drain.

PATENT LOOSE-BOX FITTINGS, and every article for the harness-room and stable, kept in stock, plain, galvanised, and enamelled. Iron gates, fencing, hurdles, &c.

Illustrated Catalogues and Estimates gratis, upon application to



COTTAM & CO. 2, WINSLEY STREET, Oxford Street, London, W.

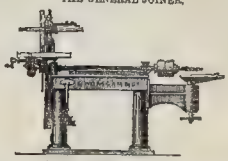
WHERE FULL-SIZED STALLS, LOOSE BOXES, AND HARNESS-ROOM, &c. ARE FITTED UP, SHOWING ALL COTTAM'S PATENT IMPROVEMENTS, &c.

COTTAM & CO.'S only address in London, is 2, WINSLEY STREET, W.

N.B.—WINSLEY STREET IS THE STREET OPPOSITE THE PANTHEON.

IRON RAILINGS, for enclosing TOMBS AND GRAVES,

COMMUNION RAILINGS, SCREENS, GATES, &c.



Illustrated price catalogue, of numerous designs, in various styles (free), on application to

COTTAM & CO. IRON WORKS,

2, WINSLEY-STREET, OXFORD-STREET

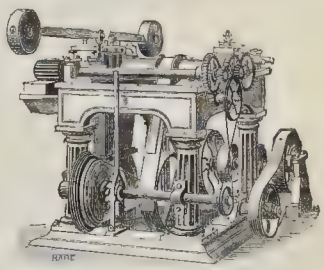
LONDON, W.

S. WORSSAM & CO.'S PATENT THE GENERAL JOINER,

(¼-inch scale.)

This exceedingly useful and novel machine is adapted for sawing, cross-cutting, grooving, tongueing, rabbetting, tenoning, moulding, and boring; and will be found invaluable in any joiner's or builder's establishment. It is also specially useful for box making, and is fitted with a slide-plate for squaring the edges of drawers, &c.—For priced Illustrated Circulars, with full particulars, apply at the Works, 304, King's road, Chelsea, S.W.

POWIS, JAMES, & CO.



SAW MILL ENGINEERS,

Victoria Works, Blackfriars-road, London.

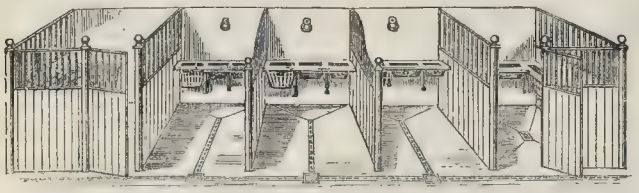
LONDON OFFICE, 3, ADAM STREET, ADELPHI, W.C.

CAUTION to ARCHITECTS and BUILDERS.

In consequence of complaints arising from the substitution of INFERIOR and SPURIOUS ARTICLES instead of SMITH'S PATENT DOUBLE-ACTION DOOR SPRINGS; SMITH'S PATENT WEATHER-TIGHT WATER BAR, and SMITH'S PATENT WEATHER TIGHT CASEMENT FASTENING for FRENCH WINDOWS:

The above are most respectfully requested to observe that all GENUINE ARTICLES are stamped with the NAME and ADDRESS, SMITH, Patentee, 69, Princes-street, Leicester-square, London; and SUCH ONLY are WARRANTED.



NOW OPEN, YOUNG'S IRONMONGERY WAREHOUSE,

No. 24, Davies-street, Three Doors from Oxford-street.

For the supply of Builders, Carpenters, Upholsterers, Smiths, Bell-hangers, and the Trade in general, at wholesale prices. In connection with his Old Establishment, No. 18, Blandford-street, Manchester-square, running out of Baker-street, Portman-square, London, W.

BARTON'S PATENT PRIZE MEDAL STABLE FITTINGS
AND ENAMELLED MANGERS.

These SUPERIOR-CLASS STABLE FITTINGS are PATRONIZED by the PRINCIPAL NOBILITY, and ADOPTED by many of the FIRST ARCHITECTS and BUILDERS of the United Kingdom.

J. BARTON solicits attention to the NEW STABLE just completed, with full-size Stalls, Loose Boxes, and Harness Room, now open for inspection, at the Manufactory, 370, Oxford-street, where an extensive assortment of all kinds of Stable Furniture, upon the most modern and improved principles, are to be seen.
A new Illustrated Catalogue, with numerous engravings of the improved method of fitting up Stables, forwarded on receipt of four stamps.

JAMES BARTON, IRON WORKS, 370, OXFORD STREET, LONDON, W.

HOT-WATER PIPES,
For Heating Conservatories, Warehouses, &c. supplied and fitted on the most improved and economical Principles.

PUBLIC AND PRIVATE GAS-WORKS ERECTED.

Works—London and Birmingham.
PRINCIPAL DEPOT AND SHOW-ROOMS,
147, *Houndsditch, City.*

BROWN & GREEN'S
PATENT KITCHEN RANGES.
PRIZE MEDAL, 1862.

These Ranges combine the latest improvements with great simplicity and durability. They afford facility for roasting meat in front of the fire without interruption to the action of the oven, hot plate, boiler, &c. The Ovens are well ventilated, and perfect either as roasters, or for baking bread or pastry. For Efficiency, Economy, and Ventilation, and

CURE OF SMOKY CHIMNEYS,

these Ranges are unequalled. They are of all sizes and prices; and the large ones, fitted with Bath and Steam Apparatus, &c. form the most complete appointment for large establishments. Designs, &c. may be had on application at THE LONDON WAREHOUSE,

81, BISHOPSGATE STREET WITHIN.

"One of the best arrangements of the 'Kitchener.'"—See *Builder*, Sept. 6, 1862.

BUILDINGS AND SHIPS EFFECTUALLY SECURED AGAINST LIGHTNING.

PATENT LIGHTNING CONDUCTORS,
according to the system of Sir Snow Harris, F.R.S. as now universally adopted in every department of the Public Service, supplied and carefully fitted in every detail, under the immediate instructions of Sir Snow Harris, by G. W. GRAY, who has effectually secured a large number of ships, public buildings, and magazines against the destructive agency of lightning, including the Houses of Parliament, magazines, afloat and on shore, of the War Department and many churches and other important structures. Buildings surveyed, and plans and estimates submitted, if called for.
J. W. GRAY & SON, 114, Fenchurch-street, E.C.

PROTECTION from LIGHTNING.
HART & SON
Beg to call the attention of Architects, Builders, and the public to their
IMPROVED LIGHTNING CONDUCTORS
(SPRATT'S PATENT),
As presenting the MOST EFFECTIVE MEANS of OBTAINING SECURITY from LIGHTNING. They are economical, easily fixed, and APPLICABLE TO ALL BUILDINGS, including Private Houses, Churches, Chimney-Shafts, Dairies, Powder Magazines, &c. &c.
Price lists and estimates on application.
HART & SON,

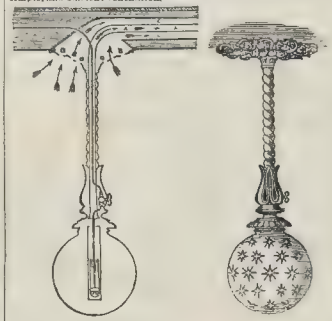
THE INTERNATIONAL EXHIBITION PRIZE MEDAL, AWARDED 1862.
ESTABLISHED 1744.

AUSTIN'S IMPERIAL PATENT SASH
and BLIND LINES
To BUILDERS, CARPENTERS, and BLIND MAKERS.
J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his



IMPERIAL PATENT FLAX SASH-LINES,

of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.
They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

REDMUND'S PATENT HINGE MANU-
FACTORY and WAREHOUSE, Wellington Foundry, No. 68, Charles-street, City road, E.C. near the Canal Bridge.

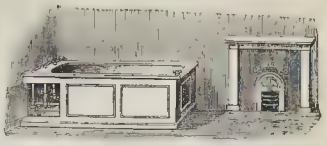
laying asphalte floors. Three times highly recommended by the Royal Agricultural Society. The cheapest and best kind of floor, impervious to wet, and vermin will not touch it—Full particulars sent free by
WOODS & COCKSEDGE,
IRONFOUNDERS, STOWMARKET

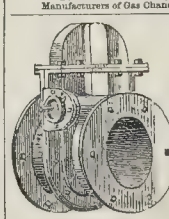


RICKET'S & HAMMOND'S
VENTILATING GLOBE LIGHT,
combining an agreeable method of lighting, with convenient, simple, and efficient ventilation.

The advantages obtained are these.—
A TOTAL REMOVAL OF ALL PRODUCTS OF COMBUSTION.
A COMPLETE DISPLACEMENT OF HEATED AND VITIATED AIR.
AND A CONSIDERABLE ECONOMY IN THE CONSUMPTION OF GAS.
A GLOBE LIGHT will consume 5 to 7 feet of gas per hour, giving as much light as an ordinary three-light chandelier, with a consumption of 12 feet per hour.
5, AGAR STREET STRAND, LONDON, W.C.

PERIN'S PATENT BAND SAWS.—
S. WORSSAM & CO beg to announce that they have purchased of M. PERIN, of Paris, the exclusive right to sell his celebrated Band Saws in the United Kingdom, and that they keep a large assortment at their works, 304, King's-road, Chelsea, S.W.

J. TYLOR & SONS' PATENT BATH
APPARATUS.



The bath and boiler may be fixed in the same or separate rooms, anywhere below the level of cold-water cistern. Open or close fire at pleasure. No brickwork setting for boiler required.
Estimates given from architects' drawings, or by inspection of buildings.
Catalogues, containing Nine Illustrations of different methods of heating baths, sent on application to the Manufacturers, J. TYLOR & SONS, Warwick-lane, Newgate-street, London.

SNOXELL & CO.'S

PATENT REVOLVING SHUTTERS IN IRON OR WOOD.

BRASS SASH BARS, STALL BOARD PLATES, AND BLIND MAKERS.

96, REGENT STREET, W.; MANUFACTORY, 35, OLD STREET, E.C.

IMPROVED REVOLVING SHUTTERS.

FRANCIS & CO.

Having made great Improvements in the manufacture of Wood or Iron Revolving Shutters, are enabled to supply the public at the following reduced prices:—

Wood Revolving Shutters, with all requisite Gearing complete, from 2s. per foot. Iron Revolving Shutters, with all requisite Gearing, complete from 3s. per foot, suitable for Banking Houses, Public Buildings, Offices, Shop Fronts, and Private Houses.

Brass Drawn Sash Bars and Brass Stall Plates at a great Reduction in Price.

ILLUSTRATED PROSPECTUSES and TESTIMONIALS FREE BY POST on application at 174, GRAY'S INN ROAD, HOLBORN, LONDON.

REDUCTION IN PRICE OF

CLARK'S

NEW PATENT REVOLVING SHUTTERS,

FOR

SHOP FRONTS AND PRIVATE HOUSES.

THE MOST SIMPLE, LIGHT, SECURE, AND CHEAP SHUTTER EXTANT.

Wood Revolving Shutters	.....	2s. per foot super.
Wood Self-Coiling	do.	2s. 6d. do.
Iron	do. do.	3s. do.
Steel	do. Fire and Thief Proof..	3s. 6d. do.

BRASS SASH-BARS, STALL-BOARD PLATES, &c. &c.

15, Gate-street, Lincoln's Inn Fields, W.C. AND 4, MARKET STREET, MANCHESTER.

THOMAS MILLINGTON,

GLASS MERCHANT,

87, BISHOPSGATE STREET WITHOUT, LONDON, E.C.

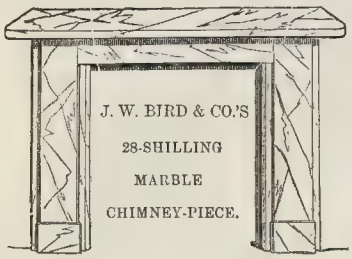
Reduced Tariff for Sheet Glass.

The Agricultural Hall, Islington, containing an Acre of Glass, was supplied by me. Mr. Rivers, and the leading men in the Horticultural profession, as well as the Nobility, Gentry, and Merchants, have favoured me with orders for home use and for exportation.

FOR PRICES, SEE LAST WEEK'S ADVERTISEMENT.

BATH STONE OF BEST QUALITY.

RANDELL & SAUNDERS, Quarrymen and Stone Merchants, Bath.



List of Prices at the Quarries and Depôts, also Cost for Transit to any part of the United Kingdom, furnished on application to BATH STONE OFFICE, CORSHAM, WILTS.

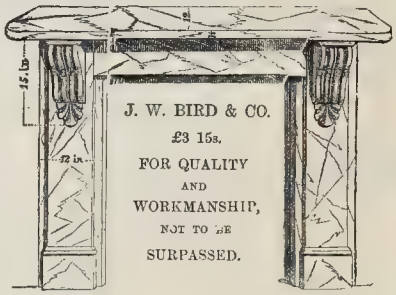
BATH STONE OF THE BEST QUALITY.

PICTOR & SON, Quarry Proprietors and Stone Merchants, Bath.

Lists of Prices at the Quarries and Depôts, also Cost of Transit to all parts of the Kingdom, forwarded on application to BATH FREESTONE WORKS, BOX, NEAR CHIPPENHAM, WILTS.

MARBLE & STONE CHIMNEY-PIECES FOR THE MILLION.

PRICE LIST ON APPLICATION.



A Stock of 500 *always to choose from at*

J. W. BIRD & CO.'S,
THE EMPORIUM,
145 & 143½, EUSTON ROAD,
N.W.

A Marble Box Chimney, with 8-inch piers, as Illustrated, for 28s. and fitted to any opening up to 3 feet square.

STONE DITTO, WITH BEAUTIFUL MOULDED CAPS, FOR SEVEN SHILLINGS.

Monuments and Tablets in great variety, equally low in price.
Masons' Work of all kinds contracted for and executed with despatch, in Town or Country.
A VACANCY FOR AN OUT-DOOR APPRENTICE.

VIEILLE MONTAGNE ZINC.

THE ITALIAN-FORMED ZINC is much approved of by Architects and Engineers on account of its strength, durability, and appearance. On account of the light framing required, roofs, including framework and fixing, can be covered with it FOR £3 PER SQUARE up to 25 feet span. Sheds of larger span, including posts, 4*l*. per square. Architects are cautioned against allowing anything thinner than No. 13 gauge (20 oz.) to be used. ALL PLATES SHOULD BE REJECTED NOT BEARING, in addition to the Company's name, the words "ROOFING ZINC," and the gauge.

OLD ZINC RETAKEN AT HALF THE MARKET PRICE OF NEW.

For Designs and Estimates for Roofs, with Timber or Iron Framework, IRON CHURCHES COVERED WITH ZINC, and Buildings for the Colonies, apply to

THE COMPANY'S SURVEYOR,
12, MANCHESTER BUILDINGS, WESTMINSTER, S.W.

JAMES W. TYLER, CONTRACTOR FOR

DEVAUX'S VIEILLE MONTAGNE THICK ZINC ROOFING,

ON IMPROVED PRINCIPLES.

12, ABINGDON STREET, and 4, WOOD STREET, WESTMINSTER, close to Victoria Tower.

Estimates furnished for every description of Zinc Roofing and Guttering, inclusive or exclusive of Timber or Iron Framing, in all parts of England. Having for several years been actively employed in laying DEVAUX'S THICK ROOFING ZINC (the purest extant) upon the new principles introduced by Mr. Edmeston, Mr. Tyler can refer with confidence to work done as his best recommendation.

Good Zinc badly laid will still be a failure, for there is much more importance in the mode of laying than is yet generally known; and parties who will entrust their work to Mr. TYLER will find that this important point is thoroughly attended to, and at no extra cost.

This Zinc thus laid is quite as lasting as lead, if the woodwork is arranged according to Mr. Tyler's directions.

PAPIER MACHE AND CARTON PIERRE WORKS,
49, RATHBONE PLACE, W.
GEORGE JACKSON AND SONS
(Established in 1780)

Beg the attention of Architects, Builders, Decorators, and the trade in general, to their large assortment of Enrichments for Ceilings and Cornices, in the Gothic Elizabethan, Italian, Renaissance, Louis XIV. XV XVI and many other styles; also rich or simple Panel Decorations, Elizabethan and Gothic Dados, Iron Cups, Mouldings of all sorts, and to their varied selection of Centre Flowers for Ceilings, Gothic Bosses, Trusses, Trusses, Trusses and Pilaster Caps, all executed in the highest style of art.

The large and lengthened experience of GEORGE JACKSON and SONS in decorations of Drawing and Dining Rooms, Libraries, &c., for private houses, or public buildings, in any of which they have had the honour of executing under Architects of the highest eminence, enables them with confidence to direct notice to that branch of their business.

Upholsterers are invited to inspect the large variety of Glass Frames, Tables, Cornices, Screens, Candelabra, &c. The large extent of their works, and the recent adoption of steam-power and machinery, enable them to deliver every description of work upon materials and specification; while for design, quality, relief, and finish, they flatter themselves they stand unrivalled.

DESIGNS MADE FOR ANY WORKS
PAPIER MACHE AND CARTON PIERRE WORKS, 49, RATHBONE PLACE, LONDON, W.

FIRST-CLASS MEDAL,
EXPOSITION UNIVERSELLE,
1855.

1862.

LITHOGRAPHED DESIGNS OF CEILING FLOWERS, &c. SENT FREE ON APPLICATION.
PATENTEES OF THE CANVAS PLASTER.

Now ready, in roan tuck, gilt edges, price 6s. (postage 4d.),

THE ENGINEER'S, ARCHITECT'S, and CONTRACTOR'S POCKET-BOOK (LOCKWOOD & CO.'S, formerly WEALE'S) for the Year 1863. With Woodcuts and Eight Steel Plates.

"The present publishers deserve great credit for the improvements which have been introduced into 'The Engineer's Pocket-Book' since it came into their hands. The present edition contains several additions and improvements, and a few well-selected scientific and practical papers, and some brief memoirs of the scientific and other men of note recently deceased. The tables for the reciprocal conversion of British measures of length, superficies, capacity, &c. into metric measures, and similar tables for the translation of measures of weight, which have been much wanted, will be found a valuable addition amongst many others introduced in 'The Engineer's Pocket-Book' for this year."—*Artizan.*

"Another edition of this old acquaintance has just been issued, and fully merits the estimation in which it has been held for many years. There is much new matter introduced, and the work has been carefully corrected up to the day of publication. It is one of the most valuable books of its class. We strongly recommend it."—*Civil Engineer and Architect's Journal.*

"Contains an immense variety of useful matter."—*Builder.*
London: LOCKWOOD & CO. 7, Stationers' Hall-court, E.C.

Now ready, beautifully printed in Chromo-Lithography, by Day & Son, Lithographers to the Queen. Size 20 by 29 inches,

A CHART of the HISTORY of ARCHITECTURE: Showing, under the similitude of Streams, the Rise, Chronological Sequence, Relations, and Periods of the various known Styles, of all Countries and Ages; together with its Companion Volume, in post 8vo. entitled, "The Course and Current of Architecture," &c. &c.

By SAMUEL HUGGINS, Architect, author of various Essays on Architecture and Art.

London: DAY & SON, Gate-street, Lincoln's-inn-fields; and JOHN WEALE, 59, High Holborn.

TIME IS MONEY.—All who employ Workmen should send two stamps, and they will receive by return of post a SET of SAMPLES of TIME SHEETS and other useful FORMS, by which men's time is economised and bookkeeping facilitated.—MERRITT & HATCHES, 2, Grocers' Hall-court, Poultry, London, E.C.

TO BUILDERS and OTHERS.—WANTED, a strong light BUILDER'S VAN.—Apply, No. 15, Charlton-place, Islington, N

BRYCESON'S ORGAN FACTORY, BROOK STREET, EUSTON ROAD, LONDON, N.W. Established 1794.—Apply for PRICED CATALOGUE of St. Cecilia, Scotsmore, and other Organs, usually in Stock. Also as to the Tuning, &c of Organs in all parts of the country. Church Organs of any size built, enlarged, or revoiced, as well as removed and WAREHOUSED DURING RESTORATIONS. PRIZE MEDAL, 1851

BOOKCASES in MAHOGANY and WALNUT; Sideboards with Plate-glass Backs, massive Dining Tables, Ladies' Wardrobes, with long Folding Doors and Glass Panels; Inlaid Cabinets and Chiffoniers, Easy Chairs, &c. A variety of new designs of the above articles, and of the best manufacture, on inspection in the extensive Show-rooms of ROBERT FISHER & CO. Cabinet-makers and Upholsterers, 32, Finsbury-place, corner of Finsbury-square.—N.B. Magnificent designs in drawing and dining room carpets, 2s. 9d. and 3s. per yard. Marble-top Washstands, 25s. Walnut Drawing-room Suites, covered in Velvet, 13 Guineas.

A CURIOUSLY-CARVED BLACK OAK MANTEL-PIECE, of ancient workmanship, FOR SALE; also six planks of Maple Wood, and some Veneering.—Will be shown by the Housekeeper at East Temple Chambers, 2, Whitefriars street, Fleet-street.

The Builder.

VOL. XXI.—No. 1075.

French Taste and English.

HE respective characteristics of English and French taste in architecture and decorative art, the fancy and life of invention belonging to the one, and essential attributes of our art not unnoticeable in the other, have repeatedly been pointed to in these pages. Observation in each direction, of the facts referred to, is indeed but one of many aids to progress of every kind, which, we would maintain, would follow from greater perception and appreciation of the merits of each people by the other. The fear sometimes expressed, of losing what are deemed the sterling qualities of the English character, and importing French "trumpery," and vices perhaps, is an exaggerated apprehension. It keeps up the real isolation which is our besetting sin; and ministers to prejudices, if not ignorance, which more than justify the bad odour in which an Englishman on the Continent, finds that his nationality stands: it would limit all progress, commercial, intellectual, and even social and moral; it is inconsistent with the intention of nature, as it is impolitic and illogical. Our valued qualities must be only slightly fused in us, if they can be rubbed off by the contact with others; and we should despise the strength, and suspect the virtue even, of the man who would shut himself in from all sight of that which he ought to feel called upon as a sacred duty, and from the very fact of his superiority, to help to reform. Civilization has ever progressed by the commixture of races: as art, we believe, has progressed by a certain commixture of styles. For, much of the best art has been that of styles which are called *Transitional*. In short, the questions of race now discussed, as in the meetings of the British Association, should possess the utmost interest for the architect; and for that reason, we have noted, in a list in a later portion of this number, the titles of all papers read in Newcastle, pertaining to the subject.

That the French may derive something from English art in its present state, is one of the very points we would advance. We noticed, in a recent leading article, in what way they were arriving at such an impression themselves. But we urge that French art should be looked at in the same spirit as our own, and for a like object of learning something from it. Therefore, when such-and-such merits are pointed to, let it not be said there are such-and-such defects.

A recent visit to Paris, made with the view of considering the nature of French ornament, as it is applied to manufactured articles, has forcibly drawn the attention of one of our correspondents to the subject of this paper.

Remains of the Napoleon festivities still existed in the streets, and Paris was even fuller than usual of provincial and foreign visitors. He writes:—

"The circumstances caused many articles of a temporary character to be employed as adornments to the streets; but whatever is produced with the view of lending enchantment to the fleeting hours of a day, can only be expected to be of a temporary character. indeed, articles required for such a purpose, may advantageously be fleeting, as they are intended to give us charm to present and not future hours. Wreaths, *immortelles*, banners, and other articles of adornment, while of the commonest, may yet be well calculated to contribute to a general gayness."

It is not, however, to this power which the French have of producing a gay effect on a festive occasion with small means, or common materials, that we would now call attention, but to the French method of causing houses and public buildings to appear attractive.

There is a good illustration of this in an hotel which has recently been rebuilt; and upon a description of it we shall base what we have further to say. Although considered a somewhat second-rate house in Paris, the hotel in question would well take a position equal with that of the best kindred establishments in our own country. Not only is the building new, but the furniture is also of recent manufacture, and is uniform throughout the various chief apartments. Upon entering the establishment, it is impossible to evade the impression that everything around is of the most costly character, and that an immense sum of money must have been expended in raising and furnishing such a building.

The entrance from the street consists of a long hall or corridor, of from 20 to 30 feet in breadth, terminating in a broad stone staircase, which continues for about ten steps, and then turns to the left by a square landing. To confine ourselves at present to the lower part of the house, of which we wish especially to speak, at both sides of the hall is a series of pillars, upon which the upper part of the house rests. To the left of the hall, the spaces between the pillars are occupied by pairs of doors with slender framework and large glass panels; and above the doors are glass panels extending to the ceiling. At the right, the hall is treated in a similar manner, only mirrors take the place of transparent glass, and panels of looking-glass replace the doors of the opposite side. Along this right side of the hall, loungers are arranged between the columns, immediately in front of the glass panels, the loungers being of simple and graceful design, consisting of ebony framework, in part polished and in part dead, enriched with simple ormolu beadings and rosettes, and having the stuffed portions covered with bright red morocco. The glass panels at the left are draped with crimson silk curtains. The ceiling of the hall is enriched with ornamental work, and the floor paved with mosaics; while the entire apartment is lighted by many gaslights proceeding from ornamental branches.

To the right of the hall, are certain private offices, and to the left the drawing-room, dining-room, and other apartments. First upon entering the hall, is the drawing-room. Next is the dining-room, about 100 feet in length, and 30 feet in breadth, with a dining-table in the centre, surrounded by about 100 or 120 chairs. The neat design of the black framed chairs, corresponding with the loungers in the hall, and the brilliant red covering of the stuffed portions, are peculiarly attractive. Side-tables of ebony, polished and unpolished, enriched with ormolu, stand at various parts of the room, and a sideboard at each end. The floor, without carpet, is formed of dark wood. The room is lighted by a large lantern, the glass of which is ornamented, yet not coloured. The ceiling is richly ornamented, chiefly with forms in relief, but at either end by coloured decorations. From the ceiling, large glass gaseliers are pendant. The inner and end walls of the room are panelled; some panels are occupied by mirrors, and some by ornamental work. White and gold are prevalent in the decoration. The third room at the left of the hall, is of a similar character: in it, tea is provided. A smoking-room at the end of the hall is similar; but the chairs are covered by a brown leather, on which a small pattern in gold is stamped.

We have said that the effect of all this is pleasing, and that the various apartments have about them an air of magnificence. The simplicity and apparent costliness of the furniture, the elaborate character of the decorations, and the splendour of the gas branches, all contribute to this effect.

We speak now of the general effect produced, and disregard the impression that a detailed inspection might make. Yet, curiously, while the general effect is of a desirable character, a very cursory investigation reveals much that is undesirable.

The building is in that form of the Renaissance architecture which may be regarded as essentially French,—a modification of the style which, while having many noble characters, has also many weaknesses and shortcomings. The decorations are also essentially French. The relief ornaments consist of Louis Quatorze scrollwork, laurel-branches, birds'-nests and birds, and certain husk forms derived from the Romans, which more particularly characterize the period of the Restoration. This ornament is for the most part bad in composition, and weak in design: it is exclusively in white and gold. Some parts are intensely white, as though the quality of the ornament depended upon its immaculate character.

At either end of the dining-hall, we have said there is a compartment of the ceiling bearing a painted decoration. The large central portion of the ceiling of the entire room is occupied by a lantern. In order that the end portions might be in harmony with the central division, they are so painted as to lead the spectator to believe (if he would but do so) that he is standing under an opening in the ceiling, neither protected by roof nor canopied by glass, but having above it nothing but a slightly clouded sky. This curious opening is surrounded by a railing or balustrade, ingeniously yet curiously shown in a somewhat forced perspective. Amidst the railing of the balustrade, flowers are entwined,—nasturtiums, bignonias, convolvuli, and other creepers,—certain sprays of which seemed to hang down into the room through the opening in the ceiling.

The decoration of the hall, and of the other rooms, consists, if we remember rightly, solely of relief ornaments similar to those of the dining-hall, being of the same bad Renaissance style, and in white and gold. The gaseliers are large and imposing, and are in character similar to those shown by the Austrians in the Exhibition of 1862, immediately to the north of the entrance under the western dome. They are largely made up of glass plaques of ornamental shapes,—not the diversified prisms which are in common use with us.

To the furniture, special attention should be directed, as it is both simple and pure in design. Its black and retiring frames, enriched by a simple ormolu bead and a few small ormolu bosses at the square portions of the legs of the chairs (where the legs join the seat), and its brilliant red covering, make it altogether very pleasing.

Upon closely inspecting this furniture, we discover that it is not ebony, as we had imagined, but is merely a common white wood stained and worked into its present form. The red morocco forming the covering to the seats, and to the stuffed portions of the backs, turns out to be American cloth,—the commonest substitute for morocco that has yet been discovered; and every other piece of furniture that we examine is but another specimen of the same character of taste.

This discovery of the true nature of the chairs opens our eyes to the actual state of things. The seeming magnificence tends to check all inquiry into the true nature of the articles before us, for a time. It may often be noticed that, when the general effect of a place is peculiarly pleasing, we forget to search into the true nature of tha

which we behold. We seem instinctively to associate a pleasant aspect with costliness and real worth; hence we do not care to investigate, but take it for granted that whatever is beautiful in general effect, is costly in itself.

Continuing our notice of the hotel,—having once discovered the true nature of those things with which we are surrounded, we make other observations, and thus learn that all before us is as trivial as would be possible in order to the production of the desired effect. Even the glass lustres of the gas branches are cast and not cut; and throughout the whole establishment everything is of the same character.

We should now do well to inquire into the source of the pleasant aspect of the entire building which we have described; and to discover, if possible, how things in themselves paltry, can combine to produce a splendid effect.

First, we may notice that this hotel is a work of architecture, and both in its exterior and interior (at least in its principal apartments), manifests its architectural qualities. We care not how degraded the architectural style; a building that is a work of architecture, is preferable to one that is not; and while an exalted architecture is necessary to the production of a truly noble building, yet any form of architecture is preferable to no form. The presence of a marked style of architecture, even a transitional style, is calculated to give rise to nobleness in the aspect of a building.

Second: concerning the furniture and other adornments, it should be noticed, that while the articles are in themselves second-rate, they are all on the model of first-rate things. It is curious, that with us, common things are almost invariably ugly, and that good things—costly things—alone are beautiful. It is otherwise with French articles. In France, the cheap article and the costly are alike tasteful; and the epithets *good* and *bad* apply only in respect of duration, and not of art; that is, their art, whatever its nature is, is applied with equal skill to the low and high-priced articles.

The furniture of which we speak, while common, is yet of beautiful design, and has that chasteness of effect which we expect only in articles of the higher class. There is no wrong in this, but much that may be commended. If a man can only afford 1*l.* for a chair, there is no reason why it should hence be ugly. A chair of the value of 1*l.* may be beautiful as easily as the chair that is worth 15*l.* Beauty, in the case of the human form, does not confine itself to the rich; and there is no reason why the opulent alone should possess beautiful articles. The truly cultivated artist will see that it is possible to make all things beautiful. The late Professor George Wilson justly said,—"It is astonishing how many people think a thing cannot be beautiful if it is cheap, or comfortable if it is beautiful. They tell you the price of a carpet, as if its cost were the measure of its beauty." And in speaking of the nature of things generally, he inquires—"How does it fare with the majority of our countrymen? They rise in the morning from ugly beds to attire themselves in ugly dresses, to lave their faces in ugly basins, and make their toilets before ugly looking-glasses. They tread hideous carpets till they reach a parlour filled with absurd furniture; and gather round a breakfast-table, where, with the exception of the handsome forms and fair faces of their wives and children, and the graceful outlines of the boiled eggs, which are beyond their power to mar, they see nothing but imperfections, monstrosities, and deformities." These observations of the late Professor are in too many cases applicable. Those articles of furniture which a man in the middle walks of life is compelled to surround himself with, are almost invariably of poor design, if not totally devoid of art qualities: we should do well, then, to copy the French by the production of beautiful, inexpensive furniture.

Another fact to which attention is forcibly called while in Paris, is a mistake which we, as a nation, make in respect of carpets. It is thought in this country, that a room is not furnished unless it be carpeted; and we regard a carpet as dingy and unfit for use when it is not full of bright colours. In the first place, judging from Parisian rooms, it does not seem essential that a floor be carpeted in order that the apartment look furnished, or even magnificent. Neither the dining-room, tea-room, nor smoking-room is carpeted in the hotel of which we have spoken; and whether the drawing-room floor is covered by such a fabric or not, we do not recollect. The deal boards of which our floors are formed, are too light in tone and tint to harmonize with rich colours: hence it is necessary to darken them by a stain, if no carpet is to be used; but thus treated, a floor looks all that could be desired; and with beautiful furniture resting upon it, contributes its full share to the general beauty of the apartment. A small square carpet of subdued colour may be spread under the table, without detracting much from the general effect.

We have illustrations of the darkened floor, in the courts of the Crystal Palace, Sydenham. The boards were found to be too light to harmonize with the decorated walls of the courts; hence they were toned to a harmonizing colour. The effect of the treatment can there be studied: it will be seen to give something of the aspect of the oak floors of the "good old times" of England.

In applying carpets to our floors, we err especially in selecting those with bright colours. A showy carpet detracts much from the aspect of the furniture. Furniture, to look good, must rest on a negative background. A carpet which will set off furniture, will be of tertiary colour and retiring habit. If it force itself into notice, it usurps the place of the furniture, and in proportion to its advancement brings about the recession of the furniture. In the hotel by a description of which we have illustrated this article, there is but one carpet in a public position—that on the stairs. This has a cool grey centre of plain colour, with a band of crimson on each side. There is no pattern; and the carpet is not attractive. But the cool grey harmonizes with the cream-colour of the stone steps on which the carpet rests, and the crimson contrasts pleasingly with both, and marks the boundary of the material. The retiring quality of the carpet is peculiarly pleasant, and adds much to the welcome aspect of the establishment generally. We may learn much from the French, and even what we are too apt to term French trumpery may teach us valuable lessons.

THE CHURCH OF ST. LAWRENCE, WARKWORTH, NORTHUMBERLAND.*

WARKWORTH is not seen correctly unless it is regarded as a link in the chain of ecclesiastical establishments, extending from Lindisfarne to Durham. We know that there was a constant communication kept up between the two houses; we must, therefore, assume that there were certain places on the well-trodden route, at certain distances, which must have been used as stopping places or as stages. Warkworth must have been one of these stages.

Warkworth was granted to the community at Lindisfarne by the Saxon King Ceolwulph, together with the villages of Woodchester (supposed to be now known as Woodhorn), Whittingham, Edlingham, and Eglingham (Symeon). This was the King of Northumbria, "the most glorious Ceolwulph," at whose request the Venerable Bede, wrote his "Ecclesiastical History," and to whom he dedicated it, and to whom he presented it when it was completed, that it might be transcribed. After a short reign of about eight years, he abdicated his throne, and entered the monastery upon Holy Island, where he lived until his death, which did not take place till upwards of twenty years afterwards. It is probable that Saxon churches were built in all these places in his lifetime; for it is on record that Bishop Ecfrid consecrated churches at four of them, and we have architectural evidence at the present day that they were built in two of them, one of them, Warkworth, being that left unmentioned. At Whittingham, part of the Saxon tower is still standing; and in the course of the recent renovations *here*, a length of the foundations of a Saxon church was uncovered in the interior of the nave, a fragment of rough walling, 4 feet thick, as well as a slab of stone, sculptured with a Saxon cross. I have examined Eglingham and Edlingham churches above ground, and saw no traces of Saxon work, but excavations might reveal tokens, as they have in this case. There are ancient churches standing now upon all five places; they are dedicated as follows:—Warkworth to St. Lawrence, Whittingham to St. Bartholomew, Edlingham to John the Baptist, Eglingham to St. Maurice, and Woodhorn to St. Mary.

I wish I could present you with a picture of this Saxon period—so distant,—so long ago; so full of confused figures, conflicts, visions, conversions, miraculous cures, with the lamps of learning and piety burning quietly in the midst. Ceolwulph was the contemporary of four great bishops: Wilfred of York, Peckthelm of Whithorne, Acca of Hexham, and Ethelwald of Lindisfarne. The two last died in the same year that Ceolwulph resigned his crown. This was only fifty years after the death of St. Cuthbert. Bede tells us in his "Ecclesiastical History," which he had concluded before the resignation of Ceolwulph took place, that the beginning and progress of his reign were so filled with commotions that "it cannot yet be known what is to be said concerning them, or what end they will have." After Bede's eyes are closed, and his hand still, another pen takes up the tale and tells us of an eclipse of the sun and another of the moon following year after year, and of a great drought, in 737, leaving the land unfruitful, when "Ceolwulph, voluntarily receiving the tonsure, left the kingdom to Eadbert." The Saxon chronicle gives us but as bare an outline. "A. 731. This year Osric, king of the Northumbrians, was slain, and Ceolwulph succeeded to the kingdom, and held it eight years." And, to the date A. 737: "This year bishop Forthere and Queen Frithsgitha went to Rome. And king Ceolwulph received Peter's tonsure, and gave his kingdom to Eadbert, his uncle's son." His death is recorded against the date A. 760: "and Ceolwulph also died." These sharp, hard outlines, written as though they were burnt in with aqua fortis, we must fill up for ourselves out of such material as we have. Not the least important of these are the remains of Saxon architecture to which I have referred. A Saxon cross, with an interlaced ornamentation, was found at Alnmouth some few years since; and another, of a similar character to that found at Warkworth, among the stones of Lindisfarne priory. These go to show that Saxon work was not all "of wood thatched with weeds," as has been conjectured; but that the green country was dotted with buildings of stone, comparatively small to those since built upon their sites; but not devoid of beauty; being decorated with that pliant, subtle, interlaced ornament we now identify as Saxon.

Warkworth being on the route between Lindisfarne and Durham, was acted upon by the same agencies that affected those buildings. When the funds of the church were abundant, it appeared to have participated in the general prosperity. We may see that, like Lindisfarne, it was rebuilt at the same time that the cathedral was building at Durham. It also shared in the adversity of the mother church. The History of St. Cuthbert states:—"Then Halfdene, King of the Danes, entered the Tyne, and sailed from thence along the coast to Warkworth, laying the whole country waste, and cruelly outraging St. Cuthbert." In later times it shared, to some extent, the fortunes of the castle. When William the Lion invaded Northumberland, he destroyed Warkworth Castle, and pursued the inhabitants of the village into the church and house of the priests, and killed upwards of a hundred men, women, and children. Benedict, abbot of Peterborough, thus relates the circumstance:—

"Et ipse cum parte exercitus quam sibi elegit, intravit villam de Werkeurd et eam combussit, et interfecit in ea omnes quos invenit, viros et mulieres, magnos et parvos: et fecit sate.lites suos frangere ecclesiam Sancti Laurentii, quæ ibi erat, et interficere in ea et in domo clerici ville illius plus quam 100 viros, præter mulieres et parvulos. Proh dolor! tunc audires clamorem muberum, ululatus senum, gemitus morientium, juvenum desperationem."

* A paper read at the meeting of the Architectural and Archæological Society of Durham and Northumberland, on the 7th of August, by Mr. Frederick R. Wilson, architect, Alnwick. It was illustrated by drawings of all the churches in the archdeaconry surveyed by Mr. Wilson; as well as by careful sketches of the fabric, which are to be engraved for the proceedings of the Society, by Mr. Le Keux.

The church in which this outrage was executed was the newly-built Norman edifice. This consisted of a chancel and nave only,—presenting similar details to the structures erected in the same era at Alnmouth, Rock, Rennington, Shilbotell, Bolam, Edlingham, Chillingham, Kyloe, Ancroft, Belford, and Mitford, in this archdeaconry. It possessed a corbel tabling, as Ancroft does to this day: this fact was ascertained in the recent renovations, when two circles of the corbel tabling were found. It is possible that the nave was groined in the same way that we see the chancel was treated, because, if we examine the plan, or the structure, we may see that there are buttresses placed at intervals along the wall of the nave, just as they are placed in the chancel at the points which bear the thrusts of the bays; but of this there is no proof. There is a curious feature of the period to be seen in the north-east angle of the nave: this is the staircase for the ringer of the sanctus bell. The width of the Norman nave was 25 feet 8 inches; the length, 91 feet. The length of the chancel is 32 feet 6 inches; the width, 13 feet 9 inches. The walls were 4 feet thick. The windows are unusually large; those of the same period at Rock and Shilbotell not being above a quarter of the width. With regard to the position of the principal doorway, there is some uncertainty. At Rock there is a west door; at Chillingham, Shilbotell, and Ancroft, the doorways are on the south side. I am inclined to conclude that Warkworth, besides the door on the north, now blocked up, possessed a west door: the shortening of the centre light in the western triplet points to this conclusion; but I am sorry to say no mouldings or any visible signs of Norman work are left to confirm my impression.

It was, probably after this massacre in the reign of Henry II., that the north wall at the west end—perhaps weakened by the thrust of the groining or by the conflagration—was strengthened by the two buttresses still standing; and a tower was thrown out from the west end. This was in the Transitional era, a period of much architectural vitality in this district, the date of the erection of Brinkburne Priory, and the churches of Felton, Framlington, Lesbury, Eglingham, Doddington, Bamborough, Branxton, and Alnham. The west wall of the church, with the window openings in it blocked up, was used as one of the four sides of the tower; and upon this it still stands. It measures, externally, 23 feet square. It is, I think, possible that it was intended as a place of strength, should another inroad of the Scots require the inhabitants to take shelter in the church; for we know it was finished with a flat covering, similar to that of the peel towers. The chronicle of Jordan Fantosme mentions that the castle was then "feible." Edlingham, Eglingham, and Long Houghton have towers of a similar strength. The peel at Ancroft was not thrown out from the church, but absolutely built upon it at the west end. In the Decorated period, when the hermitage lower down the river was built, the church appears to have been put in order, and the spire erected; but no further alterations were made that we can now detect, except the insertion of the curious niche in the angle between the end of the north wall of the aisle and the chancel arch. The chapel at Chibburn and portions of the church at Widdrington are co-eval with this arrangement. The spire is octagonal, built in stone, with louvres at intervals. The broaches are partly concealed externally behind the parapet of the tower; and, internally, they cross the angles, and rest upon flat arches. It is open to the finial from the belfry, without any brace, either of iron or wood.

In the next era of architecture, the Perpendicular period, very extensive alterations were effected as at Alnwick and Hexham. The little Norman church, with its corbel tabling and groined roof, and small round-headed windows, no longer answered the purpose. The roof was taken off, and the south side of the nave taken down. Whether these remained precisely as left by the Norman builders, or whether they had endured any transformations, we are now not likely to learn; but, until the recent renovations, we could perceive exactly what was then done;—the aisle the Perpendicular builders threw out, the clerestory they raised over the arches they placed on the site of the old wall, the low-pitched timber roof they substituted for the former one. Certain armorial devices, here and there, on this work, indicate that the Percies furnished the funds, or liberally contributed to them for this enlargement. The breadth of the aisle is 16 feet 3 inches, a material addition of space.

The porch has the somewhat rare contrivance of a chamber above it, with a winding staircase leading to it, to which access is gained from the exterior of the church. In this particular, it differs from the staircase to the chamber above the church at West Auckland, which is ascended from the interior of the church. At Leverington, in Cambridgeshire, there is a chamber over a porch, which tradition says was a hermitage.

The vestry, which is of late workmanship, possesses a curious window opening, deeply splayed. It consists of three narrow slits, surmounted by a long single light. In the present position of the doorway into this chamber, it is impossible to see the altar from the exterior of the opening, or we could be certain that it was a leper-window; or if we could ascertain that the present position of the doorway was different from the original one, we might come to the same conclusion.

After the enlargement in the Perpendicular era, in the progress of time various repairs were made, all to the disadvantage of the fabric. It was filled with high pen pews: a gallery was placed across the west end; and the walls were whitewashed.

The soil was allowed to accumulate against the walls; and Warkworth Church became damp, close, ill-savoured, and ill-favoured.

There are several documents printed in Hodgson's "History of Northumberland" that relate to Warkworth. Some of them tend to show that it was intimately associated with the fortunes of the see. In one of them Robert, the son of Roger, for the welfare of his soul and that of his wife, bequeaths to God, to the blessed Cuthbert, and the prior and monks of Durham, an annual payment of 20s., chargeable upon his mill at Warkworth, and to be paid on the Feast of St. John the Baptist, to light round about the blessed body of St. Cuthbert. In another, Robert Umfravell is commanded by the king to restore to the prior and convent of Durham the chapel of Mary Magdalene, without the town of Warkworth.

The *Taxatio Ecclesiastica Angliæ et Walliæ*, circa A.D. 1291, quotes Warkworth thus:—

"Werkesworth (Wokwyre) Rector.... £30 0 0
Vicar ejusdem.... £20 0 0"

An Oliverian survey, bearing date "one thousand six hundred and fiftye," states "That the parish of Warkworth is a viccaridge, the late Bishop of Carlisle patron; Mr. Moore, a preaching minister, serveth the cure there and the viccaridge of the yearly value of sixte pounds."

Warkworth is spelt in old writings, besides Wokwyre, mentioned above, Werceworde, Werkewode, Werkeurd, Werkewords, Werkeword, and Werkworth.

Bishop Flambard is recorded to have founded a cell of Benedictine monks at Warkworth, 1257, to which he appropriated the church at Branxton. Traces of a foundation of wall exist 30 yards eastwards from the churchyard wicket (4 feet of the wall existed about a century ago), and traces of buildings are to be found in a neighbouring garden which are not unlikely to be the remains of this establishment; but these I have not examined. In the *Ordinatio Vicariarum de Ellingham, Dalton et Brankeston ex cartuar' ecclesie Dunelm*, there is the following passage:—

"Vicaria vero de Brankyston, in decima lane agnorum, feni molendinorum, ac aliis minutis decimis et Conventionibus ad ipsam ecclesiam spectantibus, nec non quadraginta solidis annuis de decimis garbarum, per manum custodis celle de Werkeworth percipiendis, una cum terra et manso in villa de Brankyston a ipsam ecclesiam pertinentibus, salvo custodi predicte celle, herreo ejusdem mansi, cum situ suo et libero intritu et exitu. Providemus et ordinamus quod predicti vicarii et eorum successores in predictis ecclesijs, canonice instituendi habeant et percipiant omnia supra dicta modo prescripto, eisdemque, proportionibus contenti sint, et omnia onera ordinaria sustineant."

The recent work just completed deserves all praise. There is, however, one wish that every architect will express when he looks upon it;—that is, that the original pitch of the roof had been restored. The corbels are left standing out of the walls that carried the ancient corbel-tabling and roof, and they would still have performed their office well. I, for one, would rather, too, that the ancient priest's door in the chancel had been opened out. With these exceptions, the work has been carried out most felicitously. The abundance of stained glass is a rich and especial feature in the restoration. I would especially draw your attention to three of the windows;—the early triplet at the east end, filled with Passion subjects—the Agony, the Betrayal, the Arraignment, the Mocking, Scourging, Bearing the Cross, &c.; the third pointed window at the west end of the south aisle, representing the Death and Glory of our Lord, with groups of martyrs attendant on the Crucifixion, and of apostles surrounding the Majesty; and the easternmost light on the south side of the south aisle, an Advent window, containing the Annunciation, Nativity, Epiphany, Presentation in the Temple, Flight into Egypt, and Subject to Parents. These masterpieces were designed and executed by Clayton & Bell. They are all memorials;] the first, of the family of Clutterbuck; the second of the family of Smith, of Togston; the third of the late Mr. Joseph Fenwick.

The necessary removal of soil which the indolence of generations had allowed to accumulate, has placed the structure upon a better sanitary footing. Among other discoveries brought about by this imperative but unpleasant task, was that of a stone coffin lying just below the surface in front of the sill of the blocked-up priest's door. There was no lid to it, but it was filled up with soil, and in this lay a skeleton. As those who made the discovery stood by and gazed upon the form, it crumbled to pieces before their sight. Only those who have undertaken the restoration of a church know the anxiety, the labour, the correspondence it involves; the activity, the influences, the energy that must be brought to bear to accomplish the task successfully. The Vicar of Warkworth has so wrought that all things have worked together for good; and we must congratulate him upon the possession of as fit an edifice for the sacred service for which it is designed, as any in this part of the country.

BRITISH ENGRAVERS.

NEW MATERIALS FOR THEIR LIVES.

Valentine Green, A.E.R.A.—In a miscellaneous marine-store kind of lot of pamphlets about art in England, sold many years back by Messrs. Sotheby & Wilkinson, and which it was my good fortune to secure for "a song," I was pleased to find a large-sized quarto, of seventy and odd pages, with this inscription on its original blue cover:—

"To Dr. Johnson,
from the Author."

The quarto was printed in 1782, "for T. Cadell, Bookseller and Printer to the Royal Academy," and the title is as follows:—

"A Review of the Polite Arts in France, at the time of their Establishment under Louis the XIVth, compared with their Present State in England: in which their National Importance and several Pursuits are briefly stated and considered. In a Letter to Sir Joshua Reynolds, P.R.A. and F.R.S. By Valentine Green, Fellow of the Soc^ty^ of Antiq^es^, Mezzotinto Engraver to His Majesty, and to the Elector Palatine; Member of the Royal Academy, London, and Professor of the Electoral Academy, Dusseldorff,"

[with this motto]

"——They order, said I, this matter better in France."
Yorick's Sentimental Journey, vol. i.

This goodly quarto (a large paper copy) had been sent, as in duty bound, by the A.E.R.A. of the Royal Academy of Arts in England to the great lexicographer who filled an honorary professorship in the Academy—one of two professorships in that body dignified by the names of Goldsmith, Sir Walter Scott, Hallam, Grote, Milman, and Macaulay. Poor Mezzotinto-scraper Associate Engraver Green! the presentation copy of your "Review" to the great Samuel Johnson it was my lot to find, sixty-six years after publication, uncut, and therefore—unread. Did the Bolt-court Doctor acknowledge the receipt of Mr. Associate Engraver Green's presentation copy? or did the Mezzotinto-scraper of Newman-street, London, write a letter to our great Bolt-court lexicographer in the vein of the doctor's famous Chesterfield letter of indignation and superiority? Green's printed letter is dated "Newman-street, London, December 23rd, 1782."

Green was born at Hales Owen, near Birmingham, in the year 1739, and died in St. Alban's-street, Haymarket, London, on the 6th of July, 1813, in his seventy-fourth year. To his name on his portraits of Sir Edwin Sandys and others in Nash's "History of Worcester," he appends "Vigornensis." He was justly proud of his native county, and may be more than suspected of preferring the Severn to the Thames.

In what way he took to the noble art of engraving, and under whom he learnt his art, no diligence has, I believe, satisfactorily succeeded in detecting. I have heard that he first became famous through his skill in transferring Sir Joshua's colours to copper; and the little that is known of him confirms the tradition of succeeding engravers. That he was a favourite with Sir Joshua, the pictures he engraved with the approbation of the President, may be readily admitted.

Thus we have from Valentine's graver, and in Sir Joshua's life-time, the fine head of Sir William Chambers the architect, and the noble world-wide famous print of Garrick between Tragedy and Comedy: while in the list of Sir Joshua's seraglio of lovely women, Green has preserved, beyond the reach of fire and Reynolds's fading colours, a Duchess of Rutland, a Duchess of Devonshire, a Countess of Salisbury, a Countess of Aylesford, a Countess of Harrington, and, last and best, that exquisite composition (1781) of the three Waldegrave girls, by far the finest, I have heard skilled engravers say, of all the works of Valentine Green.

The hand of the "mezzotinto engraver to King George III." was not confined to the works of Sir Joshua. Green has given us Romney's fine head of Richard Cumberland, the dramatist, and Gainsborough's full-length of Garrick patronizing the bust of Shakspeare,—fine examples of mezzotinto art.

Nor was his skill wholly restricted to portraits, and the works of Reynolds, Gainsborough, and Romney. He engraved Barry's picture of "Venus Rising from the Sea," and "The Return of Regulus to Carthage," by Benjamin West. The Regulus was published by Alderman Boydell, and is announced in 1773 by its publisher in the following *advertisement* words under his catalogue of "Large Metzotintoes:"—

"*Regulus's Return to Carthage*, by Benjamin West, Esq., in His Majesty's Collection. Engraved by Valentine Green. 25 by 35 in length. Price 2*l.* 2*s.*

N.B. This Print is allowed to be one of the greatest performances ever executed. It contains about 137 figures, all on one Plate; most, or all other Prints, of this size, of consequence, being engraved on two Plates; which makes a disagreeable Line up the middle, and scarce ever joins well together."

A man who engraved with skill and punctuality for Reynolds and West was likely to be soon admitted into the Royal Academy; and, in 1775, Valentine Green was admitted one of the six Associates of that body. His friendships, however, were not confined to the members of the Academy. His portrait, by L. F. Abbot, was No. 431 of the Somerset House Exhibition of the year 1788, and is spoken of in "The Bee, or the Exhibition Exhibited" (a critical review of that day), as "well painted and wonderfully like him." *This* Abbot painted Horatio Lord Nelson and William Cowper, the poet. Where is now Abbot's portrait of Valentine Green? Perhaps Lord Stanhope's Mr. Scharf will kindly tell us.

Green was twice married. His first wife died in 1789, and is buried in Hampstead churchyard, in Middlesex. His second wife (his widow) is remembered by Nollekens, the sculptor, in his will, by a legacy of 100*l.* The last London residence of Green was No. 51, Upper Tichfield-street. Nollekens and the engraver were therefore near neighbours,—and friends, likely, of long standing, for Green calls him in print that "able sculptor, Mr. Nollekens," while, when referring to Bacon, on the very same page, his name is without an epithet of approbation.

It well merits to be told, that Green took an active part in obtaining permission for Barry to decorate the Great Room of the Society of Arts in the Adelphi, and that in his printed work on the Arts already referred to, he claims (p. 52) "the share I myself had in *first* proposing it to that body; a transaction," he continues, "of which the records of the Institution of the year 1774 bear testimony." What do the Society's minutes of 1774 say touching Barry and the history of the decoration of their Great Room? Perhaps Sir Wentworth Dilke will let us know? Barry, single-handed, did nearly a century since better works at the Adelphi, than any *three* artists put together have done in our time in another Barry's New Houses of Parliament.

I shall have "more last words" (and new) about Green when I come to Francis Haward and his memorable engraving of Sir Joshua's "Mrs. Siddons as the Tragic Muse."

PETER CUNNINGHAM.

THE BRITISH ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE.

THE papers read in the sections of the British Association, at the meeting in Newcastle-upon-Tyne, included so many that are interesting to us, and of those so many that extended to great length, that it would be impossible for us to print the half, or the third of them, without trenching upon space that our readers expect to find otherwise appropriated. We may therefore best answer the objects of our publication, by printing a somewhat extended list of the titles of those papers which would appear likely in any degree to interest the different classes of our readers, without precluding ourselves from publishing some of the papers in full, should space permit. We may state that it is acknowledged by the officers of sections, that the proceedings of the Association were never better reported than they have been on this last occasion by the local press. Most of the numbers of the journals containing these reports are already out of print; but the reports of the *Newcastle Chronicle* have, we believe, appeared in a separate form, and may be procured at small cost.

The authors' names are prefixed in each case.

SECTION A.—MECHANICAL AND PHYSICAL SCIENCE. President,—Professor W. J. Macquorn Rankine, C.E., F.R.S.

Hermann Schlagintweit.—On a New Revolving Scale for measuring Curved Lines, communicated by the Abbé Moigno.

A. Claudet.—On some Phenomena produced by the Refractive Power of the Eye.

B. S. Proctor.—On the Focal Adjustment of the Eye.

Dr. Akin.—On the Transmutation of Spectral Rays.

E. J. Lowe.—On Ozone, more especially on Ozone Tests.

H. Swan.—On a new kind of Miniature, possessing apparent solidity by means of a Combination of Prisms.

Professor Plücker.—On Spectral Analysis.

The Abbé Moigno exhibited specimens of telegraphic fac-similes produced by Caselli's method.

Professor Sylvester.—On the Quantity and Centre of Gravity of Figures given in Perspective, or Homography.

S. Alexander.—On the Augmentation of the apparent Diameter of a Body by Atmospheric Refraction.

J. J. Walker.—On the Conditions of the Resolvability of Homogeneous Algebraical Polynomials into Factors.

Professor Rankine.—On the Mathematical Theory of Plane Water Lines.

The Abbé Moigno communicated a paper, by M. Oudry, on Galvanic Copper and its Applications.

The Abbé Moigno exhibited and described M. Soleil's Tenebroscope, for showing the Invisibility of Light.

Professor D. E. Hughes.—On a Printing Telegraph.

W. Cook.—On Bonelli's Printing Telegraph.

W. Ladd exhibited an Acoustic Telegraph.

W. Ladd exhibited an Electro-motive Engine.

C. W. Siemens.—On the Electric Resistance and the Electrification of India-rubber under a pressure of 300 tons.

SECTION B.—CHEMICAL SCIENCE. President,—Professor A. W. Williamson, Ph. D., F.R.S.

Papers on Local Manufactures:—

Glass and Earthenware.

Fire Clay Goods.—By J. Cowen, Blaydon Burn.

Glass.—By R. W. Swinburne, South Shields.

Earthenware.—By C. T. Maling, Newcastle.

J. C. Stevenson, R. C. Clapham, and T. Richardson.—Chemical Manufactures.

J. Pattinson.—On the various kinds of Pyrites used on the Tyne and Neighbourhood for the Manufacture of Sulphuric Acid.

I. L. Bell, T. Sopwith, Dr. Richardson, and T. Spencer. Report on the Metallurgy of the District.

Dr. Riley.—On Titanium in Iron.

J. Pattinson.—On Deposit in Blast Furnaces.

J. Pattinson.—On Zinc, Nickel, and Cobalt in Cleveland Ironstone.

I. L. Bell.—On Aluminium.

Dr. Matthiessen.—Report on the Chemical Nature of Alloys.

W. Baker.—On the Impurities contained in Lead and their Influence on its technical Uses.

W. Crookes.—On Thallium.

I. L. Bell.—On Thallium.

Dr. Stevenson Macadam.—On the Analysis of Chinese Iron.

Dr. Davey.—On the Slaking of Quick-lime.

Dr. Zeuner.—On Impurities in Lead.

L. Kessler.—Sur les Procédés de Gravure du Verre à l'Aide de l'Acide Fluor-hydrique par Impression de la Réserve.

Duncan C. Dallas.—On Photelectric Engraving and Observations upon sundry Processes of Photographic Engraving.

The Abbé Moigno.—Short Communications on Galvanic Copper, Photo-lithography, and Photo-microscopic Specimens.

Dr. T. Wood.—On Oxidation by Ozone.

Dr. Richardson and T. W. Benning.—On the Uses of Fuel in Marine Boilers.

F. A. Abel, F.R.S.—Some Results of Experiments on Lucifer Matches and Others ignited by Friction.

H. B. Condy, F.C.S.—On Disinfectants.

SECTION C.—GEOLOGY. President,—Warington W. Smyth, M.A., F.R.S.

G. B. Forster and John Daglish, F.G.S.—On the Magnesian Limestone of the County of Durham.

Alexander Bryson.—On the Origin of Granite.

Professor Phillips.—On the Deposit of the Gravel, Sand, and Loam, with Flint Implements at St. Acheul.

Professor Phillips.—On the Drift Beds at Mundesley, Norfolk.

R. A. Godwin-Austen.—On the Alluvial Accumulations in the Valleys of the Somme and Ouse.

Professor William King.—On the Neanderthal Skull, or Reasons for believing it to belong to the Clydian Period, and to be specifically distinct from Man.

SECTION D.—ZOOLOGY AND BOTANY. President,—Professor Balfour, M.D., F.R.S.

Rev. H. B. Tristram.—A few Facts on the Variation of Species pointing to Western Asia as the Centre of the Palæarctic Area of Creation.

Thomas Bewley.—Description of a new Plant House, communicated by N. R. Ward, F.R.S.

SUB-SECTION D.—PHYSIOLOGY. President,—Professor Rolleston, M.D., F.R.S.

Stewart Clark.—On the Ventilation of Barracks and other Public Buildings in India.

Dr. White.—On the Means of Passing unharmed through noxious Gases or Vapours.

Dr. G. Robinson.—On the Nature and Varieties of Organic Effluvia.

R. Garner.—On the Reciprocal Action between Plants and Gases.

Dr. Edward Smith.—On the Dietary of the Lancashire Operatives.

Dr. Wilson.—On the Coal Miners of Durham and Northumberland, their Habits and Diseases.

Dr. Edward Smith.—On the Dietaries of the Labouring Classes.

B. W. Richardson.—Miners' Safety Mask for Supporting Life in Fire-damp and other noxious Vapour.

SECTION E.—GEOGRAPHY AND ETHNOLOGY. President, Sir R. I. Murchison, K.C.B., D.C.L.

Capt. Bedford Pim, R.N.—Proposed Inter-Oceanic and International Transit Route across Central America.

J. Crawfurd, F.R.S.—On the Commixture of the Races of Man as affecting the Progress of Civilization in the New World.

Dr. James Hunt (Pres. Anthropological Soc.).—On Anthropological Classification.

J. Crawfurd.—A few Notes on Sir Charles Lyell's "Antiquity of Man."

Dr. James Hunt.—On the Physical and Mental Characters of the Negro.

J. Crawfurd.—On the so-called Celtic Languages in reference to the question of Race.

R. S. Charnock.—On Celtic Languages.

George E. Roberts and Professor Busk.—Note upon the opening of a Cist of the Stone Age near the coast of Moray Frith.

Henry Duckworth.—On the Human Cranium found at Amiens.

William Turner.—On the Anatomical Characters of the Human Cranium found at Amiens.

Lord Lovaine.—On the recent Discovery of Lacustrine Human Habitations in Wigtonshire.

Richard Lee.—The Extinction of Races.

J. Crawfurd.—On the Commixture of the Races of Man as affecting the progress of Civilization in Eastern Asia and the Polynesian Islands.

Rev. G. R. Hall.—On the Aboriginal Occupation of North Tynedale and Western Northumberland. An illustration of the Social Life of the Northumbrian Celts.

J. Crawfurd.—The Origin of Gipsies.

George Petrie.—Antiquities of the Orkneys.

Professor Daniel Wilson.—Notice of the Discovery of three additional Runic Inscriptions in St. Molio's Cave, Holy Island, Argyleshire.

SECTION F.—ECONOMIC SCIENCE AND STATISTICS. President,—Mr. Wm. Tite, M.P.

Dr. Jas. Bird.—On the Vital and Sanitary Statistics of our European Army in India, compared with those of the French Army under like Conditions of Climate and Locality.

Dr. Camps.—On the Sanitary Condition of the Troops in India.

C. H. Bracebridge.—Coventry Freehold Land Society.

Frederick Purdy.—On the Decrease of the Agricultural Population of England, A.D. 1851-61.

Henry Fawcett.—On the Effects of the recent Gold Discoveries.

Frederick Purdy.—On Mortality in Lancashire.

James Heywood.—Remarks on Native Colonial Schools and Hospitals, from the Sanitary Statistics of Miss Florence Nightingale.

The President.—The Statistics connected with the Architectural Improvements in the City of Paris.

John Lamb.—On the Reduction of the Death Rate in Gateshead by Sanitary Measures.

Thomas Webster.—Report of the Committee on Technical and Scientific Evidence in Courts of Law.

[illegible].—On the Origin of the Stockton and Darlington Railway. Communicated by James Potts.

SECTION G.—MECHANICAL SCIENCE. President,—Professor the Rev. R. Willis, M.A.

C. T. Porter.—Richard's Indicator for Steam Engines.

P. Westmacott and J. F. Spencer.—Engineering Manufactures of the Tyne and Neighbouring District.

J. Jameson.—Air Engines.

Robert and William Hawthorn.—New Method of Working Railways by Stationary Engines.

R. A. Peacock.—New Plan for Hanging Dock Gates.

Geo. Fawcus.—A new Method of Constructing Boats, so that any number may be packed one inside the other.

D. Passeley.—On Thompson's Universal Stopper for Bottles, Casks, &c.

C. W. Siemens.—On Regenerative Gas Furnaces as applied to Iron Works.

Messrs. E. Salmon & John Collinson.—Reports and Sections relating to Capt. Bedford Pim's projected Transit Route through Central America, showing the *modus operandi* of surveying in the forests of that country.

D. D. Main.—Newcastle and Gateshead Water Supply.

Admiral Sir E. Belcher.—Description of a Spirit Level Telescope for observing Altitudes and obtaining Latitudes independently of natural or artificial Horizons.

C. B. King.—On Extinguishing Fires.

Dr. White.—On the Prevention of Fouling of Ships' Bottoms.

John Sturgeon.—Self-acting Valve Motion for Steam Hammers.

Professor Airy.—On Boiler Explosions.

J. F. Ure.—On the Improvements now being carried out in the River Tyne.

Samuel Firth.—The Application of Machinery to Coal Cutting.

The Abbé Moigno.—Caselli's Auto-Telegraph from Paris to Marseilles.

The Abbé Moigno.—Oudry's Galvano-copper, and Galvano-copper Paint, applicable to buildings, and armour plates for ships.

Thomas Page.—On Bridge Foundations.

W. Smith.—Harding's Valve and Apparatus for Atmospheric Railway Propulsion.

W. Smith.—James Spence's method of covering Boilers, Pipes, and Cylinders of Steam-Engines for preventing the Radiation of Heat.

W. Smith.—Gray's Portable Machinery or Apparatus for Riveting, Chipping, &c.

C. M. Palmer.—Iron Ship Building on the Tyne and neighbouring districts.

Prof. Rankine.—On the Proportions of Ships of least Skin Resistance for a given Speed and Displacement.

Prof. Rankine.—An Investigation of Plane Water Lines for Ships.

Robert Taylorson.—The Diagonal Principle of Iron Shipbuilding.

Admiral Sir E. Belcher.—On an Improved Caisson Gate.

The Abbé Moigno exhibited and gave Explanations of the "Ventilateur à Réaction" of Mons. Perigault de Rennes, and of the "Balance Aérostatique" of Mons. Seiler.

THE CROYDON SEWAGE IRRIGATION.

I HAVE received so many letters respecting the irrigation fields at Beddington, that a few explanatory remarks will be interesting to your readers. Our irrigation has stood the severe test of several injunctions in Chancery; but we have for nearly two years surmounted all opposition. The water runs clear from our outfall, in which several fine trout have been caught; and the offensive matter, instead of fouling the river, is now manuring the land, and producing luxuriant crops of grass.

In order to shorten this letter, I propose to classify my remarks under different heads.

Firstly.—In what manner can sewage-water be most economically applied to land?

The Croydon method is very simple and inexpensive, being carried out by gravitation.

The water is led into a channel along the highest part of the field: it passes from this channel in streamlets on to the fields at regular distances. Another channel is formed along the lower end of the fields to receive the water after it has irrigated the land. From the lower channel, the partly purified water is conducted in open "carriers" on to the land at the lower end of the farm, where the process is repeated; and it is then carried into the river Wandle.

I need not compare this with the hose and jet system, which must cost at least ten times more than the Croydon system.

Secondly.—What quantity of water will the land and crops take?

This depends on the nature of the land and the quality of the sewage-water. At Rugby, I find that they have used 9,000 tons per acre: at Croydon, we use 18,000 tons per acre. The Rugby sewage is, however, twice the strength of the Croydon sewage.

Thirdly.—To what land and crops can it be applied?

With regard to growing crops, it is, with few exceptions, only applicable to fields of water-grass or Italian rye-grass. The sewage-water has so stimulated the production of the last-named grass, that from 30 tons to 35 tons per acre have been cut at Beddington during the spring, summer, and autumn months, and sold at from 18s. to 25s. per ton.

There is no doubt, if the sewage-water is put on to the arable land two months before the land is prepared for sowing, that it will have the same effect as a dressing of farmyard manure.

Fourthly.—What expense is incurred by the Croydon system of irrigation?

There is the expense of levelling the land, cutting the channels, sluices, &c., which in no case need exceed 3*l.* per acre, provided the position of the water-courses be well selected.

The attendance required is very trifling. One man can turn the water, keep the channels clear, &c., on 100 acres.

The contrast between this and the expense of the hose and jet system is very great. Laying water-pipes, hydrants, hose and jets, pumping the water to get a head, would cost at least 30s. to 40s. per acre per annum; and the labour, if a sufficient quantity of water is put on, would be enormous.

Fifthly.—What is its value as a manure?

This, of course, depends on the strength of the sewage. When asked the question before the Committee on the Sewage of Towns, I declined to answer. From my experience since, I think the Croydon sewage is not worth one farthing per ton; and, according to the report of the commissioners on the Rugby fields, it is not worth there one halfpenny per ton. The exaggerated value put upon the sewage water by some, arises from not allowing for waste and evaporation.

Sixthly.—Can it be easily applied to the outfall of town sewers?

I think that there are few places where the system cannot be applied. It is especially applicable to the inland towns. In every case, by pumping a moderate height, the Croydon irrigation system might be carried out even in cases where no profit would arise from using the hose and jet.

I will conclude by stating, confidently, that if the local Boards were to make the irrigation system a part of their drainage scheme in the first instance, they would make a great profit by it. The Croydon Board have hired their land at the great price of 4*l.* per acre, and let it for a term, at 5*l.* per acre; but the land was taken and let under the pressure of legal proceedings, which circumstance I need not say was a great disadvantage.

JAMES FENTON, Civil Engineer.

DRINKING FOUNTAIN LATELY ERECTED IN BRYANSTON-SQUARE,
In memory of the late William Pitt Byrne, M.A.

THE LATE MR. A. H. MORANT.

ANOTHER of the band of promising young men has passed away. Mr. Augustus Hullock Morant, an Associate of the Institute of British Architects, and the subject of this notice, was one of the younger children of the late Mr. George Morant, known to many of our readers from the interest he took in establishing the "Art-Union of London." Mr. Augustus Morant was articled to his relative, the late Mr. William Adams Nicholson, of Lincoln. He afterwards entered the office of the late Mr. Thomas Cubitt, assisting in the works of Buckingham Palace; and subsequently that of Mr. Joseph Jennings, the district-surveyor for South Marylebone. On Mr. Morant's marriage in 1855, he made a professional tour of some months in France and Italy; and then settled at Southampton, where he erected a school-house; but being called to London by his friends, he was establishing a position, when the much regretted deprivation of sight of his relative, Mr. James M. Lockyer, jun., whose name has often appeared in these pages, led to a partnership in December, 1861, since which period he carried on the works then in course of execution, and designed such others as were required after the new connexion was formed. Among these were the extensive alterations to the premises occupied by Mr. Nicholay, Mr. A. Biddle, and Mr. P. Robinson, in Oxford-street; the mansion erected for Mr. O. Lucas, at Esher; the houses, No. 40, Old Compton-street (corner of Dean-street), and No. 18, Greek-street, Soho; the Portland Hotel, in Great Portland-street; the extensive alterations and farm buildings for Captain R. C. Dent, at Highwood-hill, Hendon; and the terra-cotta portico for Viscount Strangford, at No. 58, Cumberland-street, Bryanston-square, which was exhibited by Mr. Blashfield in the last Architectural Exhibition; besides many works of minor importance. He had set out the works for the additions to Messrs. Heal's premises in Tottenham-court-road, when his health became affected, and after a short illness he breathed his last on the 30th ult., aged thirty-one years. He was buried at Stoke, near Guildford. Those who knew his amiable character and the delight he took in his profession, but were ignorant of his attainments in the higher sciences, concealed by his retiring disposition, could only wonder at the energetic self-reliance and tact with which he solved the problems of a practice in London.

DRINKING FOUNTAIN, BRYANSTON SQUARE.

ERECTED IN MEMORY OF THE LATE WILLIAM PITT BYRNE, M.A.

A TOUCHING memorial of affection, has recently been placed at the south end of Bryanston-square. Its position exactly faces the Marble Arch; the distance from the arch, however, being that of the whole length of Cumberland-place. The work is a drinking-fountain, and a monument of the late Mr. William Pitt Byrne, M.A., a gentleman who, as proprietor of the *Morning Post*, was well known in London circles, and whose qualities procured for him the esteem and regard of many persons of note and eminence. Some of these, after his decease, spontaneously combined to raise a fund for the production, after a design by his widow, of the work of which we publish a representation. We do not give it as a work of art; and those who are acquainted with the principles which we have endeavoured to set forth as to be observed, whether in monuments, or in objects of combined utility and decorative art, will scarcely need to be told that the base of imitated rocks and the carved shell of this fountain, directly representative of nature, and not specially designed for the uses of base or bowl, are unaccordant with those archi-

tectonic principles, that union of formative beauty, expressed stability, and utility, essential to every monument,—be it even, mainly or essentially, sculpturesque, that is, by its *motif*, a work to be entrusted for execution to the hands of the sculptor, rather than to those of the architect and mason. The *Builder*, however, is a newspaper, and must catch the image of the works that rise in streets and squares of the actual London, as well as help onward the march of taste.

This much said, and allusion made to objections that would be preferred to the introducing an urn, and perhaps also to a triangular plan, which last, however common in larger works and in pedestals, always tends to cause the structure, viewed from any point not exactly opposite an angle or the centre of a side, to seem out of perpendicular—we may be allowed to find in the design some merits, and a special interest as the work of a lady, whose tastes and accomplishments, and whose devotion to literature and kindred pursuits, would enable her to become a valuable ally in the attainment of ends which we more especially have at heart. For, the special art of architecture will never minister to the extent it should, to the attractiveness of our English houses and homes, and through these to the affections that should abide there, until the something more than fancy, which is the attribute of that art, shall have been noted and appreciated by those who chiefly form those homes,—the "women of England."

The reasons for the publication of the design in our pages, result from the conspicuous position of the monument in London, the worth and talents of the individual commemorated, and from many of the circumstances which have inspired, and accompanied, the design and completion of the work.

Mr. William Pitt Byrne was the son of Mr. Nicholas Byrne, who was sole manager as well as proprietor of the *Morning Post* during a memorable period, when the popular feeling, to which Mr. Byrne's writing had been opposed, manifested itself in an assault upon the office of the paper. The lives of Mr. Byrne and his son, with those of other inmates of the building, were at that time in peril. Subsequently, there were several attempts on the life of Mr. Nicholas Byrne, until at length, in 1833, a blow was aimed to which he became a victim.

We gather from a printed account, that while sitting alone, writing in his private room at the office, and in the dead of the night, he was suddenly attacked by an armed ruffian, who struck at him and immediately retreated. Defenceless as he was, Mr. Bryne rose and pursued his assailant to the street, as yet unconscious that he was wounded: arrived there, however, he fainted from loss of blood; and the miscreant, favoured by the darkness of the night and the confusion, contrived to escape. Although Mr. Byrne lingered for two years, he continued in a hopeless state, and never afterwards returned to the office.

Mr. William Pitt Byrne was educated and prepared for Cambridge, by Archdeacon Burney. At the time of the last assault on his father, he was a Fellow-Commoner of Trinity College. He was recalled to assume the responsibilities and duties the father had, till then, discharged. He devoted himself to his father during the remainder of the life of the latter, and to the work of the paper, of which, although he was only a youth, he acquitted himself with credit. The interval which elapsed before he could return to the University to complete his terms, disqualified him from going in for the higher honours, which otherwise he would have attained; for, he came out, nevertheless, at the head of the poll.

Mr. Pitt Byrne had lost his mother at a very early age; and in 1835, his brother, Mr. Charles Byrne, was seized with the epidemic then decimating the population. On hearing of a case of cholera, the neighbours and servants, with one exception, fled. With a disregard of self which formed the basis of his character, he refused, even after his brother's death, to leave the scene until the last offices had been performed. Mr. Charles Byrne, cut off at the age of twenty-five, had already given proof of intellect and genius.

On quitting Cambridge, Mr. Pitt Byrne was called to the bar. He never practised, preferring to devote his leisure to the more congenial pursuit of literature. He therefore resumed the management of the *Morning Post*, which in his hands fully maintained its high reputation; but so unassuming was his disposition, that few were aware how entirely the success of the journal depended on his administrative talent, political integrity, and literary abilities. Mr. Pitt Byrne wrote with force, elegance, and ease; and his extensive reading, profound knowledge of ancient and modern languages, love of science, and unusual proficiency in music, enabled him to give enlarged scope to the matter as well as the influence of the paper. In him the votaries of art recognized a liberal and discriminating patron, and, from having been theretofore more exclusively a political journal, the *Morning Post* became, under his auspices, also the oracle of the cultivated and refined circles of society. In 1842, Mr. Pitt Byrne married the second daughter of Mr. Hans Busk, of Great Cumberland-place, to whom he was devotedly attached, and in whom he found a companion of congenial tastes. On withdrawing from his connexion with the paper, he continued his literary occupations by contributing to the leading periodicals. In similar avocations, also, his wife engaged. Some time previous to his decease, having rendered himself master of the Hebrew language, he was engaged in preparing for the press a work of considerable research, being an elaborate translation, with critical notes, of the unintelligible and obscure passages in the Old Testament, especially the Psalms.

The winning truthfulness and attaching simplicity of the character, and the noble disposition, cordial hospitality, practical charity, and genuine piety of Mr. Pitt Byrne, are testified to by his surviving friends.

A monument has been erected over the family grave in St. Mary's Cemetery, Kensal-green, the general form of which resembles the prevailing type of the tombs in the cemeteries of Paris. On a black marble tablet within, is an epitaph written by Cardinal Wiseman. Under the sacred monogram, it reads:—

HIC . IN . PACE . XTI . QVIESCIT
GVILELMVS . PITT . BYRNE . M.A.
DOMO . LONDINO
VIR . INDOLIS . SVAVITATE . MODESTIA

SEMPER . VIVAS . CVM
D E O.

The material of the upper part of the monument in Bryanston-square, is white marble. The rock-work base is red and yellow Mansfield stone. A tablet bearing the arms and an inscription, and the panels of the lamp-pedestals, are of green serpentine. The inscription, which is by Archdeacon Thorp, is as here given:—

Erected by the Friends
of
WILLIAM PITT BYRNE, Esq., M.A.,
After a design by his Widow
In affectionate remembrance
Of the rare combination of estimable qualities
Which in life his modesty concealed,

To
His strict Integrity, political Consistency, noble Disinterestedness,
And uniform Determination
To vindicate the cause of Independent Journalism,
May be ascribed his success
as
Proprietor of the Morning Post,
In maintaining the elevated tone
It had attained under his Father.
His acquirements in classical and general Literature,
His love of Science and Art, his proficiency in Music,
And the countenance by which he promoted their Cultivation,
Were not less attractive than
His singleness of heart, forgiving temper,
generous appreciation of others,
Unobtrusive Piety, and Practical Charity,
Rendering this refreshing Fountain
A suitable Memorial
Of his worth.

THE NATURE AND VARIETIES OF ORGANIC EFFLUVIA.

A PAPER on "Organic Effluvia," read in the Sub-Section D, "Physiology," of the British Association, at the recent meeting, contains some suggestive matter. It is by Dr. G. Robinson, and was read by Mr. Samuelson. After remarking upon the intimate and necessary connexion between natural philosophy, chemistry, and natural history on the one hand, and physiology and pathology on the other, the proof of which connexion, if wanting, would be supplied by the gradual progress of our knowledge of the abnormal constituents of the atmosphere, through which knowledge those noxious influences formerly ascribed to supernatural causes have been traced to operation of the ordinary laws of nature; and upon the necessity for still closer relations than those existing between the cultivators of the natural sciences, and physiologists and pathologists, the paper said,—

A very little reflection will suffice to demonstrate that, under the general term, "organic effluvia," several entirely distinct substances have been confounded; and as it is impossible to entertain any clear ideas of their action as causes of disease, without greater precision in this respect, I am induced to direct attention to the subject. The importance of a clearer classification will be manifest when we consider that our arguments and inquiries respecting epidemic diseases must be materially influenced by the views prevalent as to the composition, properties, and affinities of those peculiar matters present in the atmosphere, which form the basis of such pathological and bygienic researches. In the present state of our knowledge, I am inclined to think that all those abnormal constituents of the atmosphere which are recognized under the general term "organic effluvia," may be resolved into four principal groups, viz.: 1. Gases and the vapours of volatile chemical compounds formed during the decomposition of organic matter. 2. Odoriferous particles *sui generis*. 3. Volatile organic matters not endowed with vitality. 4. Living germs.

1. In the first group, I would place not only the binary gaseous compounds evolved, for instance, during putrefaction, such as the compounds of hydrogen with sulphur, phosphorus, carbon, &c., but also ammonia and its curious combinations with sulphur and phosphorus, described by Dr. Crace Calvert as formed during the decomposition of animal matter. 2. The natural philosophy of odours is so little known that no excuse need be offered for placing in a separate group the volatile particles capable of being detected by the sense of smell, but not demonstrably related to any known gases or vapours. 3. The third class of organic effluvia is one to which I attach great importance from the belief that not only are those volatile organic matters often, perhaps generally, poisonous in themselves, but that they are also injurious to an incalculable extent by sheltering, nourishing, and so propagating the noxious germs liable at all times to be suspended in the atmosphere. And if it can be demonstrated that volatile organic matter is present, under certain circumstances, in the air surrounding us, there is no more difficulty in believing it capable of nourishing and contributing to the growth and development of contiguous germs than in supposing the animalcules present in water to derive their chief support from the animal and vegetable matters dissolved or suspended in it. That organic matter is present in the atmosphere might at once be inferred from the varied odours proceeding from plants and animals, and from the injurious effects exercised on living animals by exposure for a length of time to accumulations of such effluvia. But modern chemistry has converted this probability into a certainty. Vanquelin, on analyzing the liquid obtained by the decomposition of marsh dews, found in the residue an organic substance which blackened or charred on exposure to heat. Zimmerman has described, under the name of "pyrrhine," volatile organic matter universally present in rain and snow water. And more recently Dr. Angus Smith has even determined the relative quantity of the organic constituents of the atmosphere present under different circumstances. This point may, therefore, be considered as definitely settled. 4. The existence of living germs in the atmosphere is proved by the phenomena of what has been erroneously called "Equivocal Generation," such as the appearance of fungi on animal and vegetable substances secluded from everything but the atmosphere, air, &c. The possible dependence of epidemic diseases on the entrance into the blood circulating within the human body of some varieties of these organic germs, is favoured by many analogies and by some direct evidence. For instance, Dr. Robert Dundas Thompson, who examined the air contained in the cholera wards of St. Thomas's Hospital during the epidemic of 1854, states, "that in the atmosphere of a cholera ward, mechanical matters were diffused throughout the air derived from the inmates, that sporules of *fungi*, and germs of *vibriones*, or *vibriones* themselves, were obtained by filtration from the atmosphere." In leaving this subject for the present it may be well to observe that whatever classification of these volatile invisible particles emanating from living or dead animal and vegetable matter

may eventually be adopted, they are doubtless so mixed together as to render their separation in any definite quantity of air very difficult, if at all practicable. For instance, in the effluvia proceeding from a case of small-pox, it could be demonstrated that all the above-described varieties are present. And, in fact, there is every reason to believe that the atmosphere is even more compound than the ocean, containing innumerable substances dissolved or suspended in it, and being constantly affected by, and reacting on, the mass of living organisms with which it is brought in contact.

Mr. Samuelson recommended that for the purpose of ascertaining whether living germs injurious to health are present in the sick wards of hospitals in unusual quantities, a sheet of cotton wool should be purchased from the maker, carefully protected until required, and then stretched across a small hoop, and suspended over the patient's head. The cotton should, after a time, be removed, a part dissolved in ether, and a part washed in distilled water. The distilled water, it had been suggested, should be previously passed through a heated platinum tube. Mr. Samuelson begged that if any results were obtained from this experiment, a little of the cotton charged with germs might be sent to him for examination.

Dr. Smith thought it could not be denied that there were germs of life in the atmosphere, but the fact had been and still was very difficult to ascertain; and what was wanted was not speculation and opinion, but the actual detection of those germs. He did not believe that cholera was produced by their means; that opinion had been disproved.

*** Professor Crace Calvert some years ago, instituted experiments on air collected in the wards of the Manchester Infirmary; and, we believe, then considered that he had found the germs.

THE NAMES OF STREETS IN PARIS.

A REPORT has just been presented to the Prefect of the Seine, by a committee specially appointed, referring to the different terms used to designate the public thoroughfares and open spaces, according to their form, dimensions, situation, or importance. There is certainly great misappropriation of terms, in the Paris nomenclature, as for instance in the use recently, of "Boulevard" to designate such a street as the Boulevard de Sebastopol, which is like the diameter of a circle, and not a circumferential line, as was the boulevard on the site of displaced ramparts. Unfortunately, many of the changes now made are, because they are alterations very confusing. However, it seems to have been resolved to make several very important changes. The use of the word *Square*, which had been adopted from the English, will be discontinued, and "Place" will be in future applied to all open spaces, whether planted as gardens, like the ground before the Arts-et-Métiers and around the tower of Saint Jacques, or left entirely open. The Barrières no longer existing, the word will be abandoned, as also "Route," "Chemin," "Sentier," "Chemin de Ronde," "Allée," and "Chaussée." The name of the "Rue de la Chaussée d'Antin," which is so universally known, caused the committee to hesitate a little before deciding on the suppression of the latter word. The name Chaussée d'Antin being applied not only to a street but also to a whole district, the determination was come to to preserve it for the latter, as an exception, and restore to the street the name of Mont Blanc, which it had previously borne. That street has, in fact, often changed its name, and been successively called Chemin de l'Egout-de-Gaillon, Chemin des Porcherons, Chemin de la Chaussée d'Antin, Rue de l'Hôtel Dieu, Rue de la Chaussée d'Antin, Rue Mirabeau, and Rue du Mont Blanc. The use of the word "boulevard" is also to be circumscribed. That term generally signifies a rampart, and should only be applied to roads which follow the line of the ancient fortifications, or which at least run in a circular direction, and suppose more or less the traces of an old municipal boundary. The wide thoroughfares which traverse the city in an oblique direction, or run from the centre to the circumference, are in reality Avenues. The designation "boulevard," as applied to some of the transversal thoroughfares recently opened in the city of Paris will, however, be retained. The attention of the committee has also been directed to the abuse of certain names in the denomination of the streets or public places,—not less than eighteen bearing the title of Eglise, seven that of De la Mairie, sixteen that of Marie, and the words Notre Dame forming part of the appellations of sixteen others. Such a state of things certainly calls for reform; yet we look with apprehension on the particular reform proposed. Strangers, who have formerly known Paris, will indeed lose every landmark.

PARIS A SEA PORT.

THE *Moniteur de l'Oise* states that all the surveys and soundings for the Paris and Dieppe Canal (recently mentioned by us as in contemplation), have been completed, and that the important question of feeding the canal has been solved. The line proposed by M. Sabattié commences at Gennevilliers, near Courbevoie, in the department of the Seine, where, according to the project, the great mercantile port of Paris is to be established. From Gennevilliers it takes the direction of Ile Adam, skirting the foot of St. Gratien, and, reaching Beaumont, cuts the Oise at Tiverny, passes under Mont Ataire, in the valley of Thérain, and, following the right side of that valley, arrives at Beauvais, where a large basin is to be formed. From Beauvais it enters the valley of the Avelon, by which it enters Gournay: it then follows the valley of the Bray until it arrives opposite the mineral springs of Forges. There it turns to the right into the small valley which receives the waters of those springs, and finds a passage through the not very elevated table-land which blocks up that valley after the rivulet has found an issue below the old abbey of Beaubec. It then meets at Béthune, near St. Saire, and successively arrives at Neuchâtel, Arquis, and Dieppe. At the latter place it sweeps away the fetid slaughter-house, the demolition of which has already been ordered by the city: it skirts the parsonage and infant school of Le Pollet, suppresses the old houses of the Rue de la Lombarderie, cuts off a small corner from the cliffs, and penetrates into the port. Hence it is seen that the point of division of the canal is the plateau lying between Forges and the Abbey of Beaubec. Here, it appears, the ground is 80 mètres (240 feet) above the level of Paris: instead of tunnelling the plateau, a system of locks is proposed, which are to be fed by hydraulic machines; but from what source of reservoir these are to receive their supply has not yet been decided on. The State, it appears, has not been applied to for any subvention or guarantee of interest to the company which undertakes the work.

THE WATER-SUPPLY OF LONDON.

THE last analyses of Dr. R. Dundas Thompson, of the metropolitan waters in August, offer some points of special interest and importance. There was a slight increase upon the organic and total impurity of the preceding month, the most striking examples being illustrated by the Kent and Lambeth companies. Moreover, the Thames water at London Bridge at high water, was highly charged with impurities and sea-water, three experiments having yielded a mean of 232·67 deg. of total, and 26·38 deg. per gallon of organic impurity, while the amount of ammonia from the sewage was ·748 grains per gallon. One of the wells in St. Marylebone contained as much as 2·72 grains ammonia per gallon, an evidence of the large admixture of sewage with which it is contaminated. We give the analysis as in the registrar-general's return:—

	Total Impurity per gallon.	Organic Impurity per gallon.
	Grains or Deg.	Grains or Deg.
Distilled Water	0·0	0·0
Loch Katrine Water, new supply to Glasgow.....	2·35	·605
Manchester Water Supply	3·33	·680
Upper Marylebone-street Well	106·40	7·60
Thames at London Bridge	232·67	26·38
Thames Companies.		
Chelsea.....	17·08	1·40
Southwark	16·40	1·44
West Middlesex	16·72	1·36
Grand Junction	16 64	1·60
Lambeth	17·20	1·72
Other Companies.		
East London	17·52	1·66
New River	16·60	1·20
Kent	26·16	3·68

The table is read thus:—Loch Katrine water contains in the gallon 2·35 degrees or grains of foreign matter in solution, of which ·605 degrees or grains are of vegetable or animal origin.

Great doubts have been expressed, by French authorities as well as by English, of the accuracy, or at least sufficiency of such analyses. What we have no doubt about is, that the supply of London is quite inadequate in quality, as in quantity. What chance is there of a supply from Wales?

SANITARY AND OTHER MATTERS FROM IRELAND.

Dublin.—The sanitary state of this city is exciting attention. The *Irish Farmer's Gazette*, in an article on the subject, says,—None who pass along the quays of Dublin, from King's-bridge downwards, at low-water, can fail to observe the abominable odours which rise from the bed of the river, especially during hot weather; and if the visitor is at all curious in such matters, a walk through some of the back streets, such as Greek-street, Mary's-lane, Bull-lane, and many other crowded parts of the city, will speedily convince him that for pestilential stinks Dublin can vie with any other city in the kingdom. And when a closer examination is made, and courts and crowded tenements are explored, it will then become a matter of wonder how human beings can live from day to day in such localities. The corporation has undoubtedly done much to render the main sewerage of Dublin efficient, but those main sewers are of comparatively little value, from the want of proper drains leading from the houses and back-yards. An eminent medical correspondent of *Saunders's News Letter* has very properly called attention to this matter, stating, that as a consequence of the want of house-drains in many parts of the city, 'the back-yards and premises of houses let in tenements, are in such a condition of filth with human soil, putrid water, and decomposing vegetable and animal matter, that although the sanitary officers of the police and corporation use their best efforts to abate the evil, no sooner have these places been cleaned out than the accumulation again commences, and so disease is extensively produced.' 'I know,' he goes on to state, 'that the deaths occurring from these causes are very numerous, not only from fever, but from scrofulous and other affections.' The corporation has the power to compel the owners of houses to construct house-drains; and we consider, therefore, that immediate steps should be taken to have such carried out, so that the health of the citizens, and those frequenting the city, may be protected. The state of some of the houses let in rooms, where there are no proper house-drains or back premises, is positively dreadful, and a disgrace to a Christian country. It is almost impossible, in fact, to describe these places, under the circumstances mentioned; and the result is that there are three times as many deaths where those 'life destroying influences' are at work than there are 'in those parts of the city where sanitary matters are not neglected.' Were a sanitary commission appointed to visit those parts of the city to which we refer, its report would reveal a tale of horrors of which few have the faintest idea. Yet all this is caused, in a great degree, by the narrow-mindedness of house proprietors, who will not construct proper house-drains and provide suitable conveniences for the use of their tenants; and it is, therefore, absolutely essential that unjustifiable cupidity of this kind shall be met and counteracted by the powers vested in the corporation, for the benefit of all concerned. But if such be the state of certain parts of Dublin, are the provincial towns in a better condition? Are the back lanes and courts of Belfast, Dundalk, Drogheda, Limerick, Cork, Armagh, &c., &c., in such a state of immaculate sweetness as to enable the municipal authorities of these towns to point with scorn at the filthy lanes and fever-producing tenements of Dublin? If not, we trust a spirit will be evoked with reference to this matter, among the inhabitants of these places, which will compel the authorities to take immediate steps for the reformation of the evil.

Belfast.—The water-supply during the past summer in Belfast greatly decreased, and the inhabitants suffered from a scarcity which at length became alarming. The town is supplied from three reservoirs, in which the water, on the 1st of last month, stood at an average of 200 inches below the proper level, and two of them were shortly afterwards completely empty. The supply for manufacturing purposes was stopped, and the inhabitants were obliged to be very economical in the use of the limited quantity available for domestic requirements. A gentleman named Girdwood offered to come to the aid of the authorities by turning the water of his own mill-dam into the town basin for a consideration of 400*l.* per annum; but he could not give any material relief until November, and other millowners threatened legal proceedings if their supply were interfered with. Whether the recent change of weather has to any extent mitigated this serious evil we have not yet heard.——The Belfast Harbour trustees have applied to the Loan Commissioners for a loan of 100,000*l.* for the construction of a floating dock and graving dock.

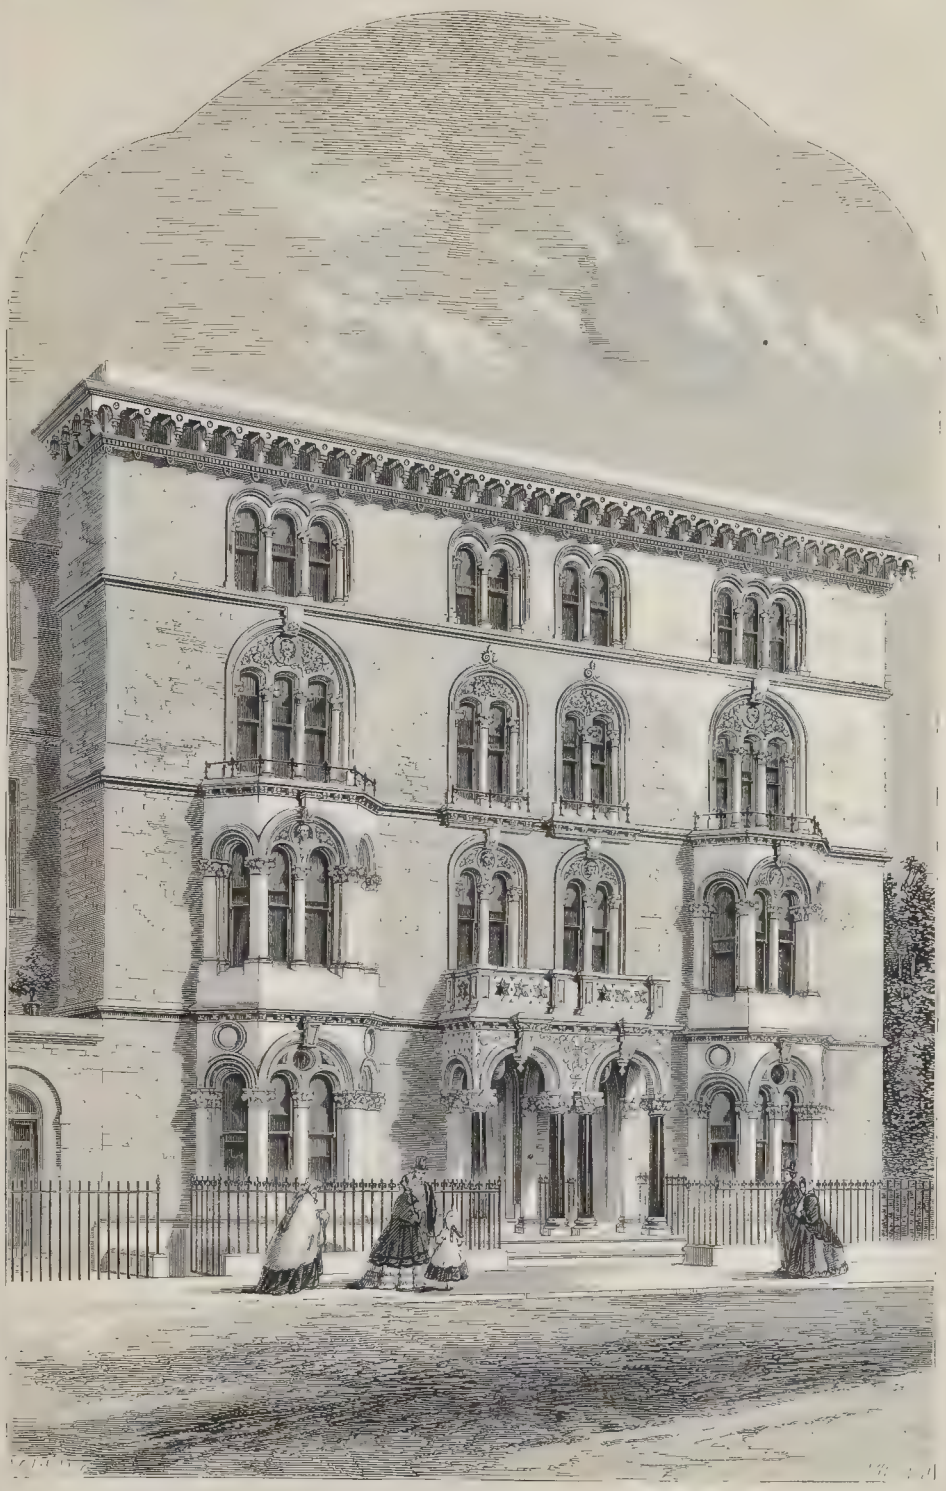
CONGREGATIONAL CHURCH, BARKING, ESSEX.—MR. W. F. POULTON, ARCHITECT.

NEW CONGREGATIONAL CHURCH, BARKING, ESSEX.

THE memorial stone of a new Congregational Church, was laid on the 6th of last month, at Barking. Of this building we give an illustration. The geometrical character of Gothic architecture has been adopted in the design. The materials of construction are Kentish rag-stone in courses, and Bath stone dressings. The plan of the building is 65 feet 9 inches long and 35 feet 4 inches wide in the clear, with apsidal termination to the back, and vestries. Entrance porches, with double sets of doors, are designed for each side of the principal front, that on the staircase side having coupled outer doors. The staircase, leading to the gallery across the front of the chapel, is formed in a semi-octagonal turret annexed to the entrance porch. A four-light traceried window, 25 feet in extreme height, will form the principal feature of the front elevation. The interior of the church is to be ceiled in somewhat of a Gothic outline, so as to obviate the objections so frequently raised, and not wholly without reason, to the ordinary open roofs of churches, as managed. Provision for ventilation is intended to be secured by openings (under control), in the ceiling; and external air will be admitted to the building in various parts of the chapel, in each case to be regulated by valves, &c. On one side of the apse, a vestry is planned for the use of the minister, 10 feet by 11 feet in size; and on the other side it is proposed to erect a vestry 18 feet by 18 feet, for committee meetings and the like. The accommodation will be for 513 persons; namely, 355 adult sittings on the ground-floor, and 158 children in the gallery. The children's seats are to be sufficiently wide to allow of their use by adults when necessary. There will be the power of increasing the accommodation of the chapel at a future time, by the erection of side galleries. The architect is Mr. W. F. Poulton, of Reading, who has erected several chapels of similar character. Mr. Perry, of Hackney, is the contractor. The contract, including lighting and fencing, as well as the vestries, is 1,604*l*. The building occupies a prominent position, being immediately opposite the Townhall.

We give the view as illustrative of certain tendencies in architecture of the day, that we have occasionally had to remark upon, some of which may not be to be regretted, although minor details accompanying this progression would not receive our approval. A "Clerical Reader" of our journal, in writing to us, notices as a curious sign of the times, that we now set apart a place for "Dissenting Church-Building News," and speaks about "simple forms and proportions," and "pruning down of features by wholesale" as "imperative" in churches for the Establishment, and "the only becoming line to adopt against an unseemly rivalry with other sects in the mere matter of the outward garb of our holy religion." Elsewhere in his letter, he remarks upon some of the tendencies we have noticed, in a spirit which should not be adopted by the clergy in any view of their calling and sphere of influence.

Let the clergy of the Established Church help in the solution of the question,—viz., how should churches be planned and built, adapted to the services of the church, and to the requirements of worshippers and congregations; and taste will no longer be confined,—as it is so greatly in the works of our best church-architects,—in the road of precedent, or to an extent greater than even associations and traditions justify. Let the clergy of the Established Church, and their architects, not be above learning from the Dissenting chapels, that churches must be built for their uses; and let all sections of the profession associate somewhat more; and one section return, for what it may derive, some principles, and some results of experience in the treatment of decorative details.



THE LUDGATE HILL VIADUCT.

THE City Commission of Sewers have held a meeting, at which a design of the proposed railway viaduct across Ludgate-hill was submitted for approval, by Messrs. Freshfield & Newman, solicitors to the London, Chatham, and Dover Railway Company, who had engaged to make the structure after a plan to be sanctioned by the Commissioners. The company propose to widen Ludgate-hill to the extent of 16 feet, by setting back the houses that are on the south side of the hill, from about the Old Bailey to Bridge-street. The present width of the hill is 44 feet. It would thenceforward be 60 feet, with a carriage-way 30 feet broad. The proposed viaduct would allow a clear headway of 18 feet for the carriage traffic, and have sides 8 feet high. It would be an iron structure, with a span of 60 feet, and with ornamental brackets at each end, placed against the sides of the abutments, and leaving a headway for foot passengers of about 9 feet. A great deal of surface ornamentation was shown on the sides, giving the appearance at first sight, of an open perforated bridge; but it would in fact have an interior lining to prevent the fall of burning cinders from passing trains. The design, as represented on paper, elicited, according to the newspapers, some expressions of admiration from the commissioners; but their engineer, Mr. Haywood, took occasion to warn them that the thing itself, when put up, would probably fall short of the expectations which the drawing was calculated to produce. They eventually passed a resolution to the effect that they saw no objection to the adoption of the design.

NEW HOUSES, GUY'S HOSPITAL, SOUTHWARK.

THE houses of which we give an illustration, have been recently erected by the governors of Guy's Hospital for the purpose of providing residences for two of their medical staff, who are required to be in almost constant attendance at the hospital, and who have lately been turned out of their former abodes by the operations of the Charing Cross Railway Company near the Southwark end of London Bridge. The principal materials used are red brick with Bath stone dressings. The columns of the portico are of polished granite.

The cost, including fittings, stoves, &c., has been for the two houses about 5,620*l*. Messrs. Newman & Billing, of Tooley-street, were the architects employed by the governors; and the works have been executed by Messrs. J. J. & F. Coleman, of Bermondsey. The carving is by Mr. Seale, of Walworth. The houses can be at present seen, across what was the site of St. Thomas's Hospital, from the raised area in front of the London and Brighton Station. There are in the design, suggestive features that will doubtless be further worked upon.

HOUSES, GUY'S HOSPITAL, SOUTHWARK.—MESSRS. NEWMAN & BILLING, ARCHITECTS.

PRIMEVAL DWELLINGS AND GRAVES IN THE ORKNEYS.

IN the section of Geography and Ethnology of the British Association, at the Newcastle meeting, Mr. George Petrie read a paper on the aboriginal remains in the Orkneys. He said that no district in Scotland possessed so many of these remains. They were found in almost every island, and new discoveries were continually occurring. They frequently appeared as green tumuli of various sizes, and sometimes were unexpectedly met with beneath the surface, and without any external indication of their existence. The ante-Norwegian antiquities of Orkney might be classified as—1st, dwellings and other buildings of primitive architecture; 2nd, the so-called Picts' houses, or Pights-houses; 3rd, barrows or grave-mounds, and ancient graves unconnected with barrows; 4th, miscellaneous antiquities, such as standing stones and cromlechs. The paper gave a general description of the first two of these classes. The dwellings were subterranean chambers or cells, and brochs or circular towers; while the character of the so-called Picts' houses the author believed to be sepulchral; and, if so, they might probably belong to the same race who erected the brochs, and it might be the standing stones also. The author exhibited various ground-plans and sections of the ancient buildings, some of which have been already described in the *Builder*.

THE EFFECT OF FIRE ON CAST-IRON.

ATTENTION has been directed by Dr. Percy, to the fact that several of the cast-iron girders at the German Bazaar, were much bent, and the columns distorted, by the operation of the fire which occurred there some weeks ago. The subject is one of great importance with reference to the use of cast-iron for building purposes. The girders in question were 18 feet long and 13 inches deep in the middle, tapering off slightly towards each end, and flanged, as usual, at the bottom. Of those entire after having fallen to the ground, two were bent laterally in a striking and a nearly equal degree. The flexure was gradual from end to end. The deviation from a straight line at the ends was 22 inches. No cracks could be anywhere detected. Many of the cast-iron columns, which are still upright, Dr. Percy says, have been singularly twisted at the upper part, as though the metal there had been softened by heat, and had yielded without cracking, to the effect of pressure from above. As far as he could judge, there was no very decided evidence of fracture in either girders or columns from the injection of water upon them; and yet, from the fused glass and other objects which lay scattered about, it was certain that they must have been exposed to a pretty high temperature.

We may endorse Dr. Percy's observation, that a museum of objects in illustration of accidents, such as the bursting of boilers, breakage of railway axles and tires, railway collisions, &c., would be as interesting as it would assuredly be important in a practical point of view.

HERNE THE HUNTER'S OAK.

THE venerable and almost classical tree, to which so many pilgrimages have been made, in Windsor Park, has been laid prostrate by the autumn winds. We hear, however, that what remains, is to be preserved in Windsor Castle; but so much anxiety has been shown to appropriate portions of it as it lay in the Home Park, that it has been necessary to place a keeper to watch over it night and day, previous to its removal to a place of security.

We do not like to interfere with long-cherished associations, and seldom do so; but in this instance, it is at least questionable whether the leafless trunk which has just fallen be the identical tree which was known as Herne's Oak in Shakspeare's days (about three hundred years ago). The writer has often had his misgivings on this point; particularly after comparing with it the size of the far-famed Windsor Park oak and others not far away, as well as some of the huge oaks at Hatfield and elsewhere, in connexion with the tradition of Herne the Hunter. There was no doubt a tree called by the name of the sprite who with ragged horns was said to have circled around it; and from Shakspeare's description of the spot, it would be almost heresy to doubt that "*Herne's Oak*" was seen by the eyes of our great poet; but the question for consideration is, was the tree which has just fallen the oak which Shakspeare saw? Towards the end of the last century "Herne's Oak" was marked on the plans of Windsor, about the spot where this tree stood; but we are not aware of the existence of any distinct mark of the position of this same tree at a more early date. It would be very interesting could some reader of the *Builder* give information on the point.

In the dell, close by, there have been found the remains of oaks of very great antiquity, and of far more important size than that which was until lately left; and one of these, which, by its commanding size, attracted to it the story of the weird hunter, may have been the original tree. Three centuries is a long period of time, during which many changes have taken place; and it must be remembered that it was not until about the middle of last century that the knowledge of Shakspeare's plays began to be generally spread among the multitude, and when persons would be likely to search for relics associated with these marvellous works. However this may be, all will regret the fall of "Herne's Oak," if it were only on account of the care which the late Prince Consort took of this relic, which tradition certainly tells us was the identical hollow oak in which the hunter dwelt. A portion of this celebrated tree fell from the trunk upwards of twenty years ago, and has been carefully preserved in the royal stores at Windsor Castle. Since then the tree has been fenced in with park pales, and a plate attached to it, upon which is engraved—

> There is an old tale goes, that Herne the Hunter,
> Sometimes a keeper here in Windsor Forest,
> Doth all the winter-time, at still midnight,
> Walk round about an oak.—*Merry Wives of Windsor.*

Shakspeare, when he wrote the "Merry Wives of Windsor," is said to have lodged at the "Hope Inn," Frogmore, at that time known as "The Bottle on the Moor:" this inn was about 200 yards distant from the tree. Herne is said to have been one of the forest keepers in the earlier part of the reign of Queen Elizabeth; and, having committed some offence that would have occasioned his dismissal from office, he formed the desperate resolution to hang himself upon this tree. Its identity as "Herne's Oak" has been disputed by many writers. In the plan of 1742, already referred to, the position of the oak is clearly defined and marked as Falstaff's oak.

The fairies' dell has been partially filled up; but the late Prince Consort had much of the earth removed, when the oaks, in an upright position, were discovered at the bottom of the dell, which, no doubt, will now be put into a condition to perpetuate the scene of Falstaff's distress and the pranks of the "Merry Wives of Windsor."

LIVERPOOL IMPROVEMENTS.

A GREAT scheme is in hand for new dock works. At a recent meeting of the Dock Board, the special committee on the plans for new works, brought up a recommendation to approve a revised plan of the contemplated alterations in the neighbourhood of the Prince's Basin, &c. The committee had received the resolution of the town council of the 19th inst., to the effect that it was expedient that steps should be promptly taken towards the improvement of the approaches to the landing-stages; and that a plan should be prepared under the direction of a committee of the town council, and the committee of the Dock Board, as a basis for further consideration. The recommendation was referred to the appropriate committee. The committee recommended the board to approve of that portion of the new plan which concerned the construction of the half-tide dock, of west Waterloo Dock, and the Warehouse Dock, and the erection of warehouses on the margin of the latter, the estimated cost being 400,000*l*.

Mr. Brocklebank stated that the cost of building the corn warehouses would be 158,527*l*.

The proceedings of the Improvement Committee before the council last week comprised a recommendation to apply to Parliament in the next session for powers to effect the following improvements—namely, to widen Wellington-road from Thornton-place to Grafton-street, provided the surveyor should fail in making the requisite purchases by private contract; to purchase the reversion in Prince's-park; and to purchase the property required for the improvement of Tithebarn-street, between Oldhall-street and the railway station. After some explanations, the recommendations were agreed to.

The foundation-stone of Woolton-hill reservoir has been laid at Woolton-hill. There is a reservoir now in the course of construction in Dudlow-lane, which receives water from Prescot, and the new reservoir is to have the water pumped up the hill from the one in Dudlow-lane for the especial purpose of supplying the immediate neighbourhood. The land is about an acre in extent, and has been bought by the corporation from the Marquis of Salisbury for the purpose. The contractor is Mr. Samuel Buxton, of Huntslet, near Leeds; and we believe the amount of the contract is between 8,000*l*. and 9,000*l*. The reservoir is to be built in a manner very similar to the other reservoirs. The construction will be under the superintendence of Mr. Duncan, the water engineer.

LOCAL IMPROVEMENTS UNDER THE PUBLIC WORKS ACT.

Manchester.—The General Purposes Committee, at last week's council meeting, recommended the council to empower them to borrow, under the Public Works Act, the sum of 25,000*l*. for a cemetery, and the council have adopted the recommendation. A sum of 30,000*l*. was also agreed to be borrowed for paving, sewering, and other improvements in Ardwick; and 131,283*l*. for additional water-supply and a reservoir at Prestwich. The water-works committee have already expended 1,350,000*l*. upon the water-works, which yield a revenue of 80,000*l*. a year.

Bury.—The provisions of the Act have been explained by Messrs. Rawlinson & Farnall to the Bury Improvement Commissioners, with whom a discussion took place, during which it was stated that 73,000*l*. might be usefully employed for the improvement of the town. Mr. Farrar, the town-surveyor, produced an estimate, showing that about 10,000*l*. would be required for sewering purposes. Ultimately it was decided to adopt the Public Works Act, and a committee was appointed to carry this determination into effect.

Macclesfield.—The local Board of Health have agreed to make application, under the provisions of the Act, for a loan of 42,000*l*. for the completion of the main sewering of the town, the paving and sewering of streets, the construction of the cemetery, an addition to the Town-hall of a post-office, telegraph office, County Court room, &c.; and other local improvements. The guardians have applied for a considerable sum from the same source for laying out and widening roads, erecting new bridges, &c. The local board of Kerridge intended applying for about 1,600*l*. for the carrying out of public improvements in that township.

Oldham.—The town council have decided on adopting the Local Government Act, by which the borough will undergo a thorough sanitary repair. About 100,000*l*. will be spent in sewerage works, paving, and the construction of a park.

MEMORIALS AND MONUMENTS.

A CARVED tomb, to the memory of the late Roman Catholic Bishop Riddell, has just been erected, from the design of Mr. A. M. Dunn, in St. Mary's Roman Catholic Cathedral, Newcastle. It is in the form of an altar tomb. The front is divided into three compartments, by polished granite columns, and the panels are filled with Scriptural subjects,—the centre representing the manner in which the bishop came by his death, in visiting the sick during the fever which raged in Newcastle in 1847. The top is covered with a coped stone, in which a cross is formed of small mosaic tiles: at one end, projecting from a quatre-foil panel, is an excellent portrait of the bishop; and at the other, the head of St. Bead. The carving, which is chiefly executed in Hartlepool limestone, is the work of Mr. Patterson, of Newcastle.

A plain but massive memorial is about to be erected in Hartley Churchyard, over the graves of the sufferers by the Hartley calamity. The names of the 204 men and boys who lost their lives so terribly, will be inscribed on the memorial, with a suitable inscription recording their fate. The work will be executed by Mr. Elliott, of Hartley, from a design by Mr. A. Dunn, of Newcastle, architect.

Two monuments have been erected to the memory of Lord Byron's daughter, Ada, and his grandson, the Viscount Ockham, of whom we had occasion to speak the other day in the *Builder*. The monument to Lady Lovelace is placed in Newstead Abbey, and that to Lord Ockham in the parish church of Ripley, Surrey. Both are Gothic monuments, of white Carrara marble, and are elaborately carved, and surmounted with the arms of the family, the whole having been executed by Mr. T. Gaffin, of London, sculptor. The following are the inscriptions:—"In the Byron vault below lie the remains of Augusta Ada, only daughter of George Gordon Noel, sixth Lord Byron, the wife

of William, Earl of Lovelace: born 10th December, 1815, died 27th November, 1852—R.I.P." "In memory of Byron Noel, Viscount Ockham and Baron Wentworth, eldest son of William, Earl of Lovelace, born 12th May, 1830, died September 1, 1862."

The committee for carrying out the proposal to erect a bronze statue, at Bradford, to the memory of the late Richard Oastler, known for his exertions on behalf of factory children, met recently to inspect models sent in for competition, and have entrusted the commission to Mr. T. Birnie Philip, of London. The memorial will take the form of a group (the figure of Oastler being the centre one), and will cost 1,000*l.*

It is said, that among the arrangements in the will of the late Mr. J. W. Gilbart, of the London and Westminster Bank, is a provision of 3,000*l.*, to meet the necessary expenses of erecting a statue to himself. The request will be carried out in strict accordance with the testator's wishes, and the statue will be placed in Norwood Cemetery.

We hear that Mr. E. G. Papworth is engaged upon a bust of Lord Palmerston, who has given the sculptor the requisite sittings for producing it.

A renovation of John Locke's Monument at the Church of High Laver, near Ongar, Essex, where he lies buried, has been proposed. The church being now in process of restoration, the rector is appealing for subscriptions to repair the philosopher's tomb.

Twenty-six new statues, intended for the façade of the Cathedral of Milan, are now being exhibited in the court of the archbishop's palace of that city. They are executed in Gandoglia marble, and by Milanese sculptors. One-half of these statues, at least, are described as being masterpieces. St. Astero, by Bernasconi, is considered the best.

RAILWAY MATTERS.

THE Kent Coast Railway has been opened to Margate from Herne Bay, giving a direct communication with London. The line was inspected by Captain Rich, Government inspector. The only fault, it is said, which he found with the works was that one or two iron bridges, crossing small streams, were not sufficiently strong. This defect will be speedily remedied, and it is expected that the line will be shortly ready for merchandise traffic.

In the year ending December 31, 1859, the railways of the United Kingdom acquired 25,743,502*l.*, there being 10,002 miles in operation: in 1860 the receipts rose to 27,766,622*l.*, the number of miles at work being advanced to 10,433: in 1861 the earnings further increased to 28,565,355*l.*, the extent of effective lines being 10,865 miles; and in 1862 there was a further expansion to 29,128,558*l.*, produced by 11,551 miles. The progress effected in the last three years amounts to 3,385,056*l.* The working expenses of British railways do not appear to be proportionately reduced, the ratio to the rough receipts last year having been 49 per cent., as compared with 48 per cent. in 1861. Thus, while the profits of 1861 are returned at 14,691,296*l.*, in 1862 they only increased to 14,820,691*l.*

The number of locomotives possessed by English railway companies at the close of 1862 was 5,140; of passenger carriages, 12,584; of other vehicles attached to passenger trains, 4,891; of waggons or trucks used for the conveyance of minerals, live stock, and general merchandise, 153,589; and of other carriages or waggons, 4,270,—making a total of 180,474. At the same date the number of locomotives at work on Scottish railways was 885; of passenger carriages, 1,854; of other vehicles attached to passenger trains, 623; of waggons or trucks used for the conveyance of minerals, live stock, and general merchandise, 27,952; and of other waggons, 188—making a total of 31,503. The railways of Ireland, again, possessed at the same date 373 locomotives, 927 passenger carriages, 423 other vehicles attached to passenger trains, 5,513 waggons or trucks used for the conveyance of minerals, live stock, and general merchandise, and 309 other waggons; making a total of 7,545. We thus arrive at a total for the United Kingdom of 6,393 locomotives (which, at 2,600*l.* each, would represent a capital of 16,631,800*l.*), 14,565 passenger carriages, and 197,758 vans, trucks, &c.,—making a combined general total of 218,716. The value of this immense plant must be estimated at 40,000,000*l.* It may be added that each mile of railway in England possessed last year 22 vehicles of various kinds (including locomotives), while each mile in Scotland had only 18, and in Ireland barely 5. A comparison of this kind affords a valuable means of forming an estimate as to the relative productibility of English, Scotch, and Irish railways.

The average weight of an English goods train, as calculated by Colonel Kennedy from the Board of Trade returns of 1860, is 60 tons; and an average passenger train in England carries seventy passengers in six carriages; whereas a Bombay and Baroda mixed train is composed of seventy-two carriages and trucks, with a gross load of 720 tons, and an average rate of speed of twenty miles an hour. By these means the receipt per train-mile has been raised to upwards of 9s., or more than double the average per train per mile in England, notwithstanding the mean rate of passenger fares per mile of railway bears the proportion of 1·26d. in England, and only 0·24d. on the Bombay and Baroda. Still, with all this, an average receipt per mile of railway of 361*l.* will not cover all reproduction, and the Bombay and Baroda line is not yet paying its expenses. The mileage receipts of the East Indian, 994*l.* last year, and of the Great Indian Peninsula, 368*l.*, although not equal to the average cost of working in England, which is nearly 1,300*l.* per mile per annum, point to the conclusion that when these two colossal undertakings shall be completed from Calcutta to Delhi and Bombay, and from Bombay to Madras, the traffic receipts will greatly increase; and that, after the payment of all working expenses and reproduction, there will be considerable profits for liquidation of the interest guaranteed by the State, and probably also for division among the shareholders in excess of the 5 per cent. guaranteed. Still, fourteen years have elapsed since the Acts of Parliament incorporating these companies passed, and only about three-fifths of the lines have been brought into operation. Possibly, therefore, other five or ten years may be necessary to render them self-supporting.

COMPETITION.

Monaghan and Cavan.—The joint committee appointed to select the best design for the new asylum for the counties of Cavan and Monaghan have, after a lengthened scrutiny, chosen that submitted by Mr. John M'Curdy, of Dublin. There were nineteen competitors from England, Ireland, and Scotland. The asylum will cost about 30,000*l.*

BUILDING NEWS FROM SCOTLAND.

Paisley.—The new Free Middle Church in School Wynd has been opened. It is described as externally, one of the finest ecclesiastical edifices in Paisley, and unquestionably superior in its interior structure and embellishments to any in the town. From its elevated position and its size, the church attracts the eye of the railway traveller as he enters the station, and is seen from all the outskirts of the town, the west excepted. The character of the architecture is that of Early English Gothic, with Continental modifications. From the faulty construction of the roof of the old church, it was gradually giving way, and necessitated considerable fundamental improvements. Advantage was taken of the necessity for reparation to add to the length of the church each way, and increase the number and capacity of the sittings. The form of the building externally, is a parallelogram, with an irregular-sided semi-octagonal apse annexed to the back or north end, roofed in one span, the ridge terminating on the front by a gable, with a stone cross at the apex, and at the back by an iron finial, partly gilded, springing from an apsidal roof. Two centre buttresses on the front gable terminating in octagonal spirelets; four buttresses, with pinnacles at the corners of the building; and five minor buttresses, with pinnacles on either flank, intercepted by a perforated quatrefoil parapet, the parapet being carried round the apse at a higher level, mark the outline characteristics of the edifice. A large five-light window, with pierced tracery in the front gable; a recessed doorway underneath, approached by a flight of steps; and two lancet-headed and traceried windows of the staircases, constitute most of the leading features of the front. The old dank windows have been filled in with mullions and pierced tracery. The apse is lighted by two single-lighted windows at angles, and a treble-lighted one in the centre, with pierced tracery also. The new masonry is banded by red Dumbarton stone. The arrangement internally consists of a front vestibule, with staircases to galleries at either end, with side exit doors. The side and centre galleries are planned in the usual way, but with a square gallery front. The extreme length within the walls is 80 feet, exclusive of the apse; the width 47 feet; and the height to the underside of the ridge 63 feet. The roof is of open timber to the ridge. The couples are of a hammer-beam construction, and spring from stone corbels. The spars of the roof are lined on the underside, giving a free space, which equalizes the temperature in summer and winter. To avoid a sickly monotonous look which large open roofs generally possess if merely stained and varnished, ornamental stencil painting in brilliant colours has been introduced, on the couples and purlins only. The pews are open, stained and varnished, and give accommodation for 1,044 persons, besides about 55 free sittings. The front of the gallery consists of a continuous arcade, broken by clock panels in the centre of the side galleries only. The pillars supporting the gallery have carved capitals, and are bronzed and hatched with gold. The lower part of the apse walls is decorated with an arcade of mosaic work, and gilded imitation grilles. The windows are all glazed with opaque cathedral glass, the borders, tracery, and apse windows excepted, which are of stained glass. The glass in the windows of the apse, and in the tracery of all the other windows, has been obtained by the liberality of four members of the building committee, and is from the establishment of Messrs. Ballantine & Son, of Edinburgh. Three radiated starlights suspended from the roof, and polished brass brackets under the galleries, light the church at night. A vestry and library, with other conveniences, have been erected in the rear of the church; also a large hall, capable of accommodating 250 persons, and lighted from a timber clerestory, supported on trussed beams. The whole woodwork of the hall, library, vestry, &c., is stained and varnished. The cost of the whole works will be about 4,000*l.* The architect is Mr. J. Salmon, of Glasgow. Mr. J. Robertson, builder, Glasgow, executed the mason's work; Mr. M. Blackwood the joiner's work; Mr. C. Wallace, jun., the slater's work; Mr. J. Hutcheson the plasterer's work; Mr. J. Gilmour the plumber's work; Mr. J. Boyd the glazier's work; Messrs. D. Murray & Son the painter's and decorator's work; and Mr. L. Pinkerton the gasfitter's work. Mr. J. Finlay, Glasgow, manufactured and supplied the gas lustres, brackets, standards, &c., and door-handles, all from designs furnished by the architect.

Dunfermline.—Workmen have been employed taking the measurements of the lights of the eastmost window on the north side of the nave of the Abbey preparatory to the erection of a memorial window to Queen Annabella Drummond. The window is immediately above the Gothic tomb of Commendator Pitcairn, which faces the spot on which stood the "rood altar." Lady Willoughby d'Eresby, a descendant of Queen Annabella, has ordered the erection.

Innerleithen.—Two policemen's houses, each of two rooms with attics, are about to be built at Innerleithen, and one of the same size is to be built at West Linton. To each house there is to be a prisoner's cell attached.——Stobo Church, which is several hundred years old, is at present undergoing extensive alterations and repairs. The wall between the church and the chancel has been taken down, and a Gothic arch of fine stone has been erected in its place, to increase the accommodation: a new roof, with arched woodwork inside, has been put up. The interior is to be renewed, the front of the gallery to be placed 3 feet back from its former position. The chancel is to be seated, the seats to be allocated to the lands of Stobo, in consideration of Sir G. Graham Montgomery, who is the principal heritor, bearing the whole expense of the improvements, which amounts to upwards of 700*l.* The architect is Mr. Lessels, of Edinburgh; and the builder Mr. A. Dickson, Peebles.

Oban.—The lunatic asylum for the county at Lochgilphead is now approaching completion. The ground enclosed is fifty acres, situate on an eminence overlooking Lochfyne. The cost of the erection is about 10,000*l.* It has a frontage of 600 feet. A dwelling-house has also been erected for the medical superintendent. The greater part of the works being completed, there are already about seventy inmates in the asylum.——The extension of the pier in Oban Bay is now almost completed, and will prove a great boon to the shipping. About 70 feet have been added to the former pier; and with the extension it is now 213 ft. long and 29 ft. broad. The pier now admits of two steamers lying alongside at the same time. No fewer than 300 cottages are to be erected in the thriving little village of Ballachulish, in connexion with the slate works there. Contracts are in the course of being entered into for the erection of the buildings in the streets.——

Steps are being taken for the erection of a chapel here in connexion with the Episcopal Church.——A new court-house and other buildings are about to be erected in Argyll-square. The plans have been approved by the police commission.

EXHIBITIONS OF PAINTINGS.

The Manchester Royal Institution Exhibition.—The features of this exhibition are much as usual, according to the local *Courier*. The two rooms forming the north wing are well filled, so are the corridor and the vestibule, with contributions which are spoken of, in the aggregate, as unsold works, numbering some 700. In addition to these—the ordinary pictures,—there is in the south wing a collection specially lent by private gentlemen, numbering near upon another hundred works.

The Birmingham Society of Artists' Exhibition.—This exhibition is now open. The local papers speak favourably of it. With only four or five exceptions, all the pictures now on view in New-street have come direct from the painters; and, whether for number or quality, the collection is believed to be fully equal to the exhibition held in any other of the larger provincial towns. The post of honour in the great room is assigned to Mr. Ward's historical picture of "The Ante-Chamber at Whitehall during the dying moments of Charles II."

The Brighton Art Society's Exhibition.—The tenth annual Exhibition of Paintings of the Brighton Art Society has been opened. It occupies the two rooms in the Pavilion devoted to it last year, and fitted up by the town surveyor, Mr. Lockwood, for the purpose. The number of pictures exhibited is 419, of which 224 are in oil, and 175 in water colours. There are also five specimens of statuary. The number of artists who contribute to the exhibition is 156, and of these 30 are country artists.

CHURCH-BUILDING NEWS.

Belton (*Lincolnshire*).—For some months past the church here has been closed, the roofs having been found in a most dangerous condition. New roofs have been placed over the nave and aisles. That over the nave is constructed with moulded tie-beams, principals, carved braces, and embattled cornice, with carved bosses at the intersection of the braces. The aisle roofs are formed with principals and curved braces, the whole springing from moulded stone corbels. All the timbers are visible, and are stained and varnished; being plastered between the rafters. The nave roof is covered with duchess slate, and the aisle with 7lb. lead. The foregoing work rendered necessary repairs to the parapets, windows, &c.; and the clerestory has been re-glazed. Further works are needed. Mr. Whitehead, of Gringley, executed the whole of the works, under Mr. Withers, architect. Mr. Arnaud was clerk of the works.

Long Buckby (*Northants*).—The church here has been re-opened. Previous to the recent alterations, the church much needed the hand of the restorer. At the west end, and at the north and south sides, were large, lumbering galleries, and underneath were high boxes of pews. In addition to this, a Norman arch at the west end was entirely closed up, and another arch in the chancel was partially blocked up. Externally, great barbarisms had been committed, the north and south aisles having been pulled down about ninety years ago, and rebuilt in the style of that day, not the slightest regard being paid to congruity with the character of the original building. The interior of the church has been restored, according to the plans of Mr. Scott. The whole of the galleries and pews have been removed, and open seats, carved, substituted for the pews. The result is that the church will now seat more than it did before. The entire cost of the restoration will be nearly 2,000*l.*; and when the present work in hand is finished, more will remain to be done.

Woolwich.—The new garrison church at Woolwich, ordered to be erected by the late Lord Herbert, when Secretary of State for War, is fast approaching completion, and will be consecrated for Divine service, in October next, by the Bishop of London. The architecture is Byzantine. The building was commenced in February, 1862, under a contract for 14,000*l.*, with 2,000*l.* extras. The organ has been purchased by a general subscription among the officers in the Royal Artillery for the sum of 400*l.* Ten of the stained-glass windows have been fitted in.

Carshalton.—The parish church, which for some time past has been undergoing a state of restoration, has been re-opened. On the 15th of August, 1862, at a parish meeting, it was resolved that the church should be restored, for which purpose subscriptions should be raised, and nearly 1,500*l.* were quickly obtained. It was determined to erect a new portico at the west end of the church; and Mr. Hall, of London, architect, was employed to draw the necessary plans, and Messrs. Dove, Brothers, were the contractors. The new entrance porch is at the west end of the church, and has been thrown back about 10 feet from the original building: on each side there is a staircase leading to the gallery, and in the centre there is a large Gothic window, on one side of which there is a carved head of the Queen, and on the other that of the archbishop, these being intended to represent church and state. The portico is floored with encaustic tiles. The seats are open, and are stained and varnished; the old seats having been remodelled. The communion-table has been removed some distance back, for which purpose the vestry or robing-room has been done away with. The organ, which was formerly in the gallery at the west end, has been removed near the chancel. The work is not yet entirely completed.

Otford (*Kent*).—The parish church is now being restored under the superintendence of Mr. Street, architect. It contains several monuments to the Polhill family, who are descended in the female line from Oliver Cromwell, as is recorded in the inscription upon the monument of David Polhill, on the south side of the church. Upon the north side is the monument of Charles Polhill, which is composed of seven kinds of marble.

Calne (*Wilts*).—The parish church is about to undergo considerable alterations, which will occupy about eight months: they will be principally internal. The present pews are to be removed, and open stalls substituted. The galleries are to be taken down, and all the sittings made free. A stained glass window, given by the late Lord Lansdowne, will be placed at the east end; and many other alterations are to take place, according to a plan by Mr. Slater, of London, architect. The contract is taken by Mr. Penning, of Pewsey, at 2,800*l.*, which sum is already subscribed for. If the whole of the plan be carried out, it is thought a much larger sum will be required.

Worcester.—The work of restoration going on in the interior of the nave of the Cathedral has been so far advanced as to have presented no obstruction to the holding of the Musical Festival in that part of the edifice, and accordingly the orchestra was erected on the customary site, westward of the organ, by Mr. Hemming, builder. The great scaffolding used for scraping the roof and walls was removed, giving an idea of the appearance of the whole interior when the organ and its screen shall have been taken away, and the entire view from east to west left unobstructed. It is not yet decided, according to our authority, the local *Herald*, where the organ shall ultimately be placed, but probably either in one of the transepts or between two piers of the choir. The instrument has been relieved of its temporary casing, and examined and tuned by Mr. Hill, the builder. The paper named, in alluding to the altered character of the Cathedral, as compared with its condition three years ago, says:—"Looking eastward from the west end, the *coup d'œil* is beautiful and solemn. The work of from four to eight centuries is there distinctly marked—diverse yet congruous; all carefully divested of the incrustations which hundreds of years of whitewash and ochre had accumulated; now presenting—here the clean and fresh-looking sandstone, there travertine or Southstone Rock, yonder the dark and shining lines of the Purbeck marble—columns, arches, and vaultings, mouldings and carved capitals, all looking fresh, clean, and sharp, as though it were the creation of but a few years back. The gilded and coloured bosses of the choir have a fine effect, but in the nave the prevailing green colour of the groining immediately surrounding the bosses is not so pleasant to our eye. We know that it is in accordance with ancient examples, but in those days the painting of wall surfaces counteracted the rather *outré* result of such ornamentation of the vaulting." At the west end of the north aisle of the nave an unsightly window has been removed, and the masonry of a new one is on the eve of completion. It is in the Decorated style, and consists of four trefoil-headed lights, with quatrefoils in the tracery. The great north transept new window is likewise of four lights, in the same style, and is one of the chief features of the restoration. The work of refitting the chancel with pavement, stalls, reredos, &c., will commence immediately after the Music Meeting, when Divine service will again be performed in the nave till the final re-opening. The Rev. Richard Cattley, Minor Canon of the Cathedral, proposes to place a first-class clock and peal of bells in the tower, and he asks the public to support him for three principal reasons:—"Firstly, because the clock is really wanted as a standard for all the other time-pieces in the locality; secondly, because the bells will throw their pleasant sounds to a great distance, charming the ear by their special melody with its memory-bringing faculty, and leading up to profitable musing and pleasant thoughts; thirdly, it is intended that the furnishing of the tower of the Cathedral with such appropriate furniture shall take place and be deemed as done in honour of one whom all classes and denominations of people in this county hold in the highest esteem, viz., the Very Reverend the Dean of Worcester."

Ledbury (*Worcestershire*).—The new organ, erected by Mr. Nicholson, of Worcester, in the parish church of Ledbury, has been opened. The organ contains two full manuals and pedal organ. In the great there are open and stop diapasons, dulciana, principal, flute, twelfth, fifteenth, sesquialtra (three rank), and room for trumpet. In the swell there are Bourdon, open and stop diapasons, principal, piccolo, cornopean, and room for viol digamba, flute, mixture (three rank), and oboe. The pedal organ contains open diapason, Bourdon, and room for principal. It has six composition pedals, three to swell and three to great; couplers, great to pedals, swell to pedals, and swell to great, and concave and radiating pedals from C C C to F.

Malvern.—Workmen have been laying the floor of the Priory Church, chancel, and sanctuary with encaustic tiles. The pattern of the tiles has been copied from some ancient ones found in the course of the restorations. The reredos is composed of enamelled tiling, similar in design to some still extant on either side of the communion-table. As regards colours, those of the flooring are green, orange, red, and chocolate, and those of the reredos green, orange, and red. The whole have been furnished by Messrs. Minton & Co., of Stoke-upon-Trent.——The works for the erection of Cowleigh Church are progressing, and it is expected that the building will be ready for consecration in November next. The cost of construction, &c., has been mainly defrayed by voluntary contribution; but a deficiency still exists of about 350*l.*

DISSENTING CHURCH-BUILDING NEWS.

Upton-on-Severn (*Worcestershire*). — The Baptist Chapel in this town is being enlarged and partly re-pewed. When completed it will seat 400. The school-room adjoining is also being enlarged and partly rebuilt. The cost of both will be about 400*l.* The contractor is Mr. E. Taylor, of Worcester.

Naunton (*near Upton-on-Severn*). — A new Baptist Chapel has just been erected and opened in this village, at a cost of 130*l.* It will seat 80. The builder is Mr. E. Taylor, of Worcester.

Llangollen (*North Wales.*)—A new English Wesleyan Chapel has been opened here for divine service. The foundation stone was laid on the 10th April. The chapel is 32 feet by 26 feet inside, and will seat about 150 persons. It is in the Gothic style. The land and the erection of the building cost about 400*l.* As a vestry is wanted, and a wall and iron railings for protection round the property, about 100*l.* may yet be required.

Birmingham.—A new Wesleyan chapel has just been erected and opened in the Shirley-road, Acock's-green. It is in the Gothic style of architecture, with red brick facings and blue brick and stone dressings. The windows are glazed with ground and coloured glass. The inside is fitted up with open stalls and rostrum. The internal dimensions are 45 feet long by 24 feet wide, and 18 feet from floor to ceiling. The chapel will accommodate about 200 persons; and the entire cost, including boundary walls, &c., will be about 500*l.* The architect is Mr. F. D. Johnson, of Bennett's-hill; and the builder, Mr. W. Bennett.

York.—About two years ago, the trustees of the oldest Wesleyan chapel, in New-street, in this city (erected in 1805), determined to remedy the inconvenient arrangement of the interior; and, by the assistance of Mr. E. Taylor, of York, architect, under the direction of a committee, this was done. A large recess was erected behind the pulpit for the organ, which was removed from the gallery, where it had blocked up one of the principal windows: the whole of the pews on the ground floor were re-modelled: a portico was erected in front, and a vestibule made at the entrance: the chapel was warmed with a hot-

water apparatus. During the last month, under the direction of the present stewards, the painting and decoration of the interior has been completed by Mr. Worthington, of this city. On the main ceiling (which is rather low), there is a large centre flower ventilator, with six smaller ones: these have been made use of as the basis of the decoration. Around the centre ventilator are eight panels of azure, bearing gold stars within a broad circle of flat decoration. The stars and the ornament on the styles are on a diminishing scale from the circumference to the centre, giving the whole (without any attempt at relief painting), somewhat of a dome-like appearance. The six smaller ventilators are connected by grey panels and margins of buff and pink, the whole surrounded by a style of very pale green, and finished with various tinted lines. The flowers of the ventilators are white and gold on a subdued red ground. The principal cornice is white and gold, with rosettes at intervals in gold colour. The walls are of a warm cinnamon tint. The circular heads of the windows are surrounded with a Vitruvian scroll, and connected together by a fret, broken at intervals with rosettes. The pillars supporting the gallery are light bronze and gold. The panels on the gallery front are painted in imitation of perforated oak panelling, and the coving below in forms of enriched fluting. The pilasters at the entrance doors are white and bronze, with gold grounds to the ornamental caps, and connected by a decorated facia on gold and red grounds. On the wall above the back seats is carried an imitation of perforated oak panelling on a common ground. The new semi-dome recess, having more architectural character than the older part of the chapel, has afforded the decorator an opportunity for display. The ceiling is azure, with gold stars, the panelled beams white and gold, each panel having an enriched guilloche on a gilded ground, the wall tint being carried up the sides of the beams in a light scroll. The pilasters are enamel white, with the enriched mouldings gilded. The cornice of the recess and the arch are dead white, picked out with gold—the pedestals of the pilasters supporting the arch maroon, relieved with gold, and the plinth black. The organ pipes are decorated in subdued colours on a gold ground. Over the recess is a horizontal window of yellow glass. The chapel has been re-opened.

STAINED GLASS.

All Saints', Derby.—Shortly after the death of the Prince Consort, a proposal was made to introduce a stained glass window into the parish church of All Saints, Derby, which would serve as a local memorial of his Rodal Highness, and be an appropriate decoration of a sacred edifice whose interior is singularly destitute of anything approaching to ornamentation. The proposal was favourably received, and substantial support having been forthcoming, the work was commenced some months ago by Messrs. Clayton & Bell, whose design was selected by the committee. The memorial, according to the local *Advertiser*, is now inserted in the east window. The subject is "The Crucifixion of our Lord," which fills the centre compartment, with "The Baptism by John" and "The Worship of the Magi" on either side. Beneath it is the following inscription:—

"To the glory of God, and in memory of Albert, the Prince Consort, who died December 14, 1861, this window was erected by public subscription, August, 1863."

The cost of the memorial was between 500*l.* and 600*l.* This can only be considered as a first step towards the general improvement of the church.

Snettisham Church (*Norfolk*).—A memorial window has just been erected in Snettisham Church. The window contains three lights, and represents some principal incidents in the Life of King Solomon. It is the second of a series of subjects as arranged for each window in the church. The memorial was designed and executed by Mr. Frederick Preedy.

SCHOOL-BUILDING NEWS.

Clent (*Worcestershire*).—A dinner to the men employed in building the new school in this village was lately given by the patron, and was partaken of by about twenty workmen in the employ of Messrs. Allsopp & Son, of Stourbridge, the contractors for the work. This school is to be endowed by the Durant family, of Clent Hall, and is being erected from a design by Mr. W. J. Allsopp, jun., of Stourbridge. It is in the Gothic style, built of white bricks and stone, with an open roof, stained and varnished.

Tarporley (*Cheshire*).—A school-room has just been erected by the Baptists at Tarporley, capable of holding 120 to 130 scholars, and was opened August 30th.

Manningham (*Yorkshire*).—The new Independent schools at Greenfield, Manningham, the foundation-stone of which was laid early in January last, have been formally opened. The schools are in the Early English style of architecture, and are erected on ground containing an area of 290 square yards, exclusive of the playgrounds, at the east side of Greenfield Chapel, with the style of architecture of which the building corresponds. On the ground-floor there are a meeting-room for members of the congregation, 35 feet by 20 feet; an infants' school-room, 35 feet by 16 feet; three class-rooms, and separate entrance and staircase for boys and girls. The upper story consists of a school-room, 35 feet by 40 feet, and 27 feet 6 inches in height to the apex of the roof timbers, which are of an ornamental character, exposed to view, and stained and varnished. There are four class-rooms, separated from it by means of low partitions, formed at one end of the room. The room is lighted partly from above, but chiefly by four triplet lancet windows, and is heated,—as are also the rooms below,—by a hot-water apparatus. The schools will accommodate 350 children. The cost incurred, including fittings, &c., is about 1,200*l.* The edifice was built from the designs of Messrs. Andrews & Delauny, architects.

PROVINCIAL NEWS.

Ipswich.—The following tenders for the work necessary to carry out the improvement in the Butter Market have been received by Mr. Barnes, the architect for the alterations:—

Gibbons	£2,640	0	0
Luff	2,554	0	0
Pells	2,445	0	0
Morfey	2,380	0	0
Smith	2,333	0	0

The present contract comprises one house in St. Lawrence-lane, a corner shop, and two shops in the Butter Market. The street will be 33 feet wide at the junction with Brook-street. The whole scheme contemplates the removal of the houses on the north side of the Butter Market from St. Lawrence-lane to Brook-street; and, to carry this out, ten new-shops and houses will have to be built.

Northampton.—A new music hall, which has been built from a design by Mr. Thomas, has been opened to the public. The new hall, which stands upon the site formerly occupied by the old building, is capable of accommodating a large number of persons. At one end there is a stage, with wings and drop scenes, and at the other there is a large gallery, the approach to which is from Horse-shoe-lane. The hall is lighted by a number of gas jets suspended from the ceiling, and there are single gas jets, placed at equal distances on the walls. The cost was 400*l.*

South Shields.—The foundation stone of the new Custom-house buildings, South Shields, has been laid by the mayor, in the presence of a numerous assemblage. The building, which is to be of Italian character, will stand completely isolated on the quay, at the Mill Dam, and command an extensive view of the River Tyne, both up and down. The façade next the river will be composed of eight Corinthian columns, coupled, standing upon a rusticated basement of piers and arches, forming an arcade. The four centre columns will be surmounted by a pediment, in which it is intended to place the royal arms. The borough arms are likewise intended to be placed over the centre arch of the arcade. The flank and back elevations are to be of a somewhat plainer character. The main cornice and principal string courses are continued all round with rusticated basement story in keeping with the arcade and moulded quoins at the angles, the whole surmounted by a parapet. The interior will contain accommodation for the customs and shipping business of the town. The shipping-office is on the ground-floor, and comprises shipping-master's office, 20 feet by 16 feet; waiting-room, 20 feet by 15 feet; general shipping-office, 26 feet by 20 feet. The entrance or vestibule to the shipping-office will be paved with Caithness flags. There is also on the ground floor a large bonding warehouse, with other rooms. The first floor will be set apart for the Custom-house, the entrance to which will be by a vestibule 34 feet in length, and paved with tesselated flags. The Custom-house will comprise private office, 20 feet by 17 feet; general office, 23 feet 6 inches by 20 feet; locker's room, 12 feet by 13 feet 6 inches; waiting-room and small office, 20 feet by 13 feet 6 inches. On this floor also will be the Marine Board-room, 25 feet by 20 feet. The cost of the building, it is said, will not exceed 3,000*l.* Mr. Thomas M. Clemence, the borough surveyor, is the architect, under whose superintendence the building is now being carried out by Messrs. Scott & Suddards, of South Shields, builders.

ACCIDENTS.

THERE has been an unusual number of building accidents of late. We have recently had occasion to notice many; and now several more require to be recorded.

At Sydenham, where, as most of our readers know, there is much new building in progress, the fronts of two houses have fallen before they were completed. It appears that one of the bressummers gave way, and the fronts in falling out carried down part of the scaffolding. Five or six men were severely injured, and three were taken to Guy's Hospital.

At Deptford, the Roman Catholic Church in High-street was struck last week by lightning, and the cross carried away; much brickwork in the interior was damaged, and several windows were broken.

At Manchester, two accidents have happened, one at the Victoria station, and the other at the new Fish Market in Victoria-street. At the station, a considerable portion of the roof has been knocked down by the accidental breaking of one of the iron pillars from carelessness in shunting carriages. Such accidents have often occurred. A year or two ago there was one at the same station. At the new Fish Market, in course of erection in Victoria-street, one of the large piles for sustaining the scaffolding and travelling crane gave way, it is said, through insufficient support, and brought down a great part of the heavy timber structure. One man was crushed to death and several other persons were injured. The workmen were fortunately away for their Saturday's half-holiday. In consequence of the sandy soil, the foundation for the new building had to be excavated to a great depth, and this circumstance, added to negligence, seems to have been the cause of the accident. At the inquest, Mr. J. G. Lynde, the city surveyor, said the traversing crane was put up by Messrs. Ellis & Hinchliffe: each upright was set upon a stone flag, at the proper depth from the surface, and on a stiff gravel. He had since found that the flag, on which the upright that had fallen rested, lay partly on gravel and loose soil. He believed that the heavy rain of Thursday and Friday, caused the loose soil to give; and the flag had then slipped. When the crane scaffolding was first erected, it was only intended to alter the front; but he believed, although the whole building had since been taken down, and the foundations excavated below the level of the bottom of the uprights, that they were perfectly safe. He had been in the excavation on the morning of the accident, and did not see the slightest indication of danger. The jury returned a verdict of "Accidental death," coupling with it the remark, "But we think there has not been sufficient precaution taken since the alteration of the plans."

At Liverpool, the inquest on the two men killed by the fall of the arch of the railway bridge in course of erection on the Garston line has resulted in a verdict of accidental death. The jury, however, added that there had been a want of caution on the part of some of the workmen and officials, especially Mr. Arthur Holme, in directing the centres to be struck before the mortar was sufficiently set, and without consulting the resident engineer; and also that the construction of the backing of the arch was not properly done. The coroner said he fully concurred in the verdict: if it had gone further he should have done so also. The evidence of Mr. Rishton, the building surveyor of the borough, was to the effect that in the state of the weather at the time, it was most undoubtedly imprudent and improper to strike the centres within two days after easing them. The remainder of the arch now standing, presented the appearance of very little slackening, if at all: he added, "I examined the mortar: it was quite green and had not set: the mortar ought to have remained a long time to set in such weather. I examined the arch: it consisted of five rings of half-bricks without bond. There was too much mortar by half. I consider the construction very faulty. From what I saw, the arch was not bonded radiately. Such mortar as was used would take a long time to dry. I consider it highly improper

and dangerous to strike the centres of such an arch as this, the spandrils being loaded and the crown of the arch uncovered, considering the state of the mortar and the weather."

At Woodbridge, a well is being constructed in the yard of Mr. Joseph Knight, a manufacturer of Suffolk white bricks. It had been excavated to the depth of about 60 feet; the upper portion, for about 14 feet, being a stiff clay soil, while the remainder was a loose sand. Mr. Charles Dove, of Upford, was the contractor employed; and he and a workman were down in the well, when, to hasten their job, Dove ordered a portion of the brickwork to be removed. This had hardly been effected when the side of the well gave way, and some 30 feet of the sand, with nearly all the brickwork, caved in, completely burying the two men. Means were promptly taken for the recovery of the bodies, but from the tedious nature of the operation they were not removed from the rubbish for a whole day and night.

The Nailsea Glass Works, near Bristol, have been nearly destroyed by fire. Damage was done to the amount of more than 1,000*l.*, which is covered by insurance.

At Carlisle, a new house in Devonshire-street, which was only finished a couple of months since, has gone to wreck. The site had been occupied by a warehouse; and the then existing brick walls were allowed to stand and were built upon for the foundation of the house. A new front, with two large shop windows, was put in and cemented; and, when completed, the building stood three stories high, and extended back to the houses in the Three Crowns-lane. The original side wall on the west was a 15-inch wall, and this was raised several feet, the new brickwork being only 9 inches thick. On this side, the building was unsupported; there being two vacant sites between it and Messrs. Mackie, Davidson, & Gladstone's Bank; but on the other side it was supported by a range of lower buildings extending to the end of the street. From the fact of the house being thus situate, and from its own lofty and narrow construction and the thinness of its walls, says the local *Journal*, it had by no means either an attractive or substantial appearance; but we are assured by the builder, Mr. Bushby, that the walls were sufficiently substantial and durable, and would have remained firm had they not been "molested." A few days prior to the catastrophe, building operations had been commenced on the vacant sites to the west of the house. Two houses were planned, one for the bankers and the other for a joiner; Mr. Walter Wardrop being the contractor. Cellars were to be built; and in order to get foundations for these, considerable excavation had to be made, the earth being removed 4 or 5 feet lower than the foundation of the fallen house.

At the High Church, Paisley, two men have lost their lives, and another, it is feared, has been fatally injured. The church is at present being re-slated; and the men, as is usual, were working upon a scaffold composed of three planks, supported upon needles projecting through the roof immediately above the top of the wall. There were three men and a number of slates upon the scaffold at the west end of the back of the church, when, it is said, another man went upon the same scaffold with a skip, and one of the needles broke, the scaffolding slid down, and three of the men were precipitated head foremost to the ground, from a height of about 32 feet. The fourth man, who was farthest from the place at which the needle gave way, caught hold of the remaining needle, and fortunately escaped without injury.

MASTERS AND MEN IN THE BUILDING TRADE.

A CONFERENCE of workmen is spoken of as in contemplation, for the discussion of certain questions connected with hours of work and rates of pay. Amongst the propositions to be submitted would be:—1. That the mode of working shall be by the hour, at the rate of 7d. per hour, but that ten hours shall be recognised as a working day, and that every hour worked beyond ten should be paid at the rate of time and a half; the hour of leaving off on Saturday to be one o'clock. 2. That nine hours should be considered a working day throughout the week, at the rate of 5s. 6d. per day, with the extra payment for overtime. 3. That ten hours constitute a working day for the first five days of the week, at the rate of 6s. per day, with the extra payment for overtime, leaving off work at twelve o'clock on the Saturday, for which 3s. shall be paid. 4. That overtime be discouraged; but that, where necessary, it shall be paid for time and a half, and that the extra payment be given to men in all branches of the trade. The adoption of either of the above propositions would make the average regular week's wages about 33s. It is also proposed that the resolutions adopted should be submitted to a conference of the employers for their consideration, and that a deputation from the men should attend the conference to explain their objects; the resolutions finally agreed upon to come into operation with the commencement of the ensuing spring season. The men expressly state they desire to take no undue advantage of the present brisk state of the trade, or to interfere with the existing contracts.

Without to any extent thinking that men should not debate upon questions which they may consider affecting their interests, we would urge them to hear and not to attempt to overbear arguments, coming from their own class, or from the well-wishers of their class, deprecating all *cöercion* of their fellow-workmen. The following letter, we may at least say, is well-timed:—

"Last Saturday morning I was somewhat surprised by seeing on the placards of contents of a paper called the *Beehive*, 'A Move in the Building Trade.' Being on a job where there are about fifty hands, and feeling anxious to know what this 'Move' was, I made inquiries, and found that they were as ignorant as myself on the matter. I then laid out twopence for the *Beehive*, and waded through its clippings to no better purpose; but, happening to be in a coffee-house on Monday evening, a friend handed me the *Standard*, pointing out the paragraph containing the prospectus of the above movement. I was still further surprised to find that it was the same movement that entailed so much misery and suffering on us some little time ago. This morning I again made inquiries, and found that the men were perfectly satisfied with the present system of sevenpence per hour and one o'clock on Saturdays; and utterly repudiated and condemned the pretensions of these disturbers and pretended representatives of the trade. They said that it was the clique who received the loaves and fishes in the last affair, that were the instigators of this new movement, thinking that they can again persuade us to become their dupes. But I think, from the temper there displayed, and from what I have seen elsewhere, they will find themselves mistaken. But it will do a great deal of injury to both masters and men, by creating a feeling of distrust and uncertainty; and, to a certain extent, put a check to the prosperous position that the building trade is now in. But, supposing that the movement is sanctioned by a majority of the Union men, I maintain that they do not represent the intelligence or the majority in the trade. This being the case, it behoves us to be up and doing, before we, by our silence, become as it were participators, and are again involved in the misery resulting from our neglect. Knowing your limited space, I will not trespass on it further, hoping you will think this worthy of inserting, as it may be the means of setting on foot a movement which will counteract the pernicious effects of the above movement.

It may be said that I am an anonymous writer; but it is not that I am ashamed or afraid that my name should be known. Did I let it be known, it would at once be said that I had some sinister motive in view, or was a cringing sycophant, when my object is the protection of myself with the great body of workmen that take the same views of this question.

A BUILDING OPERATIVE."*

THE COSTLINESS OF ARBITRATION: THE LIVERPOOL CASE.

MR. THOMAS WYLIE, of Liverpool, whose name was mentioned in Mr. Holme's speech, a report of which was copied in our article of the 22nd ult., is anxious that we should publish, in "justification" of his "professional conduct," a copy of a report which he has lately addressed to the Finance Committee of the Select Vestry of the Parish of Liverpool, on the subject of Mr. Holme's impeachment. We really think Mr. Wylie does not require the use of three or four columns of our journal, to justify himself with those who are most concerned with whatever may have been his small share in the case which we reported, and to some extent commented upon. We give, however, from his letter all that seems important. Mr. Wylie says:—

"Your extract is not the same as the report which appeared in the *Liverpool Daily Courier*, (Mr. Holme's favourite paper),† as in your transcript I am made to say 'that the shop would be let for 275*l.*, in part from having a connexion with it;' whereas the version of the *Daily Courier* is, 'I had no doubt it would let for 275*l.*, perhaps not apart from a connexion,' which was what I did say. The business being as much that of an outfitter as a pawnbroker, will explain why this discrepancy is pointed out, as, in my opinion, it would let for this business, but not for a public-house.

Mr. Holme was not quite correct in stating that two arbitrations had taken place on that day and the day before in St. George's Hall, each having finished during the day,—as these were cases decided before the sheriff's deputy and a special jury.

As one of your constant readers, I attach generally great importance to your remarks when they have direct reference to the interests of the profession; and I agree with the observation that to cheapen arbitration is what architects and surveyors should strenuously endeavour to accomplish.

The employment of counsel, and a great array of witnesses, with attorneys and shorthand writers, soon swells the costs in arbitration to an enormous extent, and if persisted in will very soon render intermediate assize for *Nisi Prius* as necessary as the additional criminal assize; because suitors will rather elect to have trial by jury, with all 'the glorious uncertainty of law,' than adopt the good old plan of leaving their differences to be settled by three honest men, if such extraordinary expenses are to be incurred.—THOMAS WYLIE."

* We have, of course, the name of the writer.—ED.

† The report, sent to us by one whom we can trust, was, we believe, from the *Liverpool Daily Post*.—ED.

Books Received.

Subtle Brains and Lissom Fingers. By ANDREW WYNTER, M.D. London: Hardwicke, 1863.

THE author of "Our Social Bees," and other popular literature, has here been induced by his publisher to collect into a volume, some of those "chisel-marks of our industrial and scientific progress" which he had previously inscribed on the pages of *Once a Week* and the *London Review*, and which many readers will remember to have read under such titles as—"The Buried Roman City in Britain," "Dining-rooms for the Working Classes," "Silvertown," "Railways and City Population," "The English in Paris," "The New Hotel System," "The Restoration of Our Soil," "The Under-Sea Railroad," "Half-hours at the Kensington Museum," "Physical Education," "Air Traction," "Village Hospitals," "The Working-men's Flower-show," "Messages under the Sea," "Town Telegraphs," "Excursion Trains," "Early Warnings," &c. The whole now forms a handsome and interesting volume, well worthy even of a reperusal by those who have already read the several papers desultorily in the weekly mediums where they made their first appearance.

We cannot allow a popular volume like this to pass under our notice, however, with a mere reminder of its contents, and without a special word on those "Early Warnings" with which the volume closes. The "early warnings" relate to those incipient symptoms of insanity which too reckless a use of "subtle brains," in this fast era of the world, but too often excites. Many of the warnings here alluded to ought to be well heeded,—though not, we should say, watched; for to be perpetually on the outlook for symptoms of insanity is to prepare the way for and to precipitate the very evil which is dreaded. There are warnings, however, which cannot be despised or neglected with impunity; and of these some account is given in the paper under more especial notice. At the same time we cannot point attention to such sources of uneasiness without protesting against the alarmist and quackish use which has heretofore been made of many alleged tokens of coming insanity. Attention to such tokens may be very beneficial to mad-doctors; but we very much doubt the benefit to the alleged "patients." Even in Dr. Wynter's excellent paper on this his own especial subject, there are indications of undue importance being given to the merest trifles, to heed which in all cases—and hence in any case,—without other and corroborative evidence, must be most pernicious and most destructive to the peace and comfort of families. For example,—are we to regard such trifling, or even habitual, slips in speech and "laughable blunders" as,—"Everybody feels very languid this *wet* weather—I mean this *hot* weather;" or "Come, who will sit down to supper? Here is cold meat and *pudding*—I mean *pie*,"—as tokens, in all or any case, of an impending "attack of brain disease," merely because a gentleman, previous to such an attack, made such slips of the tongue? The legitimate inference (correct enough, probably, in this particular instance, as it so happened) is, that had the friends of this gentleman at once consulted a mad-doctor, and got his head shaved and blistered, he would have had no "attack of brain disease." But only think to what such inferences, acted on as a rule, in just such cases, must lead in private life, were people really so insane, or such fools at least, as mad-doctors would seem to wish to make them! The writer of these remarks knows a sensible lady who for five-and-twenty years has been in the daily habit of committing just such blunders, only far more absurd and laughable ones than these: *e.g.*, the other day, having desired a servant to put on a large fire, with a pot of water to boil, and having forgotten all about it, till the coal was burnt out and the water boiled away, she suddenly exclaimed to her sister, on seeing it, "Would you believe it! all these coals have boiled away!" Now, had the friends of this lady consulted a mad-doctor when first she began to manifest in speech such ridiculous conglomerations of ideas, and got her head shaved and blistered; doubtless having no subsequent "attack of brain disease," the mad-doctor would have

got the credit of saving his "patient" from the dreadful infliction of insanity; but at what a cost of future peace and happiness, both to her and to her friends, and of peril to sanity itself!—at least, till they learned, by further experience, to laugh at their own folly in giving any heed whatever to such a croaking and worthless omen of evil.

VARIORUM.

Three Prize Essays on Physical Education: Athletic Society: Olympic Festival, June, 1863. Longman & Co. There are here three prize essays on this important subject,—one by Mr. Luke Owen Pike, M.A.; one by Lord William Lennox; and one by Mr. Rowland Evans. Although we are not advocates of "Muscular Christianity," seeing that towards the "wrestling" and the "good fight" of true religion "bodily exercise profiteth little," as the apostolic striver with spiritual powers informs us; nevertheless, the influence of bodily exercise in producing not only a healthy body but a vigorous and healthy mind, no one can dispute, notwithstanding that there are too many instances, we believe, of serious evils from overdoing this "physical education," or, at least, this "bodily exercise."——Chambers's Handy Guide to the Kent and Sussex Coast. W. & R. Chambers, London and Edinburgh, 1863. In the plan of this really handy and useful guide there are six routes or districts, with their head-quarters, or centres, in Gravesend, Rochester, Margate, Dover, Hastings, and Brighton; and every part of the coast, for a distance of 200 miles, is described—from Erith, in Kent, to Bognor, in Sussex. This includes, of course, all the chief watering-places and other interesting spots on the south-east coast, from the Thames to the borders of Hampshire. There are also suggestions for railway trips into the interior, and an appendix of information useful to tourists and excursionists. The whole is illustrated with a convenient and good clue map, and numerous wood-engravings. ——The current *Edinburgh* (Longman & Co.) contains an appreciative, though not entirely commendatory, review of Mr. Fergusson's "History of the Modern Styles of Architecture." The objection mainly dwelt on is to his partiality.

Miscellanea.

THE LATE MR. BUTLER.—We regret to have to announce the sudden death, on Monday morning last, of Mr. William Butler, a gentleman well known to many in the architectural world as an excellent perspective draughtsman, while he also possessed a practical knowledge of architecture. He was a pupil of Mr. C. J. Richardson, and was connected with Mr. Sydney Smirke, who employed him while engaged upon the Conservative Club, and other buildings at the west end of the town. For a long term of years also he has drawn on stone, and assisted in the production of the architectural lithographs that have issued from the establishment of Messrs. Day & Son. His loss, at the early age of forty-three, will be deeply felt by his widow and large family, and a wide circle of friends.

INJURY TO THE NEW ALBION OUTFALL AT BRIGHTON.—The works going on at the Junction-parade for the new outfall, have been subjected to a severe ordeal, according to the local *Herald*, from gales of wind and very high tides, and from the heavy floods of storm-water. At the Albion outfall the water rushed forth in a torrent, which made a clear way through the beach, and threatened to sweep away the strong frame of timber-work which has been erected there for the works in progress. The mouth of the northern drain has been damaged more or less, almost as far back as the point of its junction with the St. James's-street sewer—about 50 feet. This mishap did not stop the outflow of the water; but the drain could not carry off all the streams poured into it by the public gratings and from private houses drained into it. The consequence was that, as in former instances, the basements of many houses were inundated; the pavements of their kitchens, cellars, or yards were blown up; and a flood of slush poured into them to the depth, in some instances, of 3 or 4 feet. Immediate steps must be taken for the reconstruction of the northern drain, which is quite unequal to the work it is now called on to do. It is, besides, in a most dilapidated state. The progress of the new outfall has not been stopped, though obstructed by these occurrences. The new work has stood the test well; and 132 feet of piping have been laid down, reaching some distance into the sea.

THE "NORWICH GATES."—The manufacturers of these well-known gates, Messrs. Barnard, Bishop, & Barnards, have received an order for somewhat similar gates, for the Pasha of Egypt. The details, it is said, will be exceedingly rich and elaborate.

ST. PAUL'S CATHEDRAL. — We mentioned in our last, that Dr. Rogers was in treaty with the Dean and Chapter, for contributing a painted window. We understand he has since had allotted to him the upper central window of the apse. The design proposed (our Lord's Ascension) is by Professor Schnorr, of Dresden. The preliminary sketch is said to promise a good result; but some months will elapse ere its completion, as designs for two other windows in the apse, previously engaged, must first be furnished, and some work for the King of Bavaria completed.

WEIGHTS AND MEASURES.—A committee of Section F of the British Association for the Advancement of Science, adopting a suggestion of the President (Sir W. Armstrong) contained in his address, have passed the following resolution with respect to the decimal system of weights and measures:—That a committee be appointed to ask for an interview with Lord Palmerston and Sir George Grey, to impress upon them the importance of the introduction into the United Kingdom of a decimal system of weights and measures with reference to the interests of science; and that the following gentlemen be the committee to represent the Section of Economic Science, with power to add to their number:—The president (Mr. W. Tite, M.P.), Col. Sykes, M.P., Sir John Hay, M.P., the Right Hon. C. B. Adderley, M.P., with Mr. F. Purdy as their secretary.

PROGRESS OF POST-OFFICE SAVINGS BANKS.—It appears from the last year's Report of the Postmaster-General, that the progress of the Post-office Savings Banks, which were begun nearly two years ago, is highly satisfactory. Many new banks were opened, and there are now nearly 3,000 of them in the United Kingdom. On the 1st of last January, the deposits in them, including interest, amounted to nearly 3,000,000*l*. In each division of the United Kingdom the Post-office Banks have obtained a larger proportion of small depositors than the old banks have been able to attract. This circumstance is attributed mainly to the greater facilities which the Post-office Banks afford,—especially to the fact that they are open daily and for several hours—and partly to the fact that the Post-office Banks have been extended freely to small villages and comparatively poor districts, which had hitherto been unprovided with savings-bank accommodation.

UNWHOLESOME FOOD. — Mr. Simon's annual report to the Privy Council, as its medical officer, on matters relating to the public health, has just been issued; and among the subjects with which it deals, is that of the consumption of the flesh of animals slaughtered while in a state of disease. Mr. Gamgee, Principal and Professor of the Edinburgh new Veterinary College, was requested last year to investigate this subject. He reports that disease prevails very extensively in the United Kingdom among cattle, sheep, and swine; that in very many instances the diseased state of an animal leads the owner to have it immediately slaughtered for consumption as human food; and that, in fact, as much as a fifth of the meat of the country comes from animals considerably diseased! As regards meat infested with parasites, our animal food is for the most part, says Mr. Simon, exposed to so high a temperature before it is eaten, that any parasites which had their home in it are killed; but it is probable that they may outlive the processes by which meat is commonly cured, and may thus get swallowed alive by persons who eat uncooked sausage, ham, or bacon; and we know that meat infested with parasites may become a source of human disease. Mr. Gamgee is confident that there are between 40,000 and 50,000 measly pigs in Ireland, most of which come to Great Britain for consumption; and his impression is that for every measly pig in the kingdom, there is at least one human being with tapeworms! At a convict establishment where diseased cattle are eaten in large quantities, and especially cattle afflicted with lung disease, as many as forty and fifty cases a month of boils and carbuncles occur among 1,500 convicts. From a subsequent report by Dr. Letheby, the medical officer of health for the city of London, it appears that within the last six weeks only, 43,523 lbs. of meat (or upwards of 19 tons) had been condemned in the markets and slaughter-houses; and that of this, 1,377 lbs. were from diseased animals, the remainder being putrid.

ELASTICITY OF STEEL.—Can any of your readers inform me how to calculate the increasing thickness towards the centre, of a steel bow, necessary to make it bend in a *true* circle? The principle is shown, to some extent, in the bow used in archery.—M. M. C.

THE STENCH OF PETROLEUM.—An odd way, remarks a contemporary, has been taken of convincing the authorities of Liverpool and the sanitary officer, Dr. Stench [an odd misprint for Trench], that the smell of petroleum, when warehoused in the town, was disagreeable to the inhabitants. Some gentlemen bought two casks of petroleum, and hired a cart to go through the principal streets, the casks having been perforated to let the fluid drip out and scent the town.

GAS.—It is proposed to erect gasworks for Great Bardfield, at a cost of 1,000*l*.; and a limited company is being formed for the purpose. ——The Portland Gasworks are progressing under the superintendence of the engineer, Mr. John H. Little, of Newcastle-upon-Tyne.——The Portsea Island Gas Company have declared a dividend of 8 per cent. per annum, free of income tax, and the balance, carried to the contingent fund, after the lapse of two years only, amounts to about 2,000*l*. On works and extensions 30,000*l*., raised in shares, have been expended under a late Act of Parliament.——A meeting has been held at Machynlleth, at which it has been resolved to erect gasworks for the town. A company, with a capital of about 2,000*l*., in 5*l*. shares, is being established.

PHOTOGRAPHIC PROGRESS. — The latest discovery in portraiture, is as an invention styled by the patentee, the "Casket of Crystal tube Miniature," by which a solid image of the head is, by a new development of the photographic art, seen looking with a strange living reality from out the centre of a small cube of crystal, every feature standing out in as perfect relief as though chiselled by the hands of fairy sculptors. An account of this discovery was given at the Newcastle meeting of the British Association, from which it appears that the cube alluded to consists of two prisms conjoined, and that the portrait is produced from two, and is thus of the nature of a stereograph, displayed permanently in a crystal stereoscope.

THE NEW STREET FROM BLACKFRIARS TO THE MANSION HOUSE.—The inhabitants of the Ward of Cheap are urging the widening of the thoroughfare at the east end of the Poultry, in anticipation of the projected new street from Blackfriars to the Mansion House. The old banking premises of Sir John Lubbock & Co., at the north-east corner of the Poultry, have recently been pulled down, to make way for a more commodious structure; and it is urged upon the Commissioners of Sewers of the City, that the opportunity should not be lost of setting back the new building some 25 or 30 feet, and buying so much of the ground from the banking firm, with the view to the eventual widening of the Poultry at the point of junction with the new street. The commissioners, convinced of the necessity for the suggested improvement, have invited the Metropolitan Board of Works to join them in the cost.

SANITARY CONDITION OF OUR TOWNS.—The Registrar-General, it appears, has considered it his duty to call the attention of the Privy Council to the prevalence, lately noticed by us, of fever at Whitehaven; and in consequence, the Privy Council have asked for particulars, and especially for a "report upon the sanitary state of those portions of the town where the fever prevails." Meantime the dormant "Harbour Trustees," who are the local authorities, are beginning to turn uneasily in their sleep, symptomatic of a forthcoming wakening up. They have just resolved in committee *not* to move for the application of the Local Government Act to the town, but to thrust some sanitary provisions into a new Water Bill for which they propose to apply to Parliament next Session. It is to be hoped they will shortly feel the sharp steel pen of the Privy Council gently thrust into some sensitive part of the "body corporate."——At Keswick, there have been ten new cases of smallpox in one week, most of them spreading directly along the course of a bad drain leading from a shocking nuisance in Cape's-court, where a fatal case of malignant smallpox had previously occurred. All the sewers have now been cleansed with Condy's disinfecting fluid; and the removal of solid filth is nearly completed.——The sanitary state of Rotherham is exciting some uneasiness in the Local Board of Health, as it well may in so dry a season in a town so short of water as Rotherham is in any season.

GOETHE'S HOUSE.—The Emperor of Austria has presented 1,000 florins towards the fund for the restoration of Goethe's House, in Frankfort, so called from having been the residence of the great poet.

TENDERS.

For pulling down old buildings, and erecting range of warehouses and stables, King-street, Compton-street, Clerkenwell, for Messrs. Davenes, Brothers. Mr. T. W. Constantine, architect. Quantities not supplied :—

Newman & Mann	£2,535	0	0
Sands	2,510	0	0
Sawyer	2,482	0	0
Nash	1,948	0	0
Sargeant	1,947	0	0
Lambell	1,527	0	0

For taking down and rebuilding No. 9, Beckford-row, Walworth, for the Rev. J. C. Clark. Mr. R. Parriss, architect. Quantities supplied :—

Stevens	£740	0	0
Perry	670	0	0
Rimma	637	0	0
Shelton	608	10	0
Lathey, Brothers	603	0	0
Daws	599	0	0
Hale	598	0	0
McPherson	595	0	0
Cubitt	595	0	0

For the erection of a cottage at Wantage, for Mr. W. D. Wasborough. Mr. Edwin Dalby, architect:—

Aldworth & Partridge	£289	10	0
Kent & Sons	230	0	0
Nash (accepted)	160	0	0

For works in alteration and additions to house No. 18, Acton-street, Gray's-inn-road :—

Langmead	£485	0	0
Morley	465	0	0
Emery	431	0	0
Gillatt	270	0	0

For the new Strand Hotel. Mr. Francis H. Fowler, architect. Quantities supplied by Mr. James G. Smither and Mr. William Harris :

Thorn, Brothers (accepted)	£83,000	0	0

For the erection of a villa for Mr. Isaac Shawe, Wrexham. Mr. M. Gummew, architect. Quantities not supplied :—

Pritchard	£1,700	0	0

For building a dwelling-house at Parndon Mill, Essex, for Capt. Slack. Mr. Wm. Wilds, architect. Quantities supplied by the architect :—

Green	£706	0	0
Hitch	700	0	0

For pulling down and rebuilding the Water-mill, Lemsford, Herts, for Lady Palmerston. Mr. Wm. Wilds, architect :

Raves	£973	0	0*
Bloom & Chalkley	970	0	0
Lawrence	963	0	0
Wells	957	0	0
Kent	920	0	0
Young	915	0	0

Ironfounder's and Millwright's Work.

Bloom & Chalkley	£313	0	0

* And the old materials.

For the erection of a villa residence at Bickley, Kent, for Mr. G. Hastings. Mr. H. H. Collins, architect. Quantities supplied :—

Myers	£2,039	0	0
Fish	2,030	0	0
Ring & Sons	2,483	0	0
Newman & Mann	2,383	0	0

For repairs at Houndsditch. Mr. H. H. Collins, architect :—

Wright	£150	0	0
Hurren & Sons	140	0	0
Cohen	110	0	0

For repairs, &c., at Westminster Jews' Free School, Greek-street, Soho. Mr. H. H. Collins, architect :—

Elmes	£174	13	0
Haines	167	15	0
Cohen	151	17	0

For the first portion of a new mission-house at Rock Ferry, for the Rev. Charles Jolibet. Mr. E Welby Pugin, architect. Quantities supplied by Mr. Samuel Marples :—

Simpson & Malone	£3,729	0	0
Roberts & Robinson	3,697	0	0
Smith & Son	3,300	0	0
Baynes	3,300	0	0
Farrell	3,297	0	0
Hogarth	3,250	0	0
Watkins	3,050	0	0
Glaister	3,040	0	0

For finishing three pairs of houses, Thornton Heath, near Croydon. Mr. R. J. Woodcock, architect :—

Hall	£2,290	0	0
Ring	2,249	0	0
Martin	1,860	0	0
King, Burton, & Co.	1,750	0	0
Mason	1,666	0	0
Adams & Co.	1,660	0	0
Humphries & Co.	1,373	0	0

For the erection of new warehouse buildings, Bermondsey New-road, S.E., for Mr. William Stockil. Mr. George Elkington, architect. Quantities supplied by Mr. B. A. C. Farring :—

Conder	£5,164	0	0
Little	4,492	0	0
Capps	4,485	0	0
Hack & Son	4,347	0	0
Wood & Munn	4,329	0	0
Wills	4,299	0	0
Coleman	4,220	0	0
Wells (accepted)	4,200	0	0

We are compelled to decline pointing out books and giving addresses.

All statements of facts, lists of tenders, &c., must be accompanied by the name and address of the sender; not necessarily for publication.

ADVERTISEMENTS.

The Publisher cannot be responsible for ORIGINAL TESTIMONALS *left at the Office in reply to advertisements, and strongly recommends that* COPIES ONLY *should be sent.*

AN ENGINEERING and ARCHITECTURAL ASSISTANT, engaged for the past sixteen years on plans, &c. for public works of water supply, gas, and town sewerage, and in designing and superintending the erection of private and other buildings, is now open to a permanent ENGAGEMENT. First-class testimonials. Address A. C. F. 9, Trellick terrace, Vauxhall-road, Pimlico, London, S.W.

MR. J. B. LEONARD,
ARCHITECTURAL DRAUGHTSMAN,
ARTISTIC COLORIST, AND LITHOGRAPHER,
Removed from 21, Montague-street, Russell-square, to 58, TORRINGTON-SQUARE, W.C.

GAS-WORKS.—WANTED, a Young Man as an ASSISTANT, and to make himself generally useful.—Address, stating age, last employment, and wages required, to the Secretary, Gas Works, Red Hill.

SURVEYOR'S CLERK.—WANTED, a JUNIOR. Good Handwriting and knowledge of Building Accounts indispensable.—G. A. Y. 34, Eagle-street, Red Lion-square.

WATERWORKS FOREMAN.
THE Cambridge University and Town Waterworks Company are in WANT of a FOREMAN, for their Works. He must have a thorough, practical knowledge of Waterworks matters, such as Engines, Meters, plumbing, &c. All applications (endorsed "Foreman"), stating age, salary required, &c. to be addressed to me, at my Office, 7, King-street, Cambridge, on or before MONDAY, the 14th instant. HENRY TOMLISON, Manager.
Cambridge, September 2nd, 1863

TO MANAGERS OF WATERWORKS.
THE BANBURY WATER COMPANY (limited) are in WANT of a PERSON to undertake the duties of SECRETARY and MANAGER. He will have to keep the accounts, collect the moneys, and conduct the whole of the operations of the Company. The salary will be 75l per annum, with a commission of 5 per cent. on the gross income of the Company. Any information may be obtained by application at the Office of Mr. HEDLEY, Consulting Engineer, 28, Poultry, London, E.C.—Applications are to be forwarded to THOMAS HUNT, Esq. Chairman of the Water Company, Banbury, endorsed, "Manager," by the 19th of SEPTEMBER next.—By order, T. A HEDLEY, C.E. Secretary.
High street, Banbury, September 8th, 1863.

TO PARENTS.—An Architect has a VACANCY in his Office for a PUPIL (as Apprentice). Premium a secondary consideration.—Address, X. Y. Z. care of Housekeeper, 9, Adelaide place, London Bridge.

TO CAPITALISTS AND OTHERS.
WANTED, a PARTNER (either Sleeping or Active), in a large old established and prosperous BUILDER and CONTRACTOR'S BUSINESS in the country. He would be required to introduce from 1,000l. to 7,000l. into the business, for which mortgage security could be given. Unexceptionable references.—Address, L. Y. X. care of E. H. Farnell, esq. 33, Castle-street, Holborn, W.C.

WANTED, in the Office of a Manchester Architect, an able and quick PERSPECTIVE DRAUGHTSMAN and COLOURIST. Must be well up in Gothic and Italian Work and Figure Drawing. Liberal terms offered, and a lengthened Engagement if found satisfactory. Apply by letter to L. S care of Messrs Morris & Sutton, 5, Princess-street, Manchester.

TO CARPENTERS AND JOINERS
WANTED, a good LEADING HAND, for a constancy: one used to shop-front work preferred. Address, stating age and wages required, with other particulars, C. Y. Office of "The Builder."

WANTED, CARPENTER'S and JOINER'S WORK, by the piece or job. Stairs and Rails Prepared and Fixed, in town or country.—Address, W. G. 8, 42, Leighton-road, N.W.

WANTED, in a Builder's Office, a Clerk used to entering Time and Materials, and to assist in Keeping Coals.—Apply, stating Age, where last engaged, and Salary required, to S. W. Office of "The Builder."

WANTED, by a London BUILDER, an Active Young Man, as YARD FOREMAN and STORE KEEPER. He must write a good clear hand.—Address, stating age, where last employed, and wages required, to M. X. Office of "The Builder."

WANTED, in an Architect's Office, in the Country, a JUNIOR ASSISTANT. One who has had some experience in a Builder's Office preferred.—Address, stating terms, X. X. care of Mr. ROEBUCK, Darlington-street, Wolverhampton.

TO ARCHITECTS' ASSISTANTS.
WANTED, a Clever Artistic DRAUGHTSMAN. He must be well acquainted with the various styles of Gothic architecture, with a knowledge of Italian, and capable of drawing from rough sketches.—State full particulars of qualification, age, salary (for a permanency), to ALPHA, Shilling & Co.'s 5, Three King-court, Lombard-street, E.C.

WANTED, a good Mapper and Architectural DRAUGHTSMAN. One accustomed to survey and take out quantities preferred.—Address, stating terms, to C. E. Post Office, Nottingham.

WANTED, a DECORATIVE ARTIST, to design as well as execute work of a high class, arabesque, &c. in an establishment at the West End.—Apply by letter only, addressed C at Messrs. Wimor & Newton's, No. 38, Rathbone-place, W.

TO ARCHITECTS' ASSISTANTS.
WANTED, a thoroughly experienced ASSISTANT, to take charge of an office where several clerks and pupils are employed.—Apply, stating salary and references, to J. R. 17, Dean-street, Newcastle-on-Tyne.

WANTED, an ENGAGEMENT as ASSISTANT to a Surveyor or Engineer. Well acquainted with the usual routine of an office and sewerage works.—Address, R. Y. B. Office of "The Builder."

TO BUILDERS.
WANTED, by the Advertiser, a SITUATION as MEASURING CLERK. Has been articled to a London Surveyor, and understands measuring and taking off quantities. First class references.—Address, A. L. S. 2, Percy Villas, Westow Hill, Upper Norwood.

TO BUILDERS, PAINTERS, AND DECORATORS.
WANTED, a SITUATION, by a respectable Person of good address, aged 35, who practically understands every branch of the business of painter and decorator, including gilding. Can measure work, make out estimates, take orders, and do general office work.—Address, GAMMA, Office of "The Builder."

TO BUILDERS, CONTRACTORS, AND OTHERS.
WANTED, by an energetic and practical WORKING FOREMAN of MASONS, a RE-ENGAGEMENT as such, or to Take the Entire Charge of a Job. Unexceptionable references for ability, &c.—Address, P. M. 295, Caledonian road, N.

TO ARCHITECTS.
WANTED, by the Advertiser, an ENGAGEMENT in an Architect's office, for three days a week. Is accustomed to prepare designs, fair, working, and detail drawings, specifications, &c., or would prepare drawings, &c. at his own rooms. Terms moderate.—Address, B. J. Office of "The Builder."

TO BUILDERS, PAPERSTAINERS, AND PAINTERS.
WANTED, by a Young Man, a PAPERHANGER, constant EMPLOYMENT. Is fully competent in the decorative department, and has no objection to fill up time in painting. Wages 30s. per week. Satisfactory reference can be given. Address, by letter, post-paid, to R. B. No. 30, Chapter-street, Vauxhall Bridge-road, Westminster.

TO GENTLEMEN OF HOUSE PROPERTY.
WANTED, by the Advertiser, a PERMANENCY as PAINTER, GLAZIER, PAPERHANGER, DISTEMPERER, &c. Can have eight years' character from last situation. Address, C. M. care of Mr. Hill, Chemist, 1, High-street, Stratford, Essex.

TO BUILDERS AND IRONMONGERS.
WANTED, by an experienced Man, a SITUATION in the Hot-water, Bath, Gasfitting, Bellhanging, and other work. Has had good experience in Town.—Address, X. Y. Z. Office of "The Builder."

TO PLUMBERS, BUILDERS, &c.
WANTED, by a first-class PLUMBER, GLAZIER, and PAINTER, a constant SITUATION. Town or country.—Address, H. PLUMBER, No. 9, Alma-place, Lyam-road, Brixton, Surrey.

TO HOUSE DECORATORS.
WANTED, by a Young Man, aged 19, a SITUATION as IMPROVER. A premium given where a permanency can be insured.—Address, T. B. 2, Compton-street East, Regent-square, W.C.

TO BUILDERS AND SPECULATORS.
WANTED, by a Young Man of good experience, a SITUATION as SHOP or GENERAL FOREMAN, or to Take Charge of a Job, or a Job of Piecework.—Address, E. N. E. 5, Christ Church, Chelsea.

TO BUILDERS AND OTHERS.
WANTED, by a Young Man, a constant SITUATION as PAPERHANGER, PAINTER, and GLAZIER. Has had good experience.—Address, WILLIAM WARD, North row, High Path, Lower Edmonton, N.

TO HOUSE DECORATORS AND PAINTERS.
WANTED, by a Young Man, a SITUATION as MEASURING and ESTIMATING CLERK, or to Manage a Business. Reference to last employer and others can be given.—Apply by letter to A. W. Office of "The Builder."

TO BRICK-MAKERS AND BUILDERS.
WANTED, by a Practical Man, a SITUATION as FOREMAN and SETTER. He has a thorough knowledge of clamp and kiln work. Aged 38.—Address, X. X Post-office, 86, Hackney-road.

WANTED, by a Young Man, from the country, a SITUATION as IMPROVER, in the CARPENTERING and JOINERING.—Address, A. B. C. 31, Osnaburgh-street, Regent's Park, N.W.

TO CONTRACTORS, BUILDERS, BRICKMAKERS, and OTHERS. - WHITTLESEY, CAMBRIDGESHIRE.—TO BE SOLD, by Private Contract, a very superior and extensive BRICK and TILE MANUFACTORY, situate about two miles from the town of Whittlesea and four miles from the City of Peterborough, recently fitted up at a very considerable cost with Machinery, Buildings, and every other requisite for carrying on a most extensive business. The Brickfield extends over 9 acres of land, and contains many thousand cubic yards of coarse drave and sharp Sand, with an inexhaustible supply of blue Clay, which is perfectly free from stones and rubbish of every description. The Machinery, which is in first-rate working order, and arranged with a view to the utmost economy of labour, consists of a highly-finished Condensing Beam Engine of 12-horse power, Hoisting Drum and Tackle, Tipping Waggons, Crushing Rollers, Necessary Pumps and Parks, one of Ainsley's Brick and Tile Machines, capable of making from six to eight thousand Bricks, or twelve thousand two inch Pipes per diem; and also one of Lowe's Patent Brick and Tile Machines, only recently erected, which is capable of pugging and making eighteen thousand solid Bricks, or twenty eight thousand two inch pipes in ten hours. The Buildings consist of Office, Pattern Store, Pantile and Brick Sheds, upwards of two thousand superficial yards of drying Sheds for bricks and tiles, together with Pot and other Kilns capable of burning one hundred and twenty thousand bricks at a time. The high road leading from Whittlesey to Peterborough skirts the yard; the Great Eastern Railway forms its south-western boundary, and is connected with it by a siding; a private Wharf on the River Nene, having 7 feet of water at spring tides, adjoins the premises. The Manufactory may be seen at any time during working hours, and for further particulars apply to Mr. EDWARD LOOMES, Whittlesey; from whom also leave to view the Premises may be obtained on application.—For price and further particulars, apply to Mr. PEED, Solicitor, Whittlesey.

FARNBOROUGH and ALDERSHOTT FREEHOLD and GROUND-RENT SOCIETY (Limited).—To BUILDERS and OTHERS.—Land on this Society's Estate at Farnborough, TO BE LET on building leases, or TO BE SOLD, upon advantageous terms.—Particulars may be had of the Architect, Mr. H. CURREY, 4, Lancaster-place, Strand, W.C.; or at the Offices of the Society, 18, New Bridge street, Blackfriars,

EDWARD CHATFIELD, Managing Director.

BARKING, ESSEX. TO BE SOLD or LET, the whole or part of 10 acres of FREEHOLD BUILDING LAND, adjoining the Railway Station, fifteen minutes from Fenchurch-street, and with water carriage close by, affording a rare opportunity for manufactures requiring extensive space, but equally for building a public institution, or for the erection of moderate sized houses. The situation adjoining the stations affords the power of extending railways, in connexion with the existing line, all over the remainder, the soil is gravelly and perfectly dry. If sold, nine-tenths of the purchase money may be paid by instalments, with 5 per cent interest; but the whole or any part may be paid off at any time with interest.—For particulars, apply to Mr. WHITTINGHAM, 14, Morgate-street, London, E.C.; or to Messrs. RUSSELL & DAVIES, 53, Cornhill, London, E.C.

GROUND in BASINGHALL-STREET, now occupied by Houses and Warehouses known as Nos 20 and 21, Basinghall street, TO BE LET by TENDER, for Building purposes, a plan of the ground and form of letter may be obtained at the offices of EDWARD PANSON, Jun., No 74, Lawrence Pountney-hill, Cannon-street; or of Messrs. HOLLINGSWORTH, TYRRMAN, & GREEN, No. 34, Gresham-street, London; where Tenders, under seal, are to be delivered on or before the 14th OCTOBER next. The Owner does not bind himself to accept the highest or any Tender.

TO BUILDERS and OTHERS.—TO BE LET on LEASE, several ACRES of most eligible BUILDING LAND, in the neighbourhood of Hampton Court, overlooking the Thames and Bushy Park Very high, with gravelly soil.—Apply to W. WIGGINTON, Esq Architect, 7a, Lombard street, E.C.

WANTED, to PURCHASE or RENT, on long lease, a PIECE of GROUND, not less than 180 ft. by 60 ft. within half a mile of the South Kensington Museum, for establishing head-quarters for the 1st Middlesex Engineer Volunteers. Ground with old buildings would not be objected to.—For particulars apply to Major HARVEY, 71, St. George's-road, Pimlico, S.W.

TO BUILDERS, CONTRACTORS, and OTHERS.—MAINDIFF COURT ESTATE, near Abergavenny. Several PLOTS of FREEHOLD LAND (part of the above-mentioned estate) are TO BE SOLD, or LET on BUILDING LEASES, for the erection of first-class villa residences. The estate affords superb sites for houses, commanding beautiful prospects of the adjacent mountains, and a part of it will be divided into convenient pieces of land, ranging from four to eight acres each, to be let, at moderate ground-rents, or to be sold. Good family houses, with land attached, are in great demand in the neighbourhood. This estate is situate within one mile of the town of Abergavenny, on the turnpike road leading to Skenfrith.—For further Particulars and cards to view, apply to Messrs GABB & WALFORD, Solicitors, Abergavenny.

LEASEHOLD SAW and PLANING MILLS, with Steam Power, situate near the East and West-India Docks, TO BE LET or SOLD. The Machinery consists of a 8-horse power Steam Engine, Two Deal Sawing Frames, Pulling-up Bench, and a Planing Machine, by Horne, with Driving Shaft, &c; large Yard and Buildings.—For further particulars apply to Mr. GRIST successor to the late Mr. Barnes), Auctioneer and Estate Agent, No 78, King William street, Mansion House, E.C.

TO BUILDERS.—LAND TO BE LET, direct from the freeholder, well situate at Sydenham, near to Stations. Frontage 90 feet, depth about 130 feet Apply to Mr. A. ROGERS, Upper Sydenham, S.E.

TO BUILDERS and BRICKMAKERS. A most eligible PLOT of GROUND, very near to a Railway Station a short distance from London, calculated to produce 30 millions of Bricks. 13 acres. 100 semi-detached houses may be built, all very much needed, of any size to suit per an sum About 20 omnibuses daily, in addition to the railway trains, about 14 each day. For particulars address C. at Messrs. W. Brown & Co.'s, 40 & 41, Old Broad street, London, E.C.

barge, in any quantity alongside the Thames.

TERRA COTTA and Fine STONEWARE
POTTERY, warranted to stand Frost.
JOHN M. BLASHFIELD, STAMFORD POTTERY, STAMFORD,
LINCOLNSHIRE, has greatly improved and economised the manu-
facture of TERRA COTTA and Fine STONEWARE for ARCHITEC-
TURAL PURPOSES. He is able to make it of various new colours, so
as to harmonize with Marble, Portland, and other Stones, and equal
in hardness to Granite.
A Medal at the International Exhibition was awarded, in Class 10,
Section C, Architectural Objects, for "Perfection in manufacture and
beauty of form." A Medal was also awarded for "Terra Cotta."
Moulded Bricks, String Courses, Copings, Coils, Traceries, Balusters,
Capitals, Crosses, Ferneries, Vases, Statues, Brackets, Consoles, Gar-
den Edging, Guttering, six, nine, and twelve inch Paving Tiles, &c. &c.
Also Plain and Mosaic Pavements for Halls, Churches, Conserva-
tories, &c. in all colours.
London Office, 377, Oxford-street, W.

PRIZE MEDAL TO MAW & CO INTERNATIONAL EXHIBITION
1862.
IMPERISHABLE TESSELATED
PAVEMENTS, combining a highly decorative and economical
substitute for ordinary floors of their perishable coverings. MAW &
CO.'S Pattern-book, designed by M. Digby Wyatt, esq. together with a
special design and estimate of cost adapted to any given dimensions of
hall, passage, conservatory, verandah, frieze, &c. will be sent on appli-
cation to Benthall Works, Broseley, Salop.
May be seen at the Exhibition of Building Inventions, &c. now
open at the Galleries of the Architectural Exhibition, 9, Conduit-
street, free.
London Agents—W. B. SIMPSON & SONS, 456, West Strand, who
have on view a great variety of Specimens of the Pavements.

PEAKE'S TERRO-METALLIC TILES,
PIPES, &c.—Notice is hereby most respectfully given, that the
LONDON DEPOT for this WARE is REMOVED to No. 21 Wharf,
&c., adjoining Northey City Terrace, Basin, N. Bailly, that the trade
term. "TERRO-METALLIC," is the exclusive right of the Proprietor;
and Sully, that the "Reports of the Juries," page 561, of the Great
Exhibition, 1851, note the grant of a First class Medal and rank the
Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

TWO PRIZE MEDALS AT THE INTERNATIONAL EXHIBITION.
MAGNUS'S ENAMELLED SLATE
obtained the Medal of the Society of Arts, the Prize Medal at
the Great Exhibition, 1851, Two First-class Medals at the Paris
Exhibition, and Two Prize Medals at the International Exhibition of
1862.
Trashy imitations of this beautiful material are being palmed upon
the public. Architects are therefore requested to see that the name
of "MAGNUS" is upon each article.
Chimney-pieces, Billiard tables, Table-tops, Baths, Wall-linings,
&c. a New Illustrated Catalogue of which can be had at the Pimlico
Slate Works 39 and 40, Upper Belgrave-place, Pimlico, S.W.

Shutters, and the way they go up.
Sold by all Ironmongers, and the Inventor,
GEORGE JENNINGS,
Sanitary and Engineering Depôt, Palace Wharf,
Seagate, Lambeth, S.

DURABILITY of GUTTA PERCHA
TUBING.—Many inquiries having been made as to the Dura-
bility of Gutta Percha Tubing, the Gutta Percha Company have plea-
sure in giving publicity to the following letter FROM SIR RAYMOND
JARVIS, Bart. VENTNOR, Isle of Wight. Second Testimonial:—
"March 14th, 1862. In reply to your letter received this morning,
respecting the Gutta Percha Tubing for Pump Service, I can state
it is quite satisfactory, it answers perfectly. Many builders and
other persons have lately examined it, and there is not the least
apparent difference since the first laying down, now several years, and
I am informed that it is to be adopted generally in the houses that are
being erected here."
N.B. From this testimonial it will be seen that the CORROSIVE
WATER of the Isle of WIGHT has no effect on Gutta Percha
Tubing.
THE GUTTA PERCHA COMPANY, PATENTEES,
18, WHARF-ROAD, CITY-ROAD, LONDON.

POLYTECHNIC.—Patron: H.R.H. the
PRINCE of WALES.—Professor Pepper's adaptation of Mr.
Dirck's original and most startling Ghost Illusion, in three scenes.
First Scene—Reading from Dickens's "Haunted Man," and appear-
ance of the Ghost and Spectre of the sister. Second Scene—The
Artist's Studio—the ghastly visitor in the form of a rival artist—the
Ghost drinking a glass of water: this illusion must be seen to be be-
lieved: the living being enveloped by the Spectre. Third Scene The
reading of the love letter, and mysterious arrival of the little post-
man "Cupid." Engagement of Mdlle. Cavalho, for her new Vocal,
Organophonic, and Ventriloquial Entertainment. Herr Sussnati's
remarkable imitations of birds and animals. Entirely new series of
Dissolving Views of Poland and the Poles, with Lecture by J. Millard,
esq describing the Rights and Wrongs of that country. Pneumatic
Wonders, by J. L. King, esq. New Weber's Grand Opera of "Der
Freischutz." Open Twelve to Five and Seven to Ten o'clock.

1851.

TERRA-COTTA WORKS,
BLACKFRIARS ROAD,
LONDON, S.

MARK H. BLANCHARD&CO.
Successors to COADES.

1862.

Original Works established 1769. Terra-Cotta Manufacturers to her Majesty, the Commissioners of 1851, the Board of Works, the Trinity House, the Admiralty, the Royal Horticultural Society, and the Department of Science and Art, South Kensington, and the Recipient of the Prize Medal at the 1851 Exhibition for MATERIAL and WORKMANSHIP in TERRA-COTTA, and the only Recipient of Two Prize Medals at the 1862 Exhibition for TERRA-COTTA and POTTERY, have the honour to inform the Nobility, Gentry, Architects, and others, that they can be SUPPLIED from the above Works with every article in this imperishable and invaluable Material in Sculptural and Architectural Embellishments, suitable to the Palace, Mansion, or Cottage, which will be found to be unequalled in price, quality, and durability; and the Works of this Establishment have stood the test of time.

A beautiful variety of Statues, Statuettes, Vases, Tazzæ, Fountains, Flower Pots, Balustrade Terminals, and other adornments, suitable for the Conservatory, Flower Garden, and Grounds, at prices unprecedented. Estimates furnished.

An illustrated Priced Catalogue will be forwarded upon the receipt of eight postage-stamps.

HUBBUCK'S PATENT WHITE ZINC PAINT.
By the.r process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere
ADULTERATIONS—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent. Whether sold under the name of "Improved Zinc Paint," or as the number Two or Three qualities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.
CHEAPNESS—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil
EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."
THOMAS HUBBUCK & SON,
WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

A.

THE LANDSCAPE SKETCH ABOVE SHOWS

THE IMPROVED HYDRAULIC RAM.

This is a simple Self-acting Machine for Raising a considerable Supply of Water for Use in Public or Private Establishments where a fall can be secured from a Stream, Brook, or Springs. Messrs. FOWLER have fixed a great many Hy raulic Rams in various parts of the country, for raising from 600 to 6,000 or more gallons per day of twenty-four hours, varying from 20 to 30o feet, and forcing through main pipes from 50 yards to several miles in length. The fullest particulars and estimates will be handed on application.

No. 37 SHOWS A SET OF

TREBLE-BARREL PUMPS WITH HORSE GEARING,

For Raising Water from DEEP WELLS for the SUPPLY of TANKS in MANSIONS and PUBLIC BUILDINGS. Messrs. CLINTON & OWENS also Manufacture and Erect every other Form of Pump for Deep or Shallow Wells for Hand or other Power.

Fig. A SHOWS

A HYDRAULIC LIFT,

Worked by Pressure from a Cistern. Suited for Banks, Warehouses, and other Buildings. Messrs. C. & O. also Manufacture such Lifts to be worked by Hand Pumps, where pressure cannot be obtained from a Cistern.

CLINTON & OWENS

BARTLETT, BROTHERS, & CO.

DEVONSHIRE WHARF, CAMDEN TOWN, N.W.

Manufacturers of SILICATES and ALUMINATES of SODA and POTASH,

PATENT INDURATING SOLUTIONS,

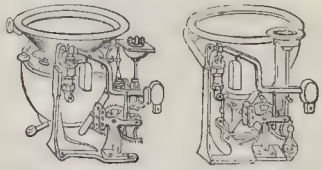
For the Preservation of Stone, Cement, &c.;

PATENT SILICEOUS PAINT, FOR COATING BRICKS, CEMENT, STUCCO, &C.

FIRE-PROOF VARNISH,

For Internal Wood Work, Roofs, and Church Work generally. This Varnish renders Wood Uninflammable, and Preserves it from Decay.

Specimens of the Silicates and Aluminates, and of their applications, may be seen at the CONSTRUCTIONAL DEPARTMENT, SOUTH KENSINGTON MUSEUM.



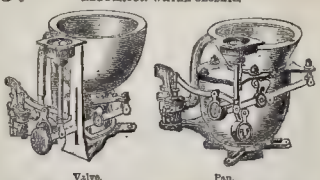
THE FLUO-SILICIC STONE-PRESERVING COMPANY, LIMITED.

39, CHARING CROSS, S.W. & 12, COPTHALL COURT, THROGMORTON STREET, E.C.

PATENT FLUO-SILICIC INDURATIONS for the PRESERVATION of STONE, CEMENT, and other like materials. The Company apply to the surface of Stone, Cement, &c. a solution of Fluo-Silicic Acid, and Silicate of Potash These are the only patents which embrace the use of that most valuable agent, Fluo-Silicic Acid. Bath, Caen, and other soft stones, when treated by the Company's solution, become extremely hard. The great expense of high ornament to buildings in hard stone has been an obstruction to Art; but since the Fluo-Silicic process can be applied so readily to soft stone after it is carved, that obstruction exists no longer. The Fluo-Silicic at once permanently arrests the decay of all stone.—For further information, apply to the Manager of the Company, Mr. DUDLEY, Architect, as above.

GUEST & CHRIMES, FOUNDRY and GENERAL BRASS WORKS, Rotherham; and 37, Southampton-street, Strand, London, W.C.

London House, Mr. THOMAS BEGGS.



ESKHOLME'S PATENT PNEUMATIC REGULATOR and VALVE CLOSET.

Suitable for first and second class houses, being most efficient and simple, free from all smell, and requires no cisterns, service boxes, cranks, wires, or levers, but is complete in itself ready for attachment to any ordinary house service pipes. It is supplied in three qualities, and equally efficient, differing only as to the style of fitting up. A second class quality is also manufactured. The Regulators are usefully applied to the ordinary Pan Closet, alike dispensing with all cisterns, service boxes, levers, cranks, wires, &c. The Regulator is supplied separately, as well as connected to ordinary direct Service Main Cottage Water Closets.

Chrimes's Patent High pressure Single and Double Loose Valve and Screw Down Cocks; Improved Self-acting and Pull Water Closet; Patent Absolute Water Waste Preventer; Plumbers' and Gas-Fitters' Brass Work of every description. Drawings, Descriptions, Prices, and Testimonials will be forwarded per post on application as above.

J. TYLOR & SONS' PATENT REGULATOR WATER-CLOSETS.

Valve. Pan.

The Regulator Valve gives perfect control over the supply of water to each closet, so that, however small the fall of water, perfect flushing is insured. Any number can be worked by one supply pipe. No cistern-valves, cranks, or wires required. The Closets can be seen in action at the Manufactory, and Illustrated Catalogues had on application to the Manufacturers, J. TYLOR & SONS, Warwick lane, Newgate-street, London.

PENCILS, BLACK LEAD, and COLOURED CHALKS.

A. W. FABER'S POLYGRADE LEAD PENCILS, sold by all Stationers and Artists' Colourmen.

Sole Agents HEINTZMANN & ROCHUSSEN, 9, Friday-street, E.C.

Canons' Marsh, Bristol, September 8th, 1863.

The Longcroft Larch Plantations, near Tring, Herts.

MR. W. BROWN has received directions to SELL by AUCTION, at the MART, London, on WEDNESDAY, OCTOBER 7, 1863, at TWELVE o'clock, in Three Lots, by direction of the Devisees of the late owner, a truly valuable FREEHOLD and COPYHOLD ESTATE, abutting upon the public road dividing the counties of Hertford and Buckingham, little more than two miles from the town of Tring, and within four miles of the London and North-Western Railway and Grand Junction Canal. It comprises a brick and tiled cottage, with garden; an orchard planted with choice fruit-trees, two highly productive inclosures of grass land (with cowhouse thereon), rated by ornamental timber and plantations, presenting an eligible site for the erection of a good residence; also, near thereto, two other plantations of about 23 acres, filled with fine larch of clear growth and good dimensions, considerable attention having been paid for many years to a judicious thinning and management thereof. The situation being convenient both for railway and water carriage, presents an excellent opportunity for profitable investment, by an annual sale for telegraph, railway, and other purposes.—Particulars, with plans attached, will be published in due time, and may be obtained at the Principal Inns in the vicinity; also at the "Estate Gazette" Office, Fleet-street; the Mart, London; of Mr SHUGAR, Solicitor; and at the Offices of Mr. W. BROWN, Land Agent, Tring.

TO PIANOFORTE-KEY MAKERS AND OTHERS.

MESSRS. C. & H. WHITE will SELL by AUCTION, on the PREMISES, Lett's Wharf, Commercial-road Lambeth, on TUESDAY next, SEPTEMBER 15th, at ONE, about Eleven Loads LIME-TREE BOARDS, adapted for pianoforte-key makers and others.—Catalogues of the Auctioneers, Kennington-cross, S.

CAMDEN TERRACE, CAMDEN TOWN.—TO BUILDERS, CABINET MAKERS, MANGLE MAKERS, AND OTHERS

MESSRS. LEREW & LEREW will SELL by AUCTION, at the YARD, as above, near the Old Eagle, on MONDAY, SEPTEMBER 14, at TWELVE, a quantity of PLANKS, DEALS, and BATTENS; 7,000 feet of wide pine board, 120 squares of flooring, 2,000 feet din square, 1,000 feet of mahogany, 2,500 feet of birch, 6,000 feet of quartering, dry cut stuff, 20 doors, 2 large slate cisterns, old materials, ladders, barrows, &c.—Auction Offices, Cardington street, Hampstead road.

TO PAINTERS, DECORATORS, BUILDERS, AND OTHERS.

MESSRS. LEREW & LEREW will SELL by AUCTION, at the YARD, in Camden-terrace, Camden Town, on TUESDAY, SEPTEMBER 15th, at TWELVE for ONE, in consequence of a sale not being permitted on the premises, the genuine STOCK and IMPLEMENTS-in-TRADE of Mr W. Larken, Charles street, Westminster, who has retired from business: consisting of very old varnishes, oils, and turps, glass in plate, brown, sheet, squares, and quarries; dry colours in great variety, made up paints, pumice stone, lift-pumps, plumbers' tools, paper-hangings, old building materials, and miscellaneous items. Auctioneers' Offices, 2, Cardington-street, near the Euston Station, N.W.

BISHOPSGATE-STREET WITHOUT.—TO BUILDERS, CONTRACTORS, AND OTHERS.

MR. MARSH has received instructions to SELL by AUCTION, on the PREMISES, on THURSDAY next, SEPTEMBER 17th, at TWELVE o'clock punctually, the BUILDING MATERIALS of Twelve Dwelling-Houses, Range of Stabling and Coach Houses, with rooms over, situate Nos. 20 and 21, New-street, the whole of New-street Mews, Nos. 1, 2, and 3, Cock-hill, and Nos. 1 to 5, Catherine Wheel-Alley, Bishopsgate-street Without: comprising about 100,000 sound stock bricks, tiles, slates, timber in roofs, floors, sashes and frames, doors, stable fittings, stone paving, lead, &c.—May be viewed the day prior to the sale, and Catalogues had on the Premises, and of Mr. MARSH'S Offices, 2, Charlotte row, Mansion house.

OXFORD.—VALUABLE BUILDING MATERIALS, comprised in the several Houses in Beaumont-street and Magdalen-street, the intended Site for the erection of the Randolph Hotel.

MR. JOHN FISHER begs to announce that he is instructed by the Randolph Hotel Company to SELL by AUCTION, in the month of OCTOBER next, the above BUILDING MATERIALS; consisting of roofs, floors, doors, sash-fronts, sashes and frames, partitions, staircases, fittings, &c. which will be found peculiarly good from the circumstance that the houses have been built within a few years.—Further particulars will be advertised previous to the sale.

TO IRONFOUNDERS, ENGINEERS, BOILER MAKERS, AND OTHERS.

ELLIOTT & SHAW are instructed to SELL by AUCTION, during this Month, unless previously disposed of privately, the valuable LEASE and PLANT, with possession, of an IRON FOUNDRY, known as the Grove Foundry, 91, Guildford-street, Southwark.—For orders to view, and all particulars, apply to the Auctioneers, 77, Basinghall-street, E.C.

TO SAW-MILL PROPRIETORS AND OTHERS.—Steam Saw-Mill, with Engine and Machinery, and Two Houses adjoining, in the Hackney road, with possession.

NOTICE.

BROWN & GREEN'S KITCHEN RANGE WAREHOUSE will shortly be REMOVED to the NEW PREMISES, 72 74, Bishopsgate street Within, a few doors from the present establishment. These will afford accommodation for a still larger stock of their Patent Prize Medal Ranges and Stoves, Register Grates, and Cooking Utensils, to meet the great public demand; and also for the consequent more extensive execution, by the manufacturers themselves, of all descriptions of hot water, bath, laundry, and steam work.

82, Bishopsgate street Within, July, 1863.

TO ENGINEERS and SURVEYORS.—PRIVATE BILLS, New Standing Orders for the ensuing Session, Levelling Books, Drawing Paper, Drawing Paper, and every requisite for the use of Engineers, &c. engaged in the preparation of plans for deposit. Plans, &c. lithographed with the greatest expedition.—WATERLOW & SONS, 49, Parliament-street, and 65, London-wall, London.

HOUSES of LORDS and COMMONS. SESSION, 1864.—The New Standing Orders relative to Private Bills are now ready, and will be delivered post free. Price, 5s.

WATERLOW & SONS, 49, Parliament-street, Westminster.

COMPETITIONS.

SAINT WINEFRED'S WELL, HOLYWELL. To ARCHITECTS and OTHERS.—The Local Board of Holywell having determined upon constructing NEW BATHS and improving and altering the present Baths and Premises of Saint Winefred's Well, Holywell, hereby offer a PREMIUM of THIRTY POUNDS for the TWO BEST PLANS; viz. FIFTEEN POUNDS each, one plan for the improvement and alteration of the existing baths and premises at present in the occupation of the said Local Board, and the other plan for the same premises as above, including the site of the mill and brewery, such plans to be accompanied with sections, elevations, specifications, and estimates. If the architect of either of the successful designs be employed to carry out the work, the premium to merge in the commission. All particulars and information may be obtained upon application to the undersigned. The designs to be sent in on or before the 31st day of OCTOBER next, under motto, with sealed envelopes addressed to

WM. DAVIES, Clerk to the Holywell Local Board.

Holywell, September 14, 1863.

CONTRACTS.

WAR DEPARTMENT CONTRACT. NOTICE to BUILDERS.—TENDERS are required for RENEWING COOKHOUSES, ABLUTION ROOMS, WASHHOUSES, and WORKSHOPS, at Hounslow Barracks, in the County of Middlesex.

Parties desiring to Tender for the EXECUTION of these Works must leave their names at this Office from the 21st to the 23rd SEPTEMBER, inclusive, between the hours of ELEVEN a.m. and THREE p.m. and pay the sum of half-a-guinea for the bills of quantities, which will be forwarded to each party as soon as prepared by the Government Surveyor

The Secretary of State does not bind himself to accept the lowest or any Tender.

Royal Engineer Office, London District, 11, James-street, Buckingham-gate, S.W. September 8, 1863.

COCKERMOUTH, KESWICK, and PENRITH RAILWAY COMPANY.—To BUILDERS.—TENDERS are required for the ERECTION of a large Roadside HOTEL at the Keswick Station, according to plans and specifications prepared by Mr. ROSS, Architect, Darlington, which can be seen at the Offices, Feetham, Darlington; or at the Offices of the Cockermouth, Keswick, and Penrith Railway Company, St. John-street, Keswick, from WEDNESDAY, SEPTEMBER 9, to WEDNESDAY, SEPTEMBER 16, 1863.—Sealed Tenders to be delivered to me before TEN a.m. on the last mentioned day. HENRY CAITLE, Secretary.

Secretary's Office, St. John-street, Keswick, August 28, 1863.

TO CONTRACTORS.—In consequence of the Death of the late Contractor, Sealed TENDERS will be received by the Secretary of the Bridge Committee of the Town of Dreghedia, for the date Hereof up to and upon THURSDAY, the 15th day of OCTOBER next

For taking down the present Bridge over the River Boyne, at Drogheda, and Building in place thereof a Stone Bridge of Eighty Feet Span.

According to Plans and Specification prepared by J. NEVILLE, Esq. C.E. to be seen at my Office, Fair-street, Drogheda; or at the Office of the Engineer, Leigh-street, Dublin, between the hours of TEN and FOUR o'clock every day (Sundays excepted) after this date. The Lowest or any Tender not necessarily to be accepted.

Dated at Drogheda, this 29th day of August, 1863

HENRY CLINTON,

Secretary to the Bridge Committees of the Corporation Harbour Commissioners and Grand Jury of Drogheda.

TO BUILDERS, &c.—TENDERS are invited from Builders willing to CONTRACT for the ERECTION of a DETACHED VILLA at Eltham, Kent. Plans and specifications can be seen after MONDAY, the 14th instant, at the Office of Mr. F. CHESTER HAWORTH, Surveyor, Lisbon, to whom TENDERS are to be sent on FOUR o'clock on THURSDAY, the 24th instant. The lowest or any Tender not necessarily accepted.

BRIGHTON.—To BUILDERS.—Persons desirous of TENDERING for the EXECUTION of proposed ADDITIONS and ALTERATIONS at HOOVE LEA, Hove, Brighton are requested to send their addresses to JAMES WOODMAN, Esq. Architect, 17, Prince Albert street, Brighton, forthwith. Neither the lowest nor any Tender necessarily accepted.

September 10, 1863

LINCOLNSHIRE COUNTY LUNATIC ASYLUM. To BUILDERS, CONTRACTORS, &c.—Builders desirous of TENDERING for the WORKS in ENLARGEMENT of the COUNTY ASYLUM, at Bracebridge, near Lincoln, or any works comprising a Portion of the Whole of those Works, for the private, may inspect the plans and specifications at the Asylum, and at the Office of Mr. ROBERT YOUNG, No. 1, High-street, Lincoln, on and after the 21st day of SEPTEMBER, instant. The work to be commenced early in the spring, and completed by the 1st of MAY, 1865. Forms of Tender, Schedules, and Bills of Quantities can be obtained on payment of one guinea, to Messrs. BAYSTONE & HUNT, Surveyors, 11, Park-street, Westminster. Tenders, &c. to be sent to the undersigned Clerk to the Visitors, at Sleaford, on or before the 23rd day of OCTOBER next, sealed and endorsed "Asylum Tender." The Visitors do not pledge themselves to accept the lowest Tender.

M. P. MOORE, Clerk to the Visitors.

Sleaford, 5th September, 1863.

SURREY COUNTY SCHOOL.—Notice is hereby given, that Plans and Specifications for the above-named School, to be built at Cranley, eight miles from Guildford, will be lying at Archbishop ABBOT'S Hospital, at Guildford, from WEDNESDAY, the 23rd instant, until SATURDAY, the 3rd day of OCTOBER next, Sunday excepted, and all persons desirous of CONTRACTING for the Works must send in sealed Tenders, addressed to the Rev. J. H. BAPTE, Cranley Rectory, Guildford, on or before SATURDAY, the 10th day of OCTOBER, 1863. Neither the lowest nor any other Tender will necessarily be accepted. The Contractor shall, if required, enter into the usual legal bond for the due fulfilment of his contract, with two good and approved sureties, at his own expense and cost.

CONTRACTS.

TO CONTRACTORS for WORKS of SEWAGE.—Notice is hereby given, that the Vestry of the Parish of St. George the Martyr, Southwark, is prepared to receive TENDERS for the EXECUTION of WORKS of SEWERAGE within the aforesaid parish. The forms of Tender and particulars may be obtained at the Office of the Vestry Clerk, Vestry Hall, Borough-road, Southwark. The Vestry does not engage to accept the lowest or any Tender. Every Tender must be delivered under cover, and endorsed "Tender for Sewers Work," at the Vestry Clerk's Office as above, before ELEVEN o'clock in the morning of THURSDAY, the 24th day of SEPTEMBER instant.—By order,

DANIEL BIRT, Vestry Clerk.

Vestry Hall, Borough-road, Sept. 12th, 1863.

TO BUILDERS.—The Directors of the South Staffordshire Railway are desirous of CONTRACTING for the ERECTION of COTTAGES, of an inexpensive character, at the four level crossings of the newly opened Tipton and Darlaston branches, viz.:—at—

The road leading to Mr. Howl's Brick Works.
Ditto called Church lane
Ditto leading to Messrs Bagnall's Works, on the Tipton branch, near Prince's-end Station.
and Ditto leading to Willenhall, on the Darlaston branch, near Darlaston Station.

Tenders, accompanied by the Builder's designs and specifications, to be sent on or before 24th SEPTEMBER, 1863, addressed to the undersigned, and endorsed "Tenders for Cottages," with the cottages are to be erected, may be seen at the Office of Mr. W. KNOX, Newstreet Station, Birmingham; and the cottages must be completed within four months, of good materials and workmanship, to the satisfaction of the Company's engineer.—By order,

C. E. STEWART, Secretary.

Offices, Euston Station, London, September 10, 1863.

TO BUILDERS.—TENDERS required for the ERECTION of FOUR HOUSES, at Norwood—Plans, &c. can be seen at the Office of Mr. T. K. GREEN, Architect, 25, College-hill, E.C.—The lowest or any Tender not necessarily accepted.

TO BUILDERS.—The PHILHARMONIC ROOMS, SOUTHAMPTON.—The Directors of the Southampton Philharmonic Rooms Company (Limited) are prepared to receive TENDERS for the ERECTION of the above ROOMS, in the Above Bar-street, Southampton. The drawings, specification, and conditions of contract may be inspected at our Offices, 24, Portland-street, Southampton

The Directors will not necessarily accept the lowest or any Tender, and the party whose Tender may be accepted may be required, if required, to give security for the due performance of the contract

HINVES & BEDBOROUGH, Architects.

PLASTERERS' WORK TO BE LET, at Kilburn. Immediately, of GEO. NAISH, 62, Snowhill. None need apply but with good references.

TO BUILDERS. — Persons desirous of TENDERING for BUILDING a GARDENER'S HOUSE, at Pavenham, near Bedford, the property of Joseph Tucker, Esq. of Pavenham, Bury, may see the plans and specifications by applying to the GARDENER, who will show the Estate of the building. From THURSDAY, the 17th, to THURSDAY, the 24th SEPTEMBER (inclusive).—Tenders to be sent in on or before TWELVE o'clock, on THURSDAY, the 24th SEPTEMBER, to Mr. WILLIAM WATSON, Surveyor, Henlow, Biggleswade. The lowest or any Tender will not necessarily be accepted.

Henlow, September 9, 1863

TO BUILDERS and OTHERS.—Persons desirous of TENDERING for the EXECUTION of the whole or any portion of the WORKS of the proposed MASTER'S HOUSES, in connexion with the Carlton College, are requested to apply at the plans and specifications on application to the Architect, Mr. CHARLES F. HANSOM, from MONDAY, the 21st instant, to SATURDAY, the 26th inst. The quantities in separate trades, or parts, can be had of Mr. J. A. CLARKE, Broad-street. Sealed Tenders to be delivered at the Office of the Architect, Bank House, Carlton, not later than NOON on MONDAY, the 5th of OCTOBER. No pledge is given for the acceptance of the lowest or any other Tender.

Carlton, September 18, 1863.

TO BUILDERS. TENDERS are invited for the ERECTION of the NEW CHURCH of ST. JOHN the EVANGELIST, at Masbrough, Yorkshire.—The plans and specifications may be seen, and quantities may be obtained, either at Masbrough, by application to the Rev. H. ST. PANCRAS IRON WORK COMPANY,

OLD SAINT PANCRAS ROAD, LONDON, N.W.

PATENT WROUGHT-IRON STABLE FITTINGS

SHOULD BE ADOPTED FOR THE FOLLOWING REASONS, viz.:—

That the BREAKAGES in Cast-Iron Fittings are numerous, and that one fracture from a kick, or other cause, may occasion an injury to a Horse, and involve a loss equal to the entire expense of fitting up the Stable. The fear of this has led to the use of wood, and, in the case of Cast-Iron GUTTERS, to the adoption of another and less effective mode of draining.

PATENT ENAMELLED TOP PLATE MANGER, WITH RACK AND WATER-TROUGH,

The whole of which, except the Rack, being enamelled, can be kept as clean as a DINNER PLATE.

PATENT FASTENINGS FOR THE DOORS OF LOOSE BOXES.

These Catches and Hangings work easily, are self-acting, and cannot be put out of order: by their use all projections by which horses are often blemished are rendered impossible; advantages peculiarly their own.

THE PATENT HARNESS FITTINGS

Keep the Harness and Saddles in shape, and are constructed so as to admit the air getting to the underside of them when hung up, thereby insuring a quick and perfect airing from any wet or moisture.

EVERY DESCRIPTION OF STABLE FURNITURE.

HULETT & CO. 55, High Holborn.

FIRE-PROOF CONSTRUCTION.—FOX & BARRETT'S PATENT.

This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete, so constructed that each floor becomes in effect a beam of artificial stone with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the Patent,

MR. BARRETT,

12, YORK BUILDINGS, ADELPHI.

MANTEL PIECES, ENGLISH AND FOREIGN,

IN EVERY VARIETY OF DESIGN AND COST,

Have been added to their LARGE and EXCELLENT ASSORTMENT of FINE FINISHED STOVES FENDERS, &c. in the NEW SHOW ROOMS of the

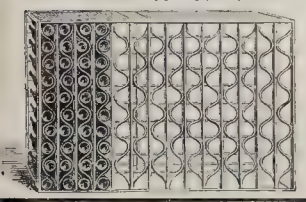
WROUGHT IRON WINE BINS.



FARROW & JACKSON

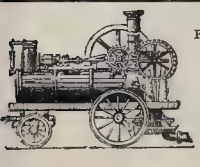
Beg to call the attention of Architects and Builders to their Wrought Iron Wine Bins, which are ADAPTED (as shown) either for BRICK ARCHED VAULTS or CELLARS with FLAT CEILINGS, the mode of fixing in either case being so simple, that they may be put up by any ordinary workman. They combine great strength with lightness and economy of space, and their DURABILITY has been satisfactorily PROVED DURING THIRTY YEARS.

The Shelves are formed of Plates of Iron laid on Bars, which rest on the Cross-bars of the Lattice Uprights, and are removable at pleasure.

Plans and Estimates furnished, and Cellars fitted complete in any part of the Kingdom. Also their

NEW REGISTERED IRON BINS,

Made any size or shape, to fit any spare corner, with SEPARATE REST FOR EACH BOTTLE,



Peculiarly adapted for Private Cellars.

No laths are required, and all trouble of Binning is avoided.

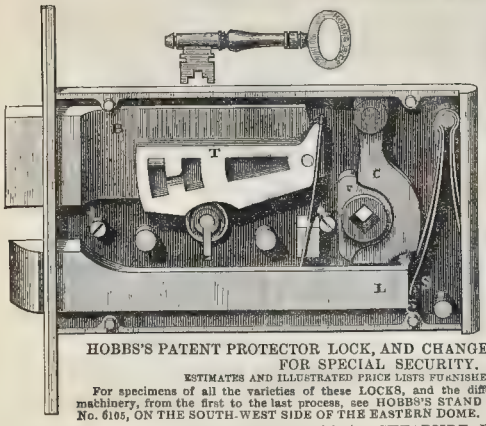
SHEFFIELD.



INTERNATIONAL EXHIBITION, 1862.—CLASS 31, LOCKS, &c. No. 6105.

HOBBS'S CELEBRATED MACHINE-MADE LEVER LOCKS,

Suited for all purposes, at Prices that silence competition.

SUITES OF LOCKS FOR MANSIONS, WAREHOUSES, AND OTHER LARGE STRUCTURES, WITH OR WITHOUT MASTER KEYS.

PUBLIC BUILDINGS OF EVERY KIND FITTED.

The parts in the Plate marked F and C show the form of Hobbs's Patent Frictionless Follower and Crank, by which a rolling instead of a rubbing motion is produced, thereby preventing friction.

S, s, shows the double spring, by which means the Latch is allowed to work independent of the Crank in shutting the door, thereby avoiding the necessity of slamming, at the same time sufficient strength is given by the Follower Spring to throw the heaviest knobs or handles.

HOBBS' PATENT FRICTIONLESS FOLLOWER, & DOUBLE SPRING FOUR-LEVER MORTISE LOCK, Price 8s.

FIREPROOF SAFES, IRON DOORS, CASH BOXES, &c.

HOBBS'S PATENT PROTECTOR LOCK, AND CHANGEABLE KEY BANK LOCK FOR SPECIAL SECURITY.

ESTIMATES AND ILLUSTRATED PRICE LISTS FURNISHED ON APPLICATION.

For specimens of all the varieties of these LOCKS, and the different stages of manufacture by machinery, from the first to the last process, see HOBBS'S STAND in the EXHIBITION, CLASS 13, No. 6105, ON THE SOUTH-WEST SIDE OF THE EASTERN DOME.

HOBBS, ASHLEY, & CO. 76, CHEAPSIDE, E.C.

NUT

PLATE.

We invite particular attention to the PATENT LOCK FURNITURE, which we do not hesitate to say is the most perfect article now manufactured, great improvements having been recently made in it. It has been extensively used in public and private buildings, in Her Majesty's Pavilion and Camp at Aldershott—alone, many hundred sets without one single failure. It is applicable to all Locks and Latches, both rim and mortise, and effects a most secure fastening, without any screw in the neck of the knob. Perfect action guaranteed in both Locks and Furniture, if the Locks are of our own manufacture.

New rich designs in glass, china, brass, bronze, gilt, carved woods, inlaid, &c. &c. or to any design.

THIS FURNITURE MAY BE HAD WITH PLATES OR NUTS.

A most complete and extensive stock of every description of locks, latches, brass foundry, and ironmongery, required for buildings, of the best quality manufactured, at the lowest wholesale prices

*** Illustrations and particulars sent upon application.

PATENT WORCESTERSHIRE RANGE.

PRIZE MEDAL 1862. AWARDED FOR EXCELLENCE.

The above RANGE is most complete, and strongly recommended for its unrivalled ECONOMY, CLEANLINESS, CONVENIENCE, DURABILITY, and is a certain CURE for SMOKY CHIMNEYS.
It is an entirely new invention, and consists of large MEAT ROASTER, PASTRY OVEN, and WROUGHT IRON BOILER. The top forms a HOT PLATE for BOILING, STEWING, &c. The whole heated by ONE SMALL FIRE. One 5 feet wide is equal to an ordinary Range 8 feet wide.

Extracted from the "London Daily Telegraph," May 19th, 1863.

"INTERNATIONAL EXHIBITION, CLASS 31.

"Of the most recent inventions it should be said that Messrs. JONES & ROWE'S Patent Worcestershire Range has attracted very special attention, and has been commended by the best authorities. A valuable peculiarity of their Ranges is the placing of the OVEN and ROASTER one above the other, instead of *side by side*, and the ROASTER is constantly replenished with fresh air."

IMPORTANT TO ARCHITECTS, ENGINEERS, BUILDERS, RAILWAY, AND OTHER COMPANIES.

VIEILLE MONTAGNE ROOFING ZINC.

Company's General Agency, 12, Manchester Buildings, Westminster.

Zinc properly laid has been proved by most extensive and long experience in France, Belgium, and Germany to be a most secure, durable, and economical covering, and is now preferred to all other materials for roofs. Its extreme lightness makes it most valuable for covering buildings requiring large spans with comparatively light framing. On a rough calculation it may be estimated that not less than 41,000,000 square feet is the average quantity of Roofing surface now annually covered in the above countries alone. Within the last few years persevering efforts have been made to introduce into England proper workmanship, in accordance with the principles which are observed on the Continent, and which alone can secure the sound and perfect construction of a Zinc roof. To aid in extending as much as possible the knowledge of these simple rules, models showing all the details are to be seen in the Architectural Exhibition in Conduit-street, and the following, selected out of a very great number of recently constructed roofs, are referred to as examples:—The Patent Granary, West-India Docks; Copenhagen Works, Limehouse; a private house in Holland Park; Homes for Poor Merchants' Clerks, Muswell-hill; a large Warehouse, 77, Thames-street; Ship roof, Sheerness Dockyard; the Victoria Station, Pimlico; the Stations in the Metropolitan Railway; the Stations of the Madras Railway Company (400,000 feet); the Warehouse of Messrs. Oakes, Brothers, & Co. Madras (20,000 feet); the Refreshment Rooms at the Exhibition; the Verandah of the Horticultural Society's Conservatory; Gloucester Railway Station; Messrs. Horniman & Co.'s Tea Warehouse, Wormwood-street; Messrs. Hoare & Co.'s Brewery, Smithfield; Cape Town and Wellington Railway (60,000 feet); Fifty new Dwelling Houses at Palace Gardens-terrace, Kensington; Twenty ditto, Inverness-terrace, Bayswater.

Plans, Estimates, and all useful information will be furnished, without charge, by applying to either of the Directing Architects.

JAMES EDMESTON, 5, Crown-court, Old Broad-street.
R. G. FISHER, 12, Manchester-buildings, Westminster.

N.B. No covering can be more economical, durable, and secure than Zinc when well laid, but good Zinc badly laid will spoil the roof, and, with a view still further to encourage good work, a special Discount will be allowed to all persons upon the Zinc used in roofs, when certified by either of the above Architects to be properly laid.

JAMES W. TYLER, CONTRACTOR FOR

DEVAUX'S VIEILLE MONTAGNE THICK ZINC ROOFINC,

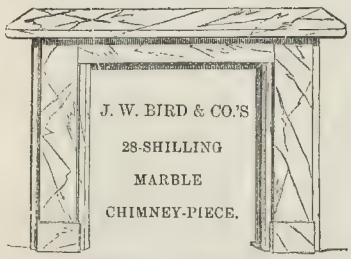
ON IMPROVED PRINCIPLES.

12, ABINGDON STREET, and 4, WOOD STREET, WESTMINSTER, close to Victoria Tower.

Estimates furnished for every description of Zinc Roofing and Guttering, inclusive or exclusive of Timber or Iron Framing, in all parts of England.
Having for several years been actively employed in laying DEVAUX'S THICK ROOFING ZINC (the purest extant) upon the new principles introduced by Mr. Edmeston, Mr. TYLER can refer with confidence to work done as his best recommendation.
Good Zinc badly laid will still be a failure, for there is much more importance in the mode of laying than is yet generally known; and parties who will intrust their work to Mr. TYLER will find that this important point is thoroughly attended to, and at no extra cost.
This Zinc thus laid is quite as lasting as lead, if the woodwork is arranged according to Mr. TYLER'S directions.

BATH STONE OF BEST QUALITY.

RANDELL & SAUNDERS, Quarrymen and Stone Merchants, Bath.



List of Prices at the Quarries and Depôts, also Cost for Transit to any part of the United Kingdom, furnished on application to BATH STONE OFFICE, CORSHAM, WILTS.

DEVON.—An old-established MARBLE and MADREPORE MANUFACTORY TO BE SOLD by Private Treaty (price about £1,500), or Let for a Term.—For further particulars apply to Messrs. KITSON, Stonemasons, Torquay.

DURABILITY of GUTTA PERCHA TUBING. Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter FROM SIR RAYMOND JARVIS, Bart. VENTNOR, ISLE of WIGHT.—Several Testimonials.—"March 10th, 1862.—In reply to your letter received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state with much satisfaction, it answers perfectly. Many builders and other persons have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."
N.B. From this testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

VOL. XXI.—No. 1076.

Going Along.
Paris: Strasburg.

ALL know nowadays that travelling is a comparatively easy matter, that railways have removed crookednesses, and that very much may be seen in a short time. Still, sitting at home and viewing far-off places through the old traditional medium, many scarcely realize what *can* be done in a few weeks, and with what little trouble. It occurs to us, therefore, that it may not be useless to jot down some notes of a recent rapid (though not hasty) tour, which ran thus,—Paris, Strasburg, Carlsruhe, Munich, Linz, the Danube, Vienna, Salzburg, Innsbruck, the Alps, Botzen, Verona, Venice, Vicenza, Milan, the Italian Lakes, Turin, Geneva, Macon, and so home again by Paris first-named. It occupied six weeks, including three or four days for the new buildings in the last-mentioned city, and the fresh collections in the Louvre,—that wonderful storehouse of things beautiful. An esteemed professor of our art was not far wrong when, being asked a few days ago, by one who was going to Paris for the first time and had but a week to spare, how best to employ it, he said,—"Exhaust the Louvre." "Beware of the man of one book" is an old maxim for the disputatious; the man of one museum, that museum being the Louvre, would be a still stiffer opponent. However, the exhausting process is not our present purpose, as will be seen from what we have already said. It will be readily understood that we do not advise such rapid travelling as that here described to those who can give more time to it, and return on their footsteps again and again. The object we have in view is to show those who have but little time to spare how much they may nevertheless see in it. To our younger readers, led to undertake such a trip or part of it, we would first say, as we have said before, take plenty of maps, guide-books, and sketching materials. Draw, draw, draw; and omit not to keep a diary. Remember, too, as Bacon hath it, that "he that travelleth into a country before he hath some entrance into the language, goeth to school and not to travel." At the same time we must observe, the fact of ignorance of foreign languages should not keep people at home. This would be simply making bad worse. With a smattering of French, or even without it, any one can now get along easily and still with profit.

The road we take is a hackneyed one, well known to many of our readers and thoroughly described in Murray's excellent handbooks. To others, however, it is unknown; and as we shall but touch it here and there, our notes may serve to refresh the memory of the first while they may excite the attention of the second, and certainly will not be long enough to tire either. We may hope to hit a new point or two, and shall bring in some illustrations of recent works. The South-Eastern Railway Company take us to Paris by way of Folkestone, Boulogne, and the *Chemin de Fer du Nord*, past the fine cathedrals of Abbeville and Amiens, and the towns of Clermont, Creil, and Pontoise. Between these three last-mentioned places the traveller for the first time is surprised by the number of churches that appear, the towers of which are gabled, and have a saddle-back roof. Some of these are of the twelfth century, and deserve study. Mr. R. J. Johnson, in his valuable "Specimens of Early French Architecture," has illustrated one close to Creil. Nearing Paris, say at Enghien, the great change which is taking place in the mind of the Frenchman touching a residence becomes observable. Cottages, "villas," and other residences for one family only, have been erected in all directions; and this is everywhere to be seen around Paris.

The new Paris Station of the Northern Railway, by which we arrive, is approaching completion. The front, of stone, is large, handsome, and appropriate, and shows the hand of an accomplished architect—M. Hittorff. His son has superintended the erection. The central archway has an elevation of about 100 feet, and is surmounted by a statue symbolizing the City of Paris. Besides this there are twenty or thirty other life-size figures representing cities, exceedingly well executed. We must do more in this way in England than we have yet done, thanks to the parsimony of employers and the state of public opinion on the subject. Without sculpture, life and character in a building are scarcely obtainable. Have we even yet the men in any number (willing so to work) capable of executing efficiently sculpture for architectural purposes? Paris is fortunate in having a good stone near at hand, an atmosphere not charged with coal-smoke, plenty of artist-workmen, and a right feeling as to the desirability of employing them. We have said lately so much of Paris, so much of the remarkable changes effected in it under the inspiration of the Emperor, that we shall now not stop there very long, but may touch it again in returning, and illustrate a few fresh features. Something, however, we must at once say.

The new collections at the Louvre, under the title of "Musée Napoléon III.," include antique sculptures, vases, majolica ware and other *faïences*, some rare glass, jewelled cups, early metal-work, Limoges enamels of wonderful beauty, and 303 pictures ranging from the time of Cimabue to that of Carlo Dolci, being a selection from the Campana Collection. The Gallery of Apollo, which contains some of the best of the glass and enamels, has been decorated quite recently, indeed is not yet finished, with a series of portraits, down to the knee, of architects and sculptors, very well executed, and very flattering to art. There are here an eleventh century metal shrine with figures, and two of the best pieces of Limoges work, signed "Lionard Limosin, 1553" (and well known), that are to be found. These consist each of a large centrepiece, with smaller pieces surrounding it. The centre of one, the finest, represents the Ascension, inscribed, *Donec totum impleat orbem.* In a lower compartment kneels Francis I., and as Henry II. was then reigning, we find the interlaced H. and two D.s amongst the ornamentation. The centre compartment of the other piece represents the Crucifixion.

Lionard was formerly considered the founder of the school, but it has been made clear that Limoges has been in the constant and uninterrupted possession of the art of enamelling from the eleventh century. He was, however, the head director of the royal manufactory of enamels founded at Limoges by Francis I., who bestowed on him, says Labarte, with the name of Limousin, to distinguish him from Leonardo da Vinci, the title of "*Peintre émailleur, valet de chambre du roi.*" This story is doubtful; but let it pass. The works of Lionard (or Léonard) range from 1532 to 1574. Those of which we have been speaking, two of his finest, were painted by order of Henry II., for the Sainte Chapelle. In the same gallery there is another well-known work in Limoges enamel, an oval dish, signed "Suzanne Court," usually considered one of the family of Courteys or Courtois, whose fine works in the Hôtel Cluny will be remembered by those who interest themselves in such matters. A little examination, however, leads to the belief that the Courts were a separate family of enamellers. There is another of her works in the museum of the Sèvres establishment, signed in a precisely similar manner, "Suzanne Court." There are some very fine specimens of Palissy ware and engraved glass in the Musée Napoléon III., and a bronze winged helmet of Roman times, or more probably Gaulish, which would gladden the heart of Ronge Croix Planché.

Of the quaint and rare "Henry II. ware" there are eight pieces, namely, four salt-cellars, two cups, a small kettle-shaped vessel with crucifix in front, and a cover of a cup not there. None of them equal in size or beauty some of the specimens exhibited last year in the Loan Court of the South Kensington Museum.* Nor must we omit to mention the illuminated "Hours" of the Emperor Charlemagne, A.D. 780; the metal, curule, chair still marked as that of Dagobert, A.D. 628, but which looks to be part earlier and part later, though none of it is more modern than the tenth century; and the grand Ivory Retable de Poissy, which is about 7 feet wide, 7 feet high, and displays seven ranges of carved figures, illustrating the life and passion of the Saviour, with three canopies at top, besides niches and figures at the bottom. If we recollect rightly, but we made no note at the time, it is a work of the fifteenth century.

Touching the pictures, with a diffidence to be commended, though the result is not satisfactory, M. F. Reiset, who has arranged them, and prepared a catalogue under direction of the Count de Nieuwerkerke, has named the painter of but few of them, contenting himself with classing them in schools. Thus, under the head of "School of Giotto" (Giotto died A.D. 1336), he places a remarkable St. Christopher bearing the infant Jesus. The child carries a globe, on which may be read "Asia, Africa, Uropia." A series of scenes from the Life of our Lord on nine panels, enclosed in three frames, is a very noticeable work of the same period. The earnestness and sentiment depicted in the heads give these early pictures a remarkable character. We might point also to the Annunciation, attributed to Agnolo Gaddi, painter and architect, son of the best of Giotto's pupils, and who died at the end of the fourteenth century; and to works by Lorenzo Veneziano (dated 1372), and Stefano Veneziano (dated 1353). In a picture of the School of Sienna,—commencement of the fifteenth century, wherein the Virgin is represented standing, holding the Infant Christ, and having under her mantle a crowd of persons of all conditions,—the heads of the latter display remarkable delicacy and beauty. In the foreground of the picture a number of penitents are administering flagellation to themselves, a portion of the dress of each being removed to show, curiously, the wounded back. A predella of five parts, illustrating the Life of St. Jerome, by Ansano, or Sano di Pietro, who died in Sienna in 1481, justifies the high opinion of a late editor of Vasari, who places Ansano amongst the most celebrated miniaturists. Vasari himself has not spoken of him. His works before us show great purity and elevation of thought. There is a Portrait of a Man dressed in black, and wearing a black cap, signed *I. Francia Aurifex Bononiæ*, and although we agree with M. Reiset that this writing is a forgery, and believe that the picture has been rehandled, it is a striking and charming work. We may not attempt, however, to point to all that interested us, but must get out into the air again. In due time some of the pictures now hung will be turned out and others will be rightly named.

The square and octagon Gothic tower (something like the upper part of the tower of St. Dunstan's-in-the-West), erected at the east end of the Louvre to tie into a whole the new mairie of the arrondissement and the restored ancient church of St. Germain l'Auxerrois, is not successful.

* At the Hôtel Cluny, by the way, there is one piece of this ware, a sugar-dish with cover.

The details and carving are as bad as need be. The mairie, while it is made to match in mass and outline with the old Gothic church, with rose window, parapet, and gable, is of the Renaissance style in its details. A very large church, also in the style of the Renaissance, is being erected, and has made considerable progress, in the Rue St. Lazare. This stands at a point formed by the meeting of two streets, opening into the Rue St. Lazare, and serves to terminate the Rue de la Chaussée d'Antin. The greatest care, wisely, has always been taken in the French capital to place public buildings at the end of vistas; where, while they may be well seen, they aid the general effect. A new building for the Tribunal of Commerce and Prud'hommes is rising on the quay, not far from Notre Dame. It has a dome of peculiar and not pleasing shape. The exterior being at present wholly *en bloc*, it would be unfair to judge of its ultimate appearance. Various statues, of which we hear good things, are to form part of the main façade. The river front of the Tuileries is being completed; and two more new streets are being opened. One improvement struck us as much needed, and that is the removal of the ugly hospital, or Hôtel Dieu, next the river, which shrouds and damages Notre Dame, now restored. And, while suggesting, we would point to the English Protestant Church in the Allée Marbeuf of the Champs Elysées, as a positive disgrace to our faith and country. Would not an effort obtain means, without much difficulty, to erect a better building? The manner in which the services have been performed here lately is not very satisfactory; and we might ask why, with necessarily a fluctuating congregation, a private hymn-book,—of which, moreover, the second edition differs from the first,—is substituted for the psalms and hymns of the Prayer-book in every one's hand? The places used for Protestant worship in other countries besides France are discreditable and damaging, as we may take occasions to show.

The Chapel of St. Ferdinand, a *Chapelle Ardente*, erected on the other side of the Champs Elysées, on the spot where Louis Philippe's eldest son, Ferdinand Philippe, Duke of Orleans, died after a fall from his horse, in 1842, is externally a poor mean thing. Within, it is less unsatisfactory, and that is as much as can be said. The style followed is Byzantine. It contains a recumbent marble statue of the duke, by M. Triqueti, with an angel at the head by the Princess Mary of Orleans; stained glass in the windows, executed at Sèvres, from the designs of Ingres and others; and a large portrait-picture of the Prince's last moments, his family and the ministers standing around. Farther on, towards the Bois de Boulogne (one of the best monuments of the Emperor Louis Napoleon's reign) is the Russian Church, lately completed, of which our readers have heard more than once. This, too, is Byzantine in style, but a work of very different character; though here, also, the exterior, with its domes, Russian crosses, and porch, is less satisfactory than the interior. The porch, which has a trefoil arch on each side, and one in front, all springing from one slight column at each angle, is coming to pieces, and may need what the older architects often introduced at first, a horizontal bar at the springing. "The arch never sleeps." The interior of the church, a Greek cross in plan, is painted and gilt from top to bottom by Messrs. Sarroquin, Vassillieff, & Bronikoff, all Russian artists. The cherubim in the spandrils of main arches, and the red winged figures around the Saviour in the centre cupola, are ugly and disagreeable. The Iconostasis is adorned with painted figures on a gold ground, which, from the distance at which alone visitors are allowed to view them, appear to be good works; and the effect of the whole interior is certainly harmonious and pleasing.

The building for the Permanent Exhibition, at a short distance from Auteuil, about two miles out of Paris on the road to Sèvres, and of which illustrations have been given in the *Builder*, is being fast proceeded with. The columns, girders, and external stone walls for the lower story are up all round, and parts are much more advanced. Thus the principal entrance is up to the extent of perhaps 45 feet, and one end of the building is roofed in. Two travelling scaffolds on a railway, founded on those which were contrived for the construction of our International Exhibition building at South Kensington, are in use. The iron work is strong, almost to the extent of clumsiness; but this appearance will be lessened by the painting and decoration which are to come. The floor of the galleries is formed with concrete on girders. The dome, as our readers know, is to rise to a height of 345 feet, and the building will present a clear space 1,050 feet long, and 130 feet wide, and be 110 feet in height to the crown of the semi-circular roof. Omnibuses running on rails all the day make the building less than half an hour off from the brilliant Place de la Concorde.

One note more, and that a small one, though with practical bearing, and we leave for the present magnificent Paris,—Paris which has now the finest set of streets in the world; and yet presents in parts houses arranged as if for the purpose of injuring health and shortening life; dens overcrowded from roof to foundation, producing fevers which are not to be limited to where they are first fostered. The note applies to the beauty of the writing in the streets, in the large majority of cases, on shop-fronts and other establishments; especially as contrasted with the coarseness and ugliness of that to be seen in London. The *Cinque-cento* writings of Italy appear to have afforded the principal types. Remembering the ugly letters used in the streets of Paris ten or fifteen years ago, the improvement is even more striking. The same excellence in this respect is now to be observed in Austria and Italy.

A run to St. Denis showed us that the Government are wiping out the blots that were made in the cathedral by a previous Government. Money was spent to spoil, and now money is being spent to get rid of the effects of the first expenditure. The sham Royal Mausoleum, as the crypt was termed, is shut up; the modern glass, mostly very bad, is to give place to better; the monuments are being re-arranged, and, under M. Viollet le Duc, the east end, shut off by partitions, is undergoing complete repair and restoration, and has received a new high altar of his design. The effect of the exquisite triforium of the nave, open to the light, is entirely destroyed by the stained glass now in it, which mars its lines and prevents it from being properly seen. The thirteenth century glass at the west end; two carved capitals ascribed to the eighth century, now in a chapel on the north side; a fine sixteenth century carved wood altar-piece, illustrative of the life of Christ; the excellent fourteenth century (?) sculpture in the chapel of St. Philip; and a singularly large and perfect incised memorial slab, should not be overlooked.

A long day on the rail; past Meaux, where the cathedral is suffering restoration; Chalons, Vitry, Bar le Duc, Toul, and Nancy; brings us to *Strasburg*. On the road, more of the towers with saddle-back roofs are seen, and fresh signs of the life which is everywhere evident in France,—new residences, mills, and churches. It was night when we reached Strasburg, and the first thing done was to run to the Cathedral, with the hope of a moonlight effect; nor was the hope unfulfilled. Dark at first, we were soon able to say with Croly:—

> "How like a queen comes forth the lovely moon
> From the slow opening curtains of the clouds;
> Walking in beauty to her midnight throne!"

Spire and open staircases, pinnacle and parapet, are gradually lighted up; quietly spreads the mild radiance; and soon the whole of the glorious structure shines in splendour; the crowning cross lost amongst the stars. Such a sight becomes thenceafter a piece of one's life, and never departs.

THE TUNNEL THROUGH THE ALPS.

This extraordinary and gigantic work was sanctioned by the Sardinian Government, on the 15th April, 1857, for the purpose of effecting direct railway communication between the kingdoms of France and Italy. It is, therefore, an international work of great importance; and from the nature of the project, and difficulties to be overcome, it has attracted a large and increasing amount of interest throughout the length and breadth of Europe. Historians of the classic age gravely tell us that Hannibal forced a passage through the Alps, for himself, army, and elephants, by the simple process of dissolving them with vinegar. It is much to be regretted that modern engineers cannot adopt the process of Hannibal, at once so simple, short, and sublime. He must have had better chemists, or, at least, stronger vinegar than we possess at the present time. Cannot this wonderful vinegar be rediscovered by some of the learned members of the British Association for the Advancement of Science, or by some of the erudite academicians of Paris or Turin, who are so deeply interested in the cutting of this tunnel? Hannibal's famous vinegar, however, like the Greek fire, perpetual motion, the black broth of Sparta, and the philosopher's stone, stands a poor chance of being rediscovered, unless it should be stumbled upon, as usual, among some of the musty records so carefully treasured up in the flowery land of China. "*Mais, mes amis, revenons à nos moutons.*"

At present there is a grand break in the railway system connecting France and Italy, this break being occasioned by no less an obstruction than the snowy Alps. Mont Cenis blocks the way.

To pierce a passage through these Alps is the object of this tunnel now in process of execution. The line from Genoa and Turin at present stops at Susa, and that from Lyons at St. Michel, Mont Cenis intervening its lofty head.

The northern entrance of the tunnel is near the little hamlet of Fourneau, and less than half a mile from the small town of Modane, the latter place being the last scene of Sterne's "Sentimental Journey;" and not a long way farther up the same valley Horace Walpole lost his favourite lapdog, through the agency of a hungry wolf, who rushed from the rocks and gobbled him up, much to the grief of that nervous little gentleman. The southern end is in a deep valley at Bardonnèche, on the Italian side of the Alps.

The entrance to the tunnel on the side of France is 1202·82 metres above the level of the sea, and its termination on the Italian side 1335·38; so that the actual difference of level between the two extremities of the tunnel is 132·56 mètres, or about 435 feet, the Italian end being this much the highest. There are two gradients in the tunnel, which divide it nearly in two equal lengths, the ascending gradient from the side of France rising to 135·63 mètres, from which point it gradually falls to the opposite end on the side of Italy, to the amount of only 3·07 mètres, or about 10·072 English feet, in a length of nearly 3¾ miles; so that for this latter distance it may be considered as being practically level.

The rising gradient ascends to the middle of the tunnel at the rate of 20·22 mètres in 1,000 or 1 in 45 according to the English mode of expressing the value of gradients. The descending one falls at the rate of 0·50 mètre in 1,000 which is equivalent to 1 in 2,000; so that one half of the tunnel has a tolerably stiff gradient and the other quite easy; but for such an Alpine country the 1 in 45 is much better than might have been expected under the circumstances. This is, however, sufficiently heavy, when it is borne in mind that the whole of the railway traffic between France and Italy will have to traverse the tunnel.

It was, of course, necessary to prepare accurate plans and sections, to determine the levels, fix the axis of the tunnel, and set it out on the mountain top; to erect observatories and guiding signals solid, substantial, and true. The mountains had to be surveyed and triangulated, bases measured, and the exact length and levels of the tunnel determined with the greatest care and accuracy, for errors in the angles and reduced calculations would have led to the most disastrous consequences in a tunnel of this enormous length.

The difficulty of tracing the axis and setting out a corresponding line over the summit of an Alpine range, over rocks, ravines, and precipices of continually climbing, ascending, and descending the immense heights, from point to point and from station to station, will be readily appreciated by those accustomed to ramble among lofty mountain ranges.

Great as the labour and difficulty of climbing and scaling these rugged heights may have been, they were as nothing compared to the engineering difficulties created by the inclemencies of the weather. These were the greatest stumbling-blocks of all, from the impossibility of continuous work with levels and theodolites in such a wild and exposed place. The engineers were exposed to all the tempests common to these Alpine regions,—rain, mist, sleet, drifting snow, and their more troublesome and ever constant enemy, the howling wind, ever constant in its wild and fierce inconstancy.

It was impossible to work with delicate instruments when exposed to storms and hurricanes at these lofty elevations; hence it frequently happened for days together that not a single observation or an angle could be taken.

All this involved the daily necessity of climbing and scrambling among pathless rocks, from 800 to 1,000 mètres in height, to embrace any favourable opportunity or lull in the storms which might occur, and snatch an observation, an angle, or run a level, when a lucky chance presented itself. They had to watch opportunity, and be ready for every occasion.

However, after a long, laborious, and patient work, this all-important and interesting triangulation, with all its troublesome details, was brought to a happy issue and triumphant conclusion; the final direction and exact length of the axis of the tunnel accurately determined; all the observations and signals firmly fixed in their true positions;—worthy monuments of high skill and patient perseverance under difficulties and embarrassments of no ordinary kind.

The total length of the tunnel was determined to be 12,220 mètres, or about *seven miles, four furlongs, and one hundred and sixty-four yards*; and notwithstanding all the difficulties of the various operations, and ceaseless hinderances; in spite of Alpine seasons, so accurately was the triangulation executed, that the maximum deviation from exactitude was confined within the limit of 11·417 inches in the whole distance of 7½ miles, or about 1½ inch per mile, which, of course, can have no practical effect in a work of this magnitude: a great and distinguished proof of the energy and ability of the Italian engineers employed in this delicate and critical operation.

The mountain through which the tunnel is to be pierced is exceedingly rough and irregular in outline, and, as might have been expected, very steep and rugged, being, in fact, a true Alp.

The lowest point is at Fourneau, close by the main route over Mont Cenis. From this valley, which is at an elevation of 1,096 mètres above the level of the sea, the mountain ascends rapidly 106 mètres, to the northern entrance to the tunnel, which is in a picturesque gorge in the valley. It then rises rapidly 348 mètres more, to Les Aysards, a cluster of chalets in the slope of the mountain, where is placed the first signal-station. The line then runs along the rugged slopes, and rises a further height of 102 mètres, immediately after which it drops down to the ravine in which rushes the Torrente del gran Vallon. After crossing this impetuous stream, it rapidly ascends a height of 741 mètres, till it reaches the station La Riond with a further ascent of 221 mètres. From this latter point it skirts the shattered slopes of a steep precipice to the Vallonet station with a rise of 306 mètres. The line then crosses the apex of the rocks, and at once rushes precipitously up to the Observatory, on the pinnacle-like summit, with a further rise of 75 mètres, this summit being 9,675 feet above the level of the sea, and 5,714 feet above the tunnel mouth at Fourneau. From this point the mountain descends with great rapidity over exceedingly rugged and broken ground, no less than 1,094 mètres at one swoop to the torrent of the Merovine, which flows down a deep valley. It once more rises 116 mètres, passing a wild and broken country, to the apex of a precipice at the Banda station, from which it again falls with a rapid drop of 457 mètres, to the southern mouth of the tunnel at Bardonnèche, close to the torrent of the Rochemolles.

The heights of some of the Alpine peaks in the immediate neighbourhood of the course of the axis of the tunnel, reach the following elevations, expressed in English feet:—

	Feet.
Mont Rond	8,057
Mont Pelouse	10,384
Punta di Frejus	9,761
Bellcoil	7,886
Chabrière	7,358

So that the summit of the highest Alp, Mont Pelouse, near the line of tunnel, is 10,393 feet above the level of the sea, being thus considerably above the limit of perpetual snow, and nearly twice the height of the great road over Mont Cenis.

The various sectional heights of the axis of the tunnel, as traced along the summit of the mountain, and of the various signal stations, placed along the course of the line, may be briefly tabulated as under; commencing from the north or French side, and passing over the summit to the Italian side, the heights being in mètres taken from the longitudinal section:—

0. Entrance to the tunnel	1202·82
1. Signal station on line	1550·04
2. Ditto	1659·35
3. Ditto	2847·51
4. Ditto	2374·96
5. Ditto	2375·66
6. Ditto	2568·89
7. Ditto	2574·03
8. Ditto	2547·47
9. Ditto	2874·68
10. Ditto	2874·94
11. The summit	2949·16
12. Signal station	2426·66
13. Ditto	1971·98
14. Ditto	1959·86
15. Ditto	1792·55
16. Exit of tunnel, Bardonnèche	1335·58

Besides these signal stations and observatories, there are others on the mountains facing the entrance of the tunnel, three on the French and two on the Italian side, all being well-built structures of great solidity.

The highest summit of the mountain under which the tunnel passes is 9675·71 English feet above the sea level.

The preparatory works were of vast magnitude, including the construction of new and solid roads, of vaulted canals, bridges, magazines, offices, workshops, forges, furnaces, and machinery driven by a turbine of 12-horse power; extensive reservoirs,—some underground, to shelter them from the frost, high up on the mountain side; residences for the men, offices for engineers; being in fact a complete and perfect establishment of great extent and variety of detail, both at Bardonnèche, Modane, and Fourneau.

As the excavation of the tunnel was not to be effected by manual labour,—nor indeed by steam,—other means had to be adopted, and new machinery devised for the purpose. The power of water,—so plentifully supplied by the Alpine snow and rain, was the great motive power determined upon, as being the most economical and manageable for such a mountainous locality: hence new hydraulic and pneumatic machinery had to be invented, tested, varied, and improved. Water was the generating power, but the perforating machinery was to be driven by the action of *compressed air*,—the *modus operandi* of which had to be determined, and put to the test of actual work and experiment, on a grand scale, before the real labour of the excavation began.

Besides driving the perforating tools, the same air had to ventilate the tunnel, and keep it in a fit state for respiration; for it will be seen, that a tunnel *without shafts*, more than 7½ miles long, could not be ventilated by the ordinary method usually employed for such purposes.

Passengers traversing Mont Cenis pass through the little Alpine town of Modane, where are numerous works, connected with the tunnel; and also the hamlet of Fourneau, where again are seen extensive establishments of an appearance and character little dreamt of by travellers in a wild and romantic pass like this. The mass of pipes and tubes for air and water look quite bewildering—looming like the apparatus of some Titanic distillery.

It seems incredible to the passing stranger that this pile of pipes, tubes, tanks, and reservoirs, are employed for the purpose of boring into the bowels of an Alpine mountain, of hard and solid rock, without the aid of steam, and little help from manual labour. Black mail is levied on wind and water,—arrested in their course, they are compelled to work their passage; seized upon by engineers, and reduced to subjection, they are imprisoned in iron pipes and tubes, and only liberated to go where they list, after performing their allotted labour.

Although in June, 1858, and September, 1859, arrangements were made for procuring the necessary materials for compressing the air, and for the perforating machinery, it was not till November, 1860, that five of the machines were really erected and put to work at the tunnel at Bardonnèche.

A novel machine for perforating hard rock was not easily brought to perfection; it required a long and elaborate series of practical working experiments, and numerous modifications in detail, before being considered fit for the real work it had to do.

It required to be of sufficient power to do the work with ease and precision, to be of such size and weight as to be easily managed by one or two men, and so strong and simple in form and construction as to avoid the necessity of frequent stoppage and repair; for the work such a machine was required to do should be continuous night and day as far as possible.

It appears from the report of the engineers, that the time the machines were actually at work during the year 1861 at Bardonnèche, was only 209 clear days, with an actual advance of the whole front of the excavation of 170 54 mètres, which only gives a daily progress of 0·81 mètres.

At the same place during 1862, there appears to have been 325 full working days, with an actual advance of the tunnel of 380 mètres, which gives for the daily working progress of the complete tunnel 1·17 mètres. At the northern end of the tunnel at Modane for the same year, 1862, the advance is stated to have been at the rate of one mètre per diem.

Since 380 mètres were actually advanced in 325 days at Bardonnèche, this will give for the entire year, if in full operation at the same rate, an advance of 462 mètres, and if we add the 365 mètres for the progress at Modane during the same period, the total progress forward at both ends for an entire year will be 827 mètres,—so that at this rate of working it will require 14½ years to complete the excavation, and, taking all the circumstances of the case into consideration, it is doubtful if the tunnel can be bored through in a less period of time.

The total estimated quantity of rock to be excavated is 600,000 cubic mètres, or about 784,666 cubic yards. As the tunnel is 13,354 yards long, this will give for the lineal yard forward, and for the whole face of the tunnel to be removed, nearly 58 cubic yards. At the average advance of 1·17 mètres per day as above stated, this will give a daily removal of 73½ yards cube; and if both faces are worked at the same progressive rate, it will yield 147 cubic yards of daily excavation for the joint work of all the boring machines in operation.

This supposes continuous working, which, however, is scarcely possible, for there is always time required to charge the bore holes, fire the blast, break down the shattered rock, and remove the whole of the loosened material out of the tunnel.

There will also be a sensible loss of time occasioned by prolonging the pipes and tubes for the compressed air, to work the machines, for the water and gas pipes; for all these must keep pace with, and follow up the advance of the perforating machines in the tunnel, as well as the timbers and rails for carrying the machines, and other indispensable work of the kind, all of which must advance simultaneously.

The rock in which the excavation is at present being made is of a quality exceedingly difficult to work, having what the engineers have called an "infelicitous stratification," with great diversity of texture, which has proved very trying to the perforators. The rock is a crystallised calcareous schist, very much broken and contorted; being interspered in almost every direction with large masses of pure quartz, in veins of variable dimensions, straggling irregularly through the general body of the rock.

It has proved difficult to work in a diversified material of this character from the unequal resistance presented to the perforators by the calcareous schist and quartz, it not unfrequently happening that the chisels have to be turned from their proper direction, through meeting with a block of quartz, which of course leads to loss of time.

The production of compressed air at Bardonnèche for the year 1862 amounted to 117,000 mètres cube per month, with an actual pressure of six atmospheres; the entire year giving the immense amount of 1,404,000 cubic mètres; which is equivalent to a volume of air at its ordinary pressure of 8,424,000 mètres cube, or 11,024,000 cubic yards English.

It was ascertained by experiment that each perforator working at its ordinary rate consumed three litres of compressed air per second, so that the nine machines expended 27 litres per second, which is at the rate of 97 mètres cube per hour, equal to a consumption of about 3,425 cubic feet English, of air, compressed to a pressure of six atmospheres, or in round numbers, with a working force of 90lb. per square inch of surface.

When the air so compressed to six atmospheres is liberated in the tunnel, and expands to its normal state of pressure, it is found to absorb nearly the same quantity of heat which it gave out in the act of compression. By this absorption of heat from the air in the tunnel, the temperature which has been heated by the workmen, the lamps, and gas, is considerably lowered, thus ren-

dering it more cool, fresh, and suitable for respiration.

At Bardonnèche, during the 325 useful working days, the number of holes bored to a depth from 0·75 to 0·80 mètres amounted to the number of 45,751; the number of chisels employed was 72,538; the gunpowder consumed weighed 40,735 lb.; and the length of match for firing the mines amounted to 76,510 mètres.

In 1861 the machines advanced the tunnel 170 mètres, by boring 20,000 holes; in 1862 they bored 46,000, besides 6,000 made during the working experiments; amounting altogether to 72,000 holes, divided amongst 80 perforators: from this it results as a mean, that 900 holes were drilled by each of the perforators.

The eight machines worked ten perforators, and made 80 holes in 7 hours 39 minutes, so that each machine took 7 hours 39 minutes to bore 10 holes, or three quarters of an hour for each mine hole. In three quarters of an hour each machine worked at the rate of 3 blows per second, making 8,100 evolutions complete, thus giving 8,100 blows of the chisel to execute one hole. The 900 holes bored on an average as above stated, gives for each perforator $8,100 \times 900 = 7,290,000$ blows, worked by air with a percussive force of 90 kilogrammes, or about 197 lb. for each blow.

By way of comparison of cost, it may be observed that the Bletchingly tunnel on the South-Eastern Railway, in blue clay, shale, and sand, cost at the rate of 71*l.* 18s. 7d. per yard forward; the Saltwood tunnel, on the same line, 118*l.*; the Kilsby tunnel, on the London and Birmingham, 125*l.*; and the Clay Cross, on the Midland Railway, 100*l.* per yard forward. The estimated cost of the *Mont Cenis* tunnel is stated to be within the limit of "*quattro mila lire al metro currente*," which will be at about the rate of 166*l.* per lineal yard: assuming this to be near the mark, the entire tunnel will cost at this rate, upwards of two millions sterling. One item of cost in this tunnel which must not be overlooked, is the heavy amount of transport, the length from the middle of the tunnel to either mouth being upwards of three miles and a half. The tunnel is for a double line of rails.

The wear and tear of the perforating machinery has been found greater than was expected; for the hard, sharp-cutting particles of dust from the drilled quartz and other rocks, causes constant and considerable damage to the machines. This will be readily imagined when the number of blows, pushes, and revolutions made by the boring tools are enumerated. To bore eight holes $2\frac{3}{4}$ feet deep in the rock, when of average working quality, the motory cylinder completes 57,600 revolutions; the striker, or driving piston, 57,600 blows, each with a percussive force of 90 kilos.; and the chisels make the same number of turns or twists; so that, to bore these holes to the above depth, a force of 11,347,200 lb. is expended, or 1,418,400 lb. for each hole; which will be quite sufficient to illustrate the cause of the wearing of the machines when exposed to quartz dust and effecting this amount of work.

As a matter of mere curiosity, to show the magnitude and extent of the various operations to be performed and labour required, it may be stated that, if the above rates of working should be maintained, the number of holes necessary to be bored to get through the whole tunnel will exceed 1,599,709. The total depth of all these holes, when bored, will amount to 1,279,767 lineal mètres, or 4,265,890 feet, which is 105 times longer than the entire length of tunnel to be excavated. The number of blows required to be struck by the perforators to do this work will reach the high figure of 12,957,642,900; while the total magnitude of all the percussive blows showered on the chisels will amount to no less than 2,551,957,651,300 lb. English; so that each cubic mètre of rock extracted will require a percussive power of 4,253,262 lb. to force it from its place, as applied at the head of the boring chisels, to bore the holes alone, to which must be added the explosive force of the gunpowder when the charged hole is fired.

It may be explained briefly, that the tunnel for its whole width of face is not attacked at once, a "gullet," or heading is driven considerably in advance of the completed work. This small gallery is rather more than 11 feet wide, and $7\frac{1}{2}$ feet high, and square in form. A line of rails is laid nearly the whole length of this gallery of usual gauge, to communicate with the line in the main tunnel; beside this there is a line of rails of lesser gauge for the small *trollies*, used to convey the broken rocks from the head of the gallery to the common trucks. In general the machines which attack the front of this heading, are armed with nine or ten perforators,—some acting directly in the face, others diverging to the right and left, and thus carry on the borings in the gullet, till all the holes are ready for their charge of powder. Thirty-seven men and boys are required to attend to the machines and other matters in connexion with them.

The work of the main tunnel follows up the small gallery, which is progressively widened to the extent and form required for the full section of the complete excavation. It has been estimated from data obtained by actual working of the machines, that the tunnel may possibly be excavated in fifteen years, but it appears that twenty years is the time calculated upon by the engineers engaged in the conduct of the work. The limit assigned for the completion of the tunnel in the convention agreed between the French and Italian Governments, is twenty-five years. It is, however, a work requiring time, money, and patience; it cannot be hurried, and must look to completion from steady and unremitting labour, day and night, without ceasing. It is a great and noble work, boldly and skilfully begun. Let us, therefore, indulge the pleasing hope that it will be brought to a satisfactory conclusion, and open a passage for the iron horse through the grand barrier of the Alps.

JOSEPH LOCKWOOD.

THE PRESENT REQUIREMENTS OF ARCHITECTURE IN ORDER TO A SUCCESSFUL COMPETITION WITH ANTIQUITY.*

AT the beginning of the present century, and for some time previous, our cathedrals, and the great works of antiquity, were placed amongst the "Seven Wonders," without a thought of any future rivalry. Now, however, such immense strides of art and engineering are made, that the time has arrived when it ill becomes us to strike our colours ignobly to a less tutored age. The institution of this and like societies having for its object the promotion of architecture, we have to expand the narrow views that are taken. Nor are we to yield to the feeble imputations of absurdity when we propose to emulate the successes of former times. Progress is the rule of life; and it behoves us, gigantic as the task may be, to strive to come up to, and to excel, those who as yet leave us so far behind.

To improve the system in the practical working, and to increase the encouragement, are the two points to be attended to. With this view it is important, in our efforts for the advancement of architecture, to inquire into the secret of its success when it most flourished: we therefore propose to consider the advantages of former periods, with suggestions for the recovering of them. We shall confine ourselves to the Gothic style; and intend to corroborate our remarks with criticisms upon some examples both ancient and modern. This latter part of our paper must form a sequel at a bi-monthly meeting, as time and circumstances forbid its being so extended on the present occasion. The ancient remains which we possess are chiefly ecclesiastical, and they show that an almost incredible amount of interest in the art was sustained for some five centuries; after which the interest subsided, and the indigenous style was abandoned for such as was more or less borrowed and wretchedly insipid in comparison. Now we ask, What was it that kept up this great architectural movement and secured so great success? And what past advantages, or equivalents, can we regain?

We will name for consideration five things, which we imagine mainly contributed:—1. The demand for cathedral and abbey and other churches of great splendour. 2. The fascination of Gothic design. 3. Seclusion allowing concentration of the architect's whole mind upon his work. 4. No more being carried out under one individual than could receive unlimited attention. 5. Collective help; valuable suggestions in design being accepted by the chief architect from ecclesiastics or others, including the trained body of free masons; and not rejected as officious; the religious and artistic object overriding every other interest. We venture to say it is not that our professional men are inferior in taste and skill to their forefathers: it is owing to a change in the system and patronage of art, that such prodigious fruits do not now appear; and it devolves upon us to make every effort to recover as much as is practicable of the facilities and helps which we have lost.

1. As to ecclesiastical demand,—which we mention in the first place,—no doubt the feudal system, united with some conscientious feeling of duty on the part of the lords of the soil, was favourable to pecuniary supplies, whilst peculiarities in religious ceremonies and religious life rendered imposing edifices a matter of all-absorbing consideration; and we do not expect, nor do we wish for, a return of such times,—as one of our poets has it in an exquisite effusion on the ruins of Kendal Castle,"—

> "Times of rude faith, and ruder men—
> God grant they never may come again!"

But we hope to succeed without these auspices. A sense of what the houses of God ought to be in priority over the dwellings of men is all that is required, and that is reviving amongst us: instances are not entirely wanting, where the mansions, or superb "ceiled houses" as the lament of the prophet expresses it, are surpassed, as they should be, by the costly character of the temple. To this quarter—the church—it is not only right still to look, but we are compelled to do so; for it is not sufficient, in the higher interests of architecture, that secular public buildings and domestic structures be required: the church is infinitely the best sphere; and until the erection of magnificent and gorgeous ecclesiastical edifices comes again into vogue, encouragement to architecture cannot recover its full proportions. We know it will be said,—having as a nation done with monastic establishments and gorgeous ceremonial, the scope for such grandeur is gone. Still, we demur to the inference, and we aver that it is not idle to contend for, at least, the erection of cathedrals of great magnificence. This we must insist upon, much as the contrary impression may prevail; and we can do so on principle, as well as in the interest of art. We recommend to be read Mr. Beresford Hope's "Cathedral of the Nineteenth Century." The notion is erroneous that our Protestant ritual is so precise and simple that it forbids altogether imposing processions: the inspired sentiment of the Hebrew psalmist teaches better. Much less can it be said that our principles are so ultra-puritan that the "sublime and beautiful" of the cathedral are incompatible with Anglican worship. What man having taste united with his piety ever found it to be so? Who would not deplore the loss of those noble buildings which we possess? Who would condemn the efforts expended on the modern Cathedral of St. Paul? Who would not like to see the insufficient ones of Manchester and Oxford exchanged for better? or, with the demanded extension of the episcopate, a corresponding provision for the highest solemnities of our religion in the new dioceses? The procession and the large gathering at an ordination, at visitation, or confirmation, or on any other great occasion, so much aided in effect by cathedral grandeur with its concomitant sublime tones of music, are not empty pomp pandering to a pseudo-religious feeling, but legitimately impress the mind and heart that the spiritual benefit may be the more lasting. Nor, independently of this, vacant space in the cathedral a waste, as we have it objected. The nave as a spacious avenue most effective for solemnity: the house of God naturally symbolizes heaven, the dwelling-place of the Infinite; and is not necessarily a mere pa for a congregation. The influence of immensity is felt to be not a little potent, and that even in the ordinary services. Witness the confessions of those great men, Milton and Robert Hall, which even their unecclesiastical spirits were constrained to give utterance. The former, referring to cathedral architecture with the "pealing organ," has the glowing lines,—

> "Dissolve me into ecstacies,
> And bring all heav'n before mine eyes."

And the latter remarked that "he could not enter York Minster without the sublimest and most d vout imaginations pouring into his mind." Equally fallacious is the objection, that higher claims would have their support diverted. Our ide may seem large to those who are not prepar for the demand we make; and they may be great distant from realization; but it is little mo than a dream of despondency, arising out of t niggard spirit in honouring our Great Creat that at present represses noble aspiratio England's elder university rests content with provisional cathedral!—an interesting antiqui but a priory fragment, and little better than village church. Could we but stir up the peo to it, and combine in a new one at Oxford t continental grandeur with the English su riorities—the high vault of Amiens, with t higher lantern, the spacious transept, and "long-drawn aisle" of York,—it would produc

* By Mr. Vincent Wing, of Melton Mowbray. Read at meeting of the Northamptonshire Architectural Society.

consciousness of national advance and universal congratulation. Nor is there occasion for despair: individuals are found now whose offerings to church architecture amount to the hundred thousand; and, with the rapid increase of the country's wealth, it is but reasonable to bespeak this standing acknowledgment and honour to the Giver of our substance. Such becoming employment of the highest class of talent would go far to guarantee to architecture the culmination to be aimed at; for edifices of transcendant magnificence are necessarily very many years in hand, and their erection would furnish what the art most needs; namely, an enduring field for its highest cultivation. On the contrary, if cathedral building is to be passed off as visionary, it is equivalent to quitting in despair: the very sphere required being abandoned, antiquity will only mock the modern architect's attempt at rivalry. In the promotion of architecture, then, our views must be expanded in reference to the church: the church must not be left, as it is, in dwarfed proportions, but partake of the general progress. We ought no longer to allow the huge tavern to be looking down on the steeples of our churches. And we hesitate not to say,—If our attainments in the art are to equal those of the ancients, if we are to resuscitate its bygone splendour, and bequeath to far-off generations equal monuments of our times, magnificent cathedrals and churches must, as formerly, furnish the leading encouragement. To this then it behoves us to stir up the people. We have the superiority in wealth, in intelligence, in mechanical power, and in advantages generally, together with purer inducements; why are we not, in this chief sphere, as in others, aroused to surpass our less favoured predecessors?

2. The next thing we have to allude to is, the fascination experienced by those who designed the structures of the Middle Ages. The extreme pleasure afforded to them is seen unquestionably in the effects. And on this it is unnecessary to dwell; for we doubt not that it will be felt again in a similar degree, if the unlimited opportunities of indulging it return. The sphere itself has no bounds: if the seven notes in music are found inexhaustible, the combinations in Gothic art must be as much so. Be it that a peculiar charm would accompany when all was new; yet, notwithstanding, if the means and demand be presented, the gifted practitioner, finding no limit to his encouragement, will have the same fascination in design as formerly, and revel in a luxury that will never satiate. Those only who have a true taste for it know its untiring interest. As far as the pleasure in the work is essential in order to recover the success of former times, all is assuring, provided that equal munificence can be called forth.

3. We have in the third place to consider, that formerly the whole mind of the man of genius was, in a manner, concentrated unremittingly on his creations. We may imagine how some Peter Lightfoot, or cloistered monk, would pursue uninterruptedly his avocation, as if he lived only to beautify his abbey church; or the æsthetic brilliancy that would be brought to bear from some archbishop devoted to the work, as William de Melton, it may be, during the rise and progress of the nave of York Minster. In this respect past advantages are not to be recovered, for we cannot ask for such seclusion again; but we submit the question,—Can we in our great works, upon the adoption of a more perfect practice and study, obtain its equivalent? If less were undertaken in order that increased attention might be given, possibly equal excellence in design might be attained to; but the difficulty is in the compensation, which must be so regulated as to admit of the required application.

4. This brings us, in the fourth place, to inquire more particularly into the system of practice in the olden time, which gave a circumscribed and a more fixed sphere of labour to the responsible architect. Upon this somewhat obscure subject we cannot enter without first briefly referring to an institution which has its bearing on more than one point before us: we mean Freemasonry; not in the form it has existed in since its revival at the beginning of the seventeenth century, but in its Mediæval system. Much secrecy and mystery attended it, which partly accounts for the obscurity in which history leaves us as to architects and their operations. We know, however, that from a very early date there was an organised fraternity of masons, who, from travelling and observation, as well as practice, gained intelligence, and by well-devised plans, communicated the benefit to their whole body as far as practicable; the members constituting an order, partly religious, in some sort, and partly professional, with one object and interest in common. The importance which architecture then possessed as an art can scarcely be overrated: for which reason the organisation was fostered by the clergy; the rearing of religious structures was allowed to be monopolized by the freemasons; and it is a fact that ecclesiastics were frequently *associated*; which circumstances render more intelligible the zeal of the masons, both in accumulating, and in confining to themselves, the knowledge of their art. It is also evident, from the curious correspondence in the details of work, that the organisation was very complete; and, as it is to be inferred from the remains of structures of the later period of the Roman empire, from a universal similarity of arrangement, that there was a central control, the same principle may have been transferred from Roman usage. The silence of history leaves us very much to conjecture concerning the main agents in the erection of our ancient edifices. The rearing of them, as a trade, would be in the hands of the freemasons (that name implying workers in freestone, or *freestone masons*), and much would depend on the wardens, who were the foremen of parties of ten of them, and upon the masters; but in a great undertaking some presiding man of genius, whose skill alone qualified him, must have had the chief control. Priests possessing a taste for it were not only associated in freemasonry, but readily initiated; and from that class sometimes would arise the pre-eminent architect. Architectural ability, indeed, seems to have worked its way to this position by association with, or development amongst, the freemasons. With the mysteries and emblems that have come down through this channel, even from the Egyptians and Grecians, our inquiry has no concern; but it is material to note that the secrets of the masonic art, whilst confined to themselves, were disseminated unreservedly amongst that body. Selfish ambition and jealousy would thereby be obviated: every man of taste could enter the association; and thereupon his suggestions became the common stock of the fraternity, available to the architect, who would be associated with them in his labours. In proceeding to consider the limited sphere of the chief architect, we have to note how originality in design was prized as a principal item of merit. For, in contemplating the extraordinary productions of the Middle Ages in the better period, one is struck with the variety and the prolific inventions. How diverse is York Cathedral from Lincoln, for example: how unlike are they both to Ely; and so on to Salisbury, Wells, and almost all others. Now this indicates as many chief architects as varieties, and the sphere of labour accordingly limited. It would be an historical problem to find the same architect to have been the designer of many cathedrals: rather was he engaged only for what he could entirely devote himself to. And, unless similar advantages can be secured, it is vain to look for equal originality and beauty in modern productions. Is it possible, then, we are tempted to ask, in any way to bring about a change in the present system? To apportion in some degree, for instance, to leading architects what is more strictly design only; relieving them of much of the constructional responsibilities, and giving such compensation as would command their time more exclusively for the important part devolving upon them? This is a question which, we are aware, the profession only are competent to grapple with; but as those great attainments to which we aspire seem in some measure dependant upon it, we shall not be out of place in pressing it on public attention. We conceive such a change is not altogether impracticable. Progress has, in the present century, completed a separation of the labours of the architect from those of the builder. A diversion has been made, too, in favour of the civil engineer; and we may suppose that a further subdivision of labour in the highest sphere is within the range of possibility. Or we may ask the question,—Can the labours of leading men in any other way be lessened? At present any one whose brilliant attainments have raised him to eminence has his reward in a killing amount of work, whereby one great genius, at least, has already fallen a victim. Only the same percentage is paid as to the inexperienced. How much better would justice be done on both sides if, instead of advantage being obtained by the ablest men in the extent of their employment, it were given in increased percentage? This might secure the necessary limitation of labour, and, therewith, more satisfactory results. It must be evident that they whose works are to endure in a manner for all time,—being ecclesiastical and national, or of the first class,—can only receive and do justice when the opportunity of sufficient application is secured to them. Unlimited application carried the day formerly; and without it equal success is not attainable. In a small way, France seems to be taking the lead in this matter. There "some architects having private property of their own, only make use of their professional acquirements in the carrying out of the design of one or more tombs, either for their friends or for some great personage; a tomb being regarded by French architects as the highest possible ideal of the art." It is, we apprehend, mainly a question of large and adequate compensation. If so, to obtain it, we must look to a greater appreciation of design. This will advance in proportion as a general taste is cultivated; and whilst the effect of such cultivation will be also a corresponding improvement in the art, success in design will attract attention and reciprocally encourage the cultivation of taste. Then, if the movement be fairly commenced, such is the disposition of the various influences to run in the same current, that we need not despair of a revolution that will eventually advance architecture again to its supremacy in the school of arts; and the results will leave vestiges which will command for us an honourable position in the estimate of succeeding generations. The munificent offer for designs for the Liverpool Exchange may be regarded as a good experiment, and encourages what we have ventured to advocate.

5.—Lastly, it has been intimated that in Mediæval practice help was acceptable to the architect from any quarter. There must have been encouragement to, and ingenuousness in receiving suggestions. At all events, the chief architect would accept them from his ecclesiastical employer, whether an associated mason or not, in many cases; and in others, where the ecclesiastic might be chief, he would be on terms of candid partnership with his masons. In present circumstances, the amateur part of our question is difficult to be brought to bear, and delicate to broach; but it is necessarily connected with the subject, for the part borne by the amateur in the old system is a leading feature. That formerly Wykeham and others, not professed architects, had their fingers in work which is now held in such rapturous admiration can scarcely be denied. Alan de Walsingham, the sacrist at Ely, became architect of the cathedral; and, after the fall of its centre, gave it its culminating grandeur. A bishop of Noyon was originally an artisan, and rose to that eminence from his skill as a goldsmith. Other examples might be referred to, but these are sufficient to show how in those days the interests of the church, excluding considerations of personal fame, gave to skill and taste an open door. Assistance then was accepted wherever merit recommended it, and taste was invited in whatever brain it existed; appetite for beauty, together with religious zeal, having sway over every other feeling. The bishop, with the clergy around him, and a troop of freemasons, would form a college of artists; eager, not only to devise, but to obtain from any source whatever what would tend to the adornment and splendour their cathedral. It is true that circumstances are now very different: we live not in a recluse, but in a mercantile age, and the trade element is perhaps unavoidably too preponderating to give free course to the practice of art. We shall venture to say, however, that the crudeness which attends the amateur need not make his suggestions contraband now any more than formerly; and recovering past advantages, does it not enter into the question, what auxiliary service he can be useful for? Can this suggestive element, if we may call it so, any way re-enter, and the amateur again take his part?—or, in other words, can we have a benefit by adopting some plan for taking advantage of the drawings of non-professional persons, when anything new and valuable occurs to them. If institutions for exhibiting and rewarding designs were candidly open to amateurs in competition with others; whilst every advantage would still remain with the educated architect, exceptionally an amateur might be brought forward, and, not

"Born to blush unseen,"

quit his false position and join the profession. Taste has its occasional inspirations in the rough, and sometimes of the richest quality, possibly, without the pale of professional cultivation. Provided amateurs could,—not by botching on their own account, but in some legitimate way,—be made useful, it would moreover tend as much as anything to that general diffusion of taste, which is the only atmosphere in which the profession can vitally prosper. As a polite accomplishment, architecture to some extent (we refer to artistic

design only), admits of private pursuit like other fine arts; and it is important to remark, that the public, since they have the patronage, should be adequately educated that they may better exercise it. The Mediæval system, like the ocean, received the stream from every channel; and if architecture for its own sake is to be promoted,—if a general taste is to be fully cultivated, and the attainments in this age rival the past,—whilst the responsibilities rest with the profession, the practical study of the art, it would seem, should be open to all who are capable of it; and, in a subordinate form, non-professional help again become tributary.

Upon reviewing the circumstances that favoured architecture in times gone by, it must be owned that the difficulties of competing with antiquity are great. The advantages grasped by the art were more than peculiar—human faculty was then in a manner sold to it: in the *dark ages* we see genius arbitrarily extinguished save in this one phase; and the whole light of the intellectual firmament at that time may be regarded as absorbed from others to be concentrated on this subject. We can point to a hundred years, in which about a hundred abbey and cathedral churches of first-class character were erected in this country, when it possessed but a tithe of the present population and means. Now, the modest demand for only one such cathedral to recommence with may be too much to be realized; and, if so, puny in comparison is the revival of Gothic architecture. Without going to Mediæval extremes, to impart the necessary feeling is no small matter; for not the despotic potentate and feudal lords, nor a paramount hierarchy, but a whole people have to be moved to do themselves credit. Yet, notwithstanding, the present age having the ability demanded, with far greater wealth, greater facilities for travelling, and various better helps for acquiring intelligence and proficiency, we ought not to succumb to the past. And if taste received only the utmost rational fostering and encouragement, it is not presumptuous to say that, instead of being behind, we might hope to distance our forefathers in the race of architectural development.

THE CURRENT OF ARCHITECTURE.*

CHARTS to exhibit the chronological sequence of styles, and to present at a glance, information as to what different styles were contemporary, naturally suggest themselves to most searchers and expounders of the history of architecture. Charts of general history, and even of the progress of literature, and of painting, have long been in use; though more advantage might be derived from such appliances in teaching. The Germans have done much in the way of compilation of these tables. One of the most instructive, and best known forms, which we believe originated in Germany, is that of "the Stream of History," wherein the ruling nationalities are represented in the form of parallel rivers, or streams; which absorb, flow into, or branch out of one another, after the same manner as the nations became absorbed or branched out. Mr. Huggins has been the first to apply this idea to the illustration of the history of architecture. In connexion with a synoptical table of the styles which we find in the volume which is before us, accompanying the chart, and the chapters themselves of the volume (some of which have before appeared), the chart will form the basis of many future improvements in the method of illustration, and of much more exact appreciation of the contemporary facts of architecture, than can now be said to exist. Existing publications in the form of chronological charts of architecture, are confined to single countries, or to some few centuries of the succession of styles; and the true teaching of architectural history does not come forth in them at all. Architectural history, however, altogether, has only lately been properly attended to by English writers; and the discovery of the fact that comprehensive study of such history has an immediate bearing upon the production of art of the future, may be said to have been made during the period of the existence of, if not also by the help of, our journal. Mr. Huggins owes of course something to the labours of writers like Mr. Fergusson; and he acknowledges all assistance of this kind; but he has certainly contributed to the elucidation and exposition of the facts, and to the placing in the proper light the question which forms the heading of one of his last chapters, "The Style of the Future."

Mr. Huggins's disposition of the styles is a compromise between the chronological and the geographical. In the chart, "Mexican" and "Peruvian" appear as distinct streams, to the extreme left, or west; whilst "Buddhist" and "Chinese" are as similar streams to the right, or east; though research may eventually show connexions, in the case of these four styles, with members of the central group, which the chart does not attempt to indicate. The great styles of Europe, Asia, and Africa, are as nearly as possible, in their proper places, the Gothics being westward, and the Byzantines and their offspring (the Saracenics), eastward, of the central classical trunk. In the demonstration of the line leading on to the later Italian styles, from the earlier, there is some omission of the thin stream of pure Roman which was never altogether dry in Rome, whilst a stream of Romanesque directly to the Venetian-Italian, is the only apparent connexion; and the styles of one and the same country, Venetia, must be looked for in two different positions, geographically, of the chart. Moreover, the derivation by the Greek style, of Ionic elements from the Assyrian, noted in the volume, appears to be ignored in the chart. Further, the tints of colour, which are changed as the streams flow, or ramify, do not seem to us quite what the author intended. These are features of the chart, showing the difficulty of the task, for which we are, nevertheless, indebted as having been to some extent accomplished.

The influences operating in the generation of styles, or during their transition into other forms, the author observes, proceed "at one time from a neighbouring style; at another, from the spirit of a new religion; at a third, from the energies of a new race." Some of the rays of influence, he indicates on the chart as proceeding from orbs of Christianity, Islamism, National Characteristics of Teutonic tribes, and Saracenic art. The first of these generated the Christian Romanesque out of the Roman; the second, the Persian, Indian, and other Saracenics, out of the Byzantine and Sassanian (the Sassanian being the freshened stream of the Persian-Assyrian, with Roman confluents), and also generated the Turkish Saracenic offshoot from the Byzantine,—although "the later modifications of Arabian architecture" are pointed out as "owing to the introduction into the Mahommedan community of nations, of new races—Seljukian and Ottoman Turks, Pathan and Mogul Tartars, &c.",—the Teutonic characteristics generated the Lombardic and Rhenish, the Frankish, Burgundian, and Norman, the Anglo-Saxon, and the Spanish Early Gothics; and the Saracenic art, through the Crusades, produced pointedness.

In the volume, the chapter on Egyptian architecture, and the remarks on the same style towards the conclusion of the book, show full appreciation of the style. In the chapter on Christian Romanesque, it is noted that the Jewish synagogues, being places not only for worship, but, like the Pagan basilicas, for holding local courts of justice, would not be without influence upon the form of the first Christian churches. In one of the concluding chapters, the author names some of the styles, native or adopted, which he rightly considers would deserve to be placed in a representation of the "course and current of architecture," did we know more about them. Such are the styles of the architecture of the Phœnicians, and the Lydians; and of the inhabitants of Pergamus, Galatia, and Cappadocia; of ancient Iberia, and even of Britain. But he believes a review of the ground traversed in his volume, will show that the most potent influences brought to bear on the career of architecture, are those of religion and race; and that "climate, local scenery, and geological structure," only give rise to subsidiary varieties. And he says:—

"Difference of race, like difference of religion, has divided the styles of the world into groups, so that they have a general ethnographic arrangement as well as a theological, which may be expressed thus from West to East:—Teutonic, Celtic, Slavonic, Arabian, Tartar; the Teutonic branches being those of the Gothic styles; the Celtic of the Romanesque; the Slavonic of the Byzantine; the Arabian of the earlier varieties and developments of the Saracenic; the Tartar of the later."

The generation, from the Roman stem, of the succeeding styles, was "almost entirely the achievement of the influences of religion and race." Next to the agency of religion and race in the development of styles, is the influence of styles upon one another. But to these influences, is to be added that of events involving changes in political and social condition, or literary or scientific status. It would appear that our author ascribes less importance to *materials* available for buildings than sometimes has been ascribed. Yet this point deserves some attention, even for the larger divisions in classification. The early Romanesques, probably derived a distinctive character, as generally supposed, from the possession of those materials of Roman buildings which were so largely made use of.

In the chapter on the Style of the Future, before adverted to, there is much matter which is accordant with our own expressed views. Beyond this, the author does much to show what may be derived of new art, from all the styles, whilst preserving a general unity. Such unity he does not look for by proceeding from the style of buildings which, to him, he says, always look like reproductions of Mediæval structures; but from the classical columnar architecture, for which, however, he indicates numerous additions to it, elements of change, and freshness. He distinguishes between the condemnation of windows behind the columns of a portico, and the tendency once manifested towards dispensing with them altogether in buildings of classical character, whereby many atmospheric effects were lost. Amongst his suggestions, are those of modifications in the Corinthian, to which order he would give columns for interiors of much more attenuated proportions than those of the ancient examples, and for exteriors more massive character, as required by our climate; whilst the capitals he would compose less thickly of foliage, as to the covering of the bell, in order that the supporting office of the member might not seem interfered with. He would derive numerous suggestions for the decoration of supporting members, and other structural parts of architecture, from the Egyptian and Indian, as well as other styles. He takes the same hopeful views, as we have, of the capabilities of our race, or opposed to those who "forget that the blood of a score of different tribes of mankind is flowing in our veins as well as the Teutonic," and so concludes what (looking over some few errors of the press, which should not have been allowed to remain,) we must regard as, with the chart, a well-timed and useful contribution to the popular knowledge of architecture, its examples and history, and to the future progress of architecture, the art.

* "A Chart of the History of Architecture, showing under the Similitude of Streams, the Rise, Chronological Sequence, Relations and Periods of the various known Styles of all Countries and Ages." By Samuel Huggins, Architect. London: Printed in Chromo-Lithography by Day & Son, and published by them, and by John Weale. April, 1863.

"The Course and Current of Architecture: being an historical Account of the Origin, Successive and Simultaneous Developments, Relations, Periods, and Characteristics of its various known Styles." By Samuel Huggins. Designed as a Companion to his "Chart of the History of Architecture."

WOODEN BRIDGES BY THE UNITED STATES ARMY.

MR. RUSSELL WEST, writing from Philadelphia, gives us particulars of some of the railroad bridges which have been rebuilt by the United States army.

The truss frames of the bridge which carried the Richmond, Fredericksburg, and Potomac railroad over the Potomac creek having been burned by the Confederates, the soldiers of General M'Dowell's army, in May, 1862, under the direction of Brig. Gen. Hanpt, constructed a trestle work 400 feet long and 80 feet high, which has for more than a year carried daily from ten to twenty heavy railway trains, and has been frequently and severely tried by freshets in the river. It was built in nine days, chiefly of round sticks cut from the woods in the vicinity, and not even divested of bark. It is four stories in height,—one of crib-work and three of trestles. The legs of the trestles are poles from 9 inches to 12 inches in diameter, and about 25 feet long, the ends dowelled together with 2-inch wooden pins. The diagonal braces are also round poles, very little sawed timber being used in the structure. The bridge over the Rappahannock, 600 feet long and 65 feet high, was rebuilt in a similar manner by the same army.

Gen. Hanpt is a civil engineer, and was for many years in the service of his native state, Pennsylvania.

A VOICE FROM GENEVA.

IN this ancient and beautiful city there has been a meeting of watchmakers and other manufacturers to consider the subject of Sunday labour and recreation. This meeting seems to have been attended by both the employers and the employed. On this occasion it was observed that Monday replaces Sunday for a number of workmen, but whilst Sunday rest is ordinarily given to the family, and suitable recreations, Monday has almost always a very different

character. It was wished that the public museums, libraries, public establishments, and divers collections, should be opened by degrees on Sundays after morning service. The objection that this would force the *employés* of these places to the exercise of their functions was argued, but it was said that this inconvenience would be small compared with the advantages to a whole population, and that it was very easy to insure to the *employés* sufficient rest by small administrative precautions. In suppressing a working day, the effective quantity of work accomplished is not diminished, because the man properly rested has ability to do more than he who has not had the necessary repose. England, where Sunday is better observed, sustains advantageously its place with the other countries of Europe. It appears that a great number of the manufacturers of this city have discussed this question amongst themselves, and tried to resolve it in a truly liberal spirit without the intercession of the State. The same problem has been brought before the French Senate, under a different form; in effect, nine inspectors-general, or engineers-in-chief, of bridges and roads, three generals, and eight architects of the city of Paris, and of the Government, solicited the intervention of the Senate to obtain the boon that work might be discontinued on Sundays in Government dockyards. It was mentioned that in consequence of the want of a weekly day of rest, a country which formerly furnished fine men for cavalry regiments, furnishes to-day infantry of but small stature; and that the want of Sunday's repose causes the need of a holiday on the Monday, in which the most part of the family cannot partake; and on these Mondays it is said "that a man may be seen, glass in hand, drinking, with shaking hand, the blood and tears of his wife and children. It is objected, it is true, that the wants of man are the same every day, therefore work ought to be carried on every day wherewith to serve these material wants. But England, who knows how to observe the Sunday, what does she make of this objection? She passes beyond it, convinced that she is quite right—that rest on Sunday can be but an element of prosperity for the family."

THE GENERAL HEALTH.

THE Registrar-General, in his last quarterly return, tells us that small-pox carried off 788 persons in London, or nearly nine daily; and scarlatina and diphtheria, 1,230. "Though the former disease carried off fewer persons than the latter," he says, "it was more powerful in inspiring the public mind with a salutary dread." He adds,—"It should not be overlooked that prophylactic measures are available against scarlatina as well as small-pox, and both maladies are subject to modification." Small-pox was not confined to London. "Its presence, which in some instances assumed a character of virulence, is announced by registrars in many and distant parts of the country." "Not only small-pox, but also measles and scarlatina, attacked the industrial populations both in Lancashire and Yorkshire."

The deaths in London show an increase; and in Lancashire and Cheshire, the districts which have suffered most from the recent distress, the increase is more considerable.

In London the deaths "rose from 15·230 and 15 695 in the June quarter of 1861-2, to 17·417 last quarter;" but in the north-western counties they rose from 17·576 and 18·017 to 19·467. In Oldham, Manchester, and Warrington, the increase in the last quarter on the mean mortality of the two previous seasons is 20 per cent., and in Chorlton and Wigan 25 and 24 per cent. Measles and other epidemics are spreading throughout these parts; and it "is probable that fewer deaths have been registered in many districts," owing to the emigration or removal of the inhabitants; for, doubtless many places are situate like Belmont, respecting which the Registrar writes, "that it is almost uninhabited, owing to the badness of trade;" and it must be regarded as a providential interposition in favour of the under-fed and under-clad workmen and their families, that the period embracing December and four succeeding months was distinguished by a higher temperature than any corresponding period since 1771.

Throughout the whole country the number of births has increased except in Lancashire and Cheshire, where they have decreased; and in that district the population is perishing by disease as surely as it is in the United States from the perils of war.

The distress in Lancashire and Cheshire is lessening: considerable numbers have emigrated, and it is satisfactory to note that the last report of the central executive relief committee mentions that a large number of ablebodied men included in those "out of work" have been enabled to find temporary employment in various out-door occupations; 4,718 operatives have left for New York and the colonies; and it is pleasing to find that wherever out-door employment has been provided by the local committees the operatives have become skilled in their new occupation. Their physical condition has been greatly improved; and there can be little doubt that the works about to be undertaken under the provisions of the recent Act, will largely contribute to an equally beneficial result.

SANITARY CONDITION OF LONDON DISTRICTS.

THE seventh annual report to the Vestry of St. James's, Westminster, has been made by the medical officer of health, Dr. Lankester, and printed. It relates to the year 1862. The total number of deaths was 727, being slightly in excess of the average of the last seven years, which was 718; but below the mortality of the previous year; thus on the whole representing a favourable state of health in the parish for 1862. The mortality of the Berwick-street division, the most over-crowded and poorest in the district, has never been so low any year of the last six as last year. This district has been most acted on by sanitary measures, and the utility of this action, as in so many other instances, thus seems to make itself manifest. Whilst in 1861 whooping-cough claimed the greatest number of victims amongst zymotic diseases, scarlatina carried off the greatest number in 1862. In no one year has any of these contagious forms of disease been so fatal as scarlet fever was last year. Of sixty-six cases twenty-nine occurred in the Berwick-street division, thus clearly showing that where the population is most overcrowded, there this disease is most deadly. Dr. Lankester recommends the vestry to use their influence with the magistrates to prevent the licensing of cowhouses altogether. The milk is unwholesome, the practice unhealthy, and property is deteriorated wherever cows are confined and crowded amongst human beings as they are in London; and besides, an abundance of good wholesome milk is now obtainable by railway from all parts of the country round London. Under the head of overcrowding, the reporter states that upwards of 200 kitchens and lodging-rooms have been emptied; but he fears that, while emptying is going on in one direction, overcrowding goes on in another within the same limited area.

The seventh annual report for the Holborn district, by Dr. Gibbon, has also been printed. In 1862 there were 1,468 births and 1,238 deaths in this district: these occurred in a population of 46,317 persons. The births, therefore, have been in the proportion of 31·7, and the deaths of 26·7, for every 1,000 of the inhabitants. In all London, the average birth rate was 33·7, and the death rate 23·5 per 1,000 of the population. While, therefore, the proportion of deaths in the district has been above the average for the metropolis, that of the births has been a little below it. In 1861 the epidemical scarlet-fever and whooping-cough sent many patients to the Children's Hospital; and, during the past year, the typhus epidemic has compelled many of the inhabitants to enter fever and general hospitals. It is satisfactory to observe, that the deaths under two years of age are not so numerous as in former years. This year they are 24 per cent., whereas last year they were 28 per cent. on the number of births. The distribution of the deaths, excluding those occurring in the workhouse and hospitals, varies according to density of population. Thus, the proportion of deaths was highest—viz., 23·6 per 1,000 of the population—in the St. Andrew Eastern Sub-district, where there are 392 persons to every acre of ground; then come Saffron-hill, with 21·0, St. George the Martyr, with 20·0, and the Liberty of Glasshouse-yard, with 19 3 per 1,000. The last is an exception to the general rule, as it ranks second in density of population, having 291 persons to an acre.

In an appendix, extracts are given from the fortnightly reports of the officer of health. Under the head of "A Fever Nest," he says (July 28th, 1862):—"Cases of low fever have increased from 5 to 22 cases. These have occurred chiefly in Mr. Gibson's district, especially in Ely-court, Holborn, which is under the sanitary supervision of the City Commissioners of Sewers. I have deemed it right, in forwarding a written complaint from one of the neighbours, to inform them that although the houses have been cleansed and lime-whited, they are still pervaded by a sickening sewer-smell, in consequence of the drains being defective and untrapped, and the closets without water-supply, and, in some instances, overflowing with soil. Several of these densely-peopled houses are without a drop of water on Sundays. If any one is desirous of seeing the influence of proper dwellings on the physical, moral, and even intellectual condition of the poorer classes, I advise him to visit this wretched court, and contrast the squalid, half-naked, plague-stricken appearance of the inmates, who are constantly inhaling an atmosphere of decomposition, with the orderly, healthy-looking, and clean inmates of the adjoining Black Bull Chambers."

And, under the head of Fever (June 30th, 1862), he says of Fullwood's-rents:—"Since your last meeting, in company with your inspector of nuisances, I have made a house-to-house examination of Fullwood's-rents, where there has recently been a good deal of low fever. All the houses are old, and more or less dilapidated. Although the rooms are lofty, some to the extent of 41 feet, the staircases are dark and unventilated. Several of them require to be cleansed and limewashed, and to have the water supply reinstated or improved. Unfortunately the ventilation of the court is impeded by the low entrance from Holborn, and the stone wall on the side of Gray's-Inn-gardens; otherwise, I know of no other court so admirably circumstanced for salubrity. Not only is it well drained, and in close proximity to the large garden of Gray's-Inn, but the houses themselves, especially those on the east side, have each a considerable piece of garden ground attached to them. As several of the houses are to be sold, it has occurred to me that it would be an admirable spot for the erection of model dwellings for artisans. If we may judge from the success that has attended the erection of the Black Bull-chambers, Holborn-hill, the demand for dwellings of two or three good rooms is great in this locality. It might be desirable, therefore, to direct the attention of the trustees for the outlay of Mr. Peabody's munificent gift to this as one of the eligible spots in London for the erection of such buildings."

THE STEAMER "BARON OSY."

THE work of raising this vessel was commenced early on Saturday, the 12th instant. Chains having been passed under her bottom, and lighters pinned down to them at low water, warps were laid out to haul her into the shore as she lifted. One of Norton's V-shaped pumps was placed over the fore hatch, and one of Fowler's centrifugal pumps over the after hatch; but the leak being in the fore part of the vessel, and the compartments having stood with very trifling leakage, the brunt of the work fell on the first. When this was got to work, it was found that it reduced the depth of water forward at the rate of 2 inches per minute. The area of the compartment is 57 feet by 22 feet by 14 feet. In thirty-five minutes after commencing work, 5 feet of water had been pumped out, and the vessel rose on the early flood and was safely got over to the south shore of the river, where the rent in her bottom will be temporarily repaired, previously to her going into dry dock.*

SOMERSET ARCHÆOLOGICAL SOCIETY.

THE fifteenth annual meeting of this Society commenced on Wednesday, the 9th instant, at Wells. In the county magistrates' room of the Town Hall antiquities and curiosities were arranged as a temporary museum.

The annual meeting was held in the Council Hall; the president, Mr. F. H. Dickinson, in the chair; when the report was read, which congratulated the Society on its continued prosperity. Mr. E. A. Freeman then gave a notice of the antiquities of Wells; and Professor Willis discoursed, as he had done on previous occasions, on Wells Cathedral. He gave a minute account of what he believed was the original form of the church. He said it was shorter than it was now, and was elongated in the fourteenth or fifteenth century. Originally the end was square, and he believed there was no apse. There was now a polygonal lady-chapel at the east end, and aisles had afterwards been added to connect it with the church. He supported his view as to where the

* We give dimensions, &c., of the pump:—A pair of 8-inch V's by 12-inch stroke, 10-inch suction-pipe, worked by 6-horse-power engine, seventy revolutions, 35 lb. pressure of steam. Consumption of fuel, 84 lb. per hour.

original church ended by details respecting the stonework and its peculiarities. The chapter-house, he went on to say, was one of the most beautiful examples of its kind. Returning to the nave, down which he conducted his audience, from east to west, he said the character of its architecture was unlike that of any other cathedral building, and deserved to be called the pure Somerset style. It was very beautiful, and did credit to the county. The work was not the work of masons sent for from elsewhere, whereas in all other specimens of Early English they found the same mouldings and methods of building, varied only by some difference of material, showing the work to be of the same school of masons. All of a sudden, when they got to the west end, they found a change, as if an architect had been then called in, like Mr. Scott, of the present day, who would have his own way and his own style; for they then had Early English, and not the Somerset style. The two styles were mixed together in the most complicated way he had ever seen. If they examined the spandrils they would see that three remarkable changes had taken place. The work, in his opinion, was commenced, continued, and carried on westward, in order of time. The west front was of somewhat later date.

At the evening meeting the Rev. F. Warre produced a plan of the earthworks at Masbury Hill, which it was not deemed advisable to visit on that occasion. Mr. W. A. Sanford read a paper on the Coal Strata of the County, and Mr. W. B. Dawkins one on the Antiquity of Man. A paper on the Roman Villas discovered at Bath was read by the Rev. Prebendary Scarth. He described seventeen villas within seven miles of the city.

On Thursday morning the members reassembled at the council hall, the president in the chair, when Mr. J. H. Parker delivered an address on the ecclesiastical houses appertaining to the cathedral, as to which like Professor Willis on the cathedral itself, he had expatiated on previous occasions. Mr. Parker's lecture was illustrated by large plans prepared by Mr. Hippisley, and sketches drawn by Mr. A. Clarke. After Mr. E. A. Freeman had read a paper forwarded by the Rev. J. F. Dymock, on Vicars Choral, and the Rev. A. Ducane one on the Vicars Choral of Wells, the members and their friends, to the number of more than 200, adjourned to the bishop's palace, to which they were cordially welcomed by Lord Auckland, and over which they were conducted by Mr. Parker. Here Professor Willis and Mr. Parker had a discussion about certain alterations of the towers adjoining the chapel. Mr. Parker then conducted them through the vicar's kitchen, and a house he had himself lately purchased and restored in a way to surprise those accompanying him. Mr. Parker stated that his attention had been attracted to this ancient building by a notice affixed,—"This malt-house to let." One of the vicar's houses, also restored by Mr. Parker, was next visited: it had been converted from a miserable ruin into a comfortable abode.

At the evening meeting, Dr. Daubeny read a paper on agriculture, principally relating to the question of sewage utilization; the Rev. T. Hugo one on Minchin Berrow Priory, near Bristol; and the Rev. G. Williams another on Bishop Beckington. The company, by invitation, then assembled at a *conversazione* in Mr. Parker's restored house.

On Friday, the members again assembled at the council hall to hear the reading of papers, which were more numerous at this than at any former meeting. The party then proceeded to St Cuthbert's Church, upon which Mr. Freeman read a paper.

Afterwards, the archæologists went on an excursion to Wookey Hole, Hyæna Den, Castle-hill, Ben Knoll, finishing at Somerleaze, and thus terminated a highly successful meeting.

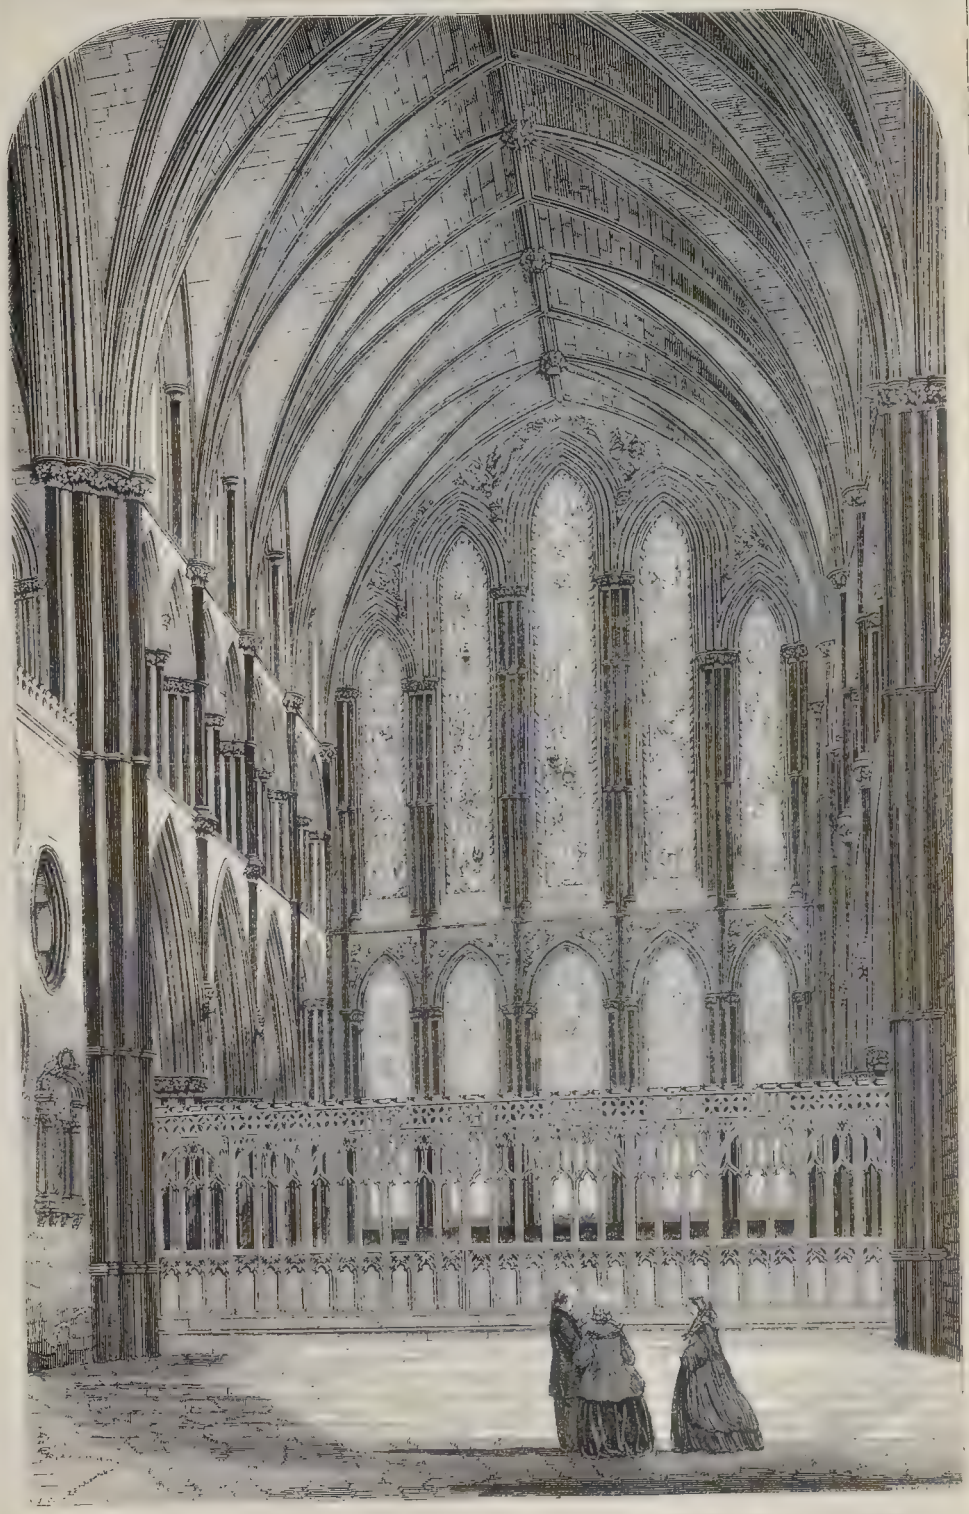
THE LATE MR. WILLIAM RANGER.

MR. WILLIAM RANGER, civil engineer, who died on the 12th instant, at his residence, St. George's-square, was known of late years, chiefly from having been employed by the Board of Health upon many of the inquiries into the condition of towns, preliminary to the provisional orders and application of the Public Health Act. His reports include those on Aylesbury, Barnard Castle (two), Barnsley, Cambridge, Chatham, Cheshunt, Coventry, Crumpsall, Darlington, Dartford, Dewsbury, Doncaster, Edmonton, Eland-cum-Greetland (two), Enfield, Grimsby, Halifax, Hartlepool, Heckmondwyke, Hexham, Hertford, Hitchin, Hoddesdon and Broxbourne, Leicester (besides one on the burial grounds), Northallerton, Northowram and Southowram (Halifax), Romford, Ryde (two or three), Shipley, Shirley, New Sleaford, Southampton, Spalding, Stockton-on-Tees (two), Thurmaston, Tottenham, Tynemouth, Uxbridge (two), Wakefield, Waltham Abbey, Ware and Great Amwell (two, and one on the burial grounds), West Cowes, Whippingham (two), and perhaps some others, besides that on Croydon, for which he was associated in the inquiry with Mr. Page. Some seven or eight and twenty years ago, Mr. Ranger's name was most known in connexion with a patented system for the formation of concrete in blocks for the building of walls in the manner of masonry. The principal applications of the material that we can call to mind in London buildings, were those in part of the Wellington Barracks, and in Barry's front of the College of Surgeons, Lincoln's-inn-fields. In these cases the effect was superior at least to that of cement; but in some buildings in which the material was employed, the durability for ornamental accessories, if not plain surfaces, has not been found sufficient. Still, the artificial stone of the College of Surgeons is in as good a state as the natural stone of the hall and library of Lincoln's Inn, hard by,—of so much later date. Mr. Ranger died aged 63. He was a Fellow of the Royal Society.

ROCHESTER AND DOVER CASTLES.

IN his paper read at Rochester already alluded to, the Rev. C. Hartshorne agreed with those who ignore the popular belief that Rochester Castle was constructed by Bishop Gundulph, as from documentary and other indisputable evidence the present building was erected some years after the death of that prelate. Taking his stand in the garden ground beneath the castle, Mr. Hartshorne explained that the outer wall was erected in the fourteenth century, and the space it inclosed filled with buildings all in connexion with the castle. Passing into the interior of the keep, Mr. Hartshorne stated that there was little or no doubt that it was built by William Corbyl, Archbishop of Canterbury, between the years 1126 and 1139. There was a tower, doubtless built by Gundulph, but not the present tower, which was erected some years after that prelate's decease. There were, again, certain marks in the tower which placed it beyond dispute that it was not the work of Gundulph; the joints, &c., of the several arches being altogether different from the form he used. The fine Norman keep was second only to Dover, which was a little larger than the keep at Rochester. They had evidence to prove that Dover Castle cost, for its erection, the sum of 1 200*l.*; and as the castle at Rochester was a little smaller, he should fix the original cost of that building at 1,000*l.* Taking, therefore, the present depreciation in the value of money, 1,000*l.* of the period mentioned would be about 25,000*l.* of the present day. The bottom of the castle keep was originally occupied by the stones, armour, &c., and the first floor and upper stories by the retainers. A well within the keep supplied water for the inmates. A beautiful arcade, a portion of which was now fitted up by a stone screen, ran round the building. It was evident the tracery work could not have been executed by Gundulph, as it belonged to a period after his death. A portion of the castle was knocked down in 1214, and rebuilt in 1227; and from the injuries to which the castle was always liable from war there was little doubt that the work of repair was constantly going on within it. With regard to the situation of the chapel which undoubtedly existed within the castle he could not speak with certainty, although he believed it was in the south-east corner of the building.

THE CHOIR OF WORCESTER CATHEDRAL.



THE Musical Festival recently held in Worcester Cathedral has led to many notices of the present aspect of the venerable building, and provoked some curiosity which the accompanying engraving may satisfy. It shows the east end of the cathedral, as restored under the direction of Mr. A. E. Perkins, of Worcester. The new east window replaces another inserted about the beginning of the present century, of the poorest design and details, and filled with stained glass of the worst description. That window, though so recently inserted, had, together with the gable and adjoining walls, become so much dilapidated that an extensive repair, amounting to an almost entire rebuilding of these parts, was necessary. On careful examination of the eastern portion of the walls, indications were found of what the architect believed had in all probabili been the position of the Early English windo which he supposed occupied the position. As traces whatever remained of a more *rece* ancient window, it was judged expedient to p in one of Early English design, using as authori the windows of the two eastern transepts, whi parts, together with the choir, lady-chapel, & form an unbroken pile of Early English archite ture. The present window was inserted at a co of 500*l.*, and is of Corsham Down stone, wi Purbeck marble columns. It has been filled wi stained glass by Messrs. Hardman, of Birmin ham, for the inhabitants of Worcester, as a tes monial of their respect and esteem for Dr. Jo Peel, Dean of Worcester.

The upper five lancets are filled with grou showing the divinity, power, and glory of o blessed Lord, of which "The Ascension" fills t centre large one. The other subjects, readi from base of dexter light, are—"The Annunci tion," "The Adoration of Kings," "Presentati in the Temple," "Teaching in the Temple." 2n "The Baptism of our Lord," "Angels ministeri to our Lord after the Temptation," "Transfig ration," "Stilling the Storm," "Preaching to t Apostles." 3rd. "The Resurrection," "Noli m tangere," "The Ascension," "Descent of the Ho Spirit," "Our Lord in Majesty." 4th. "Marria Feast at Cana," "The Pool of Bethesd "Feeding the Multitude," "Healing the Blin Man," "Cure of the Sick Man." 5th. "Raisi Jairus's Daughter," "The Raising of Lazarus "Raising the Widow's Son of Nairn," "The Ce turion's Son healed." The lower lancets a filled with subjects from the passion and suffe ings of our blessed Lord, of which "The Cru fixion" is the principal and centre one. T others are the following, reading from base dexter light:—1st. "The Nativity," "Circum sion," "The Flight into Egypt," "The House Nazareth." 2nd. "The Agony in the Garde "The Betrayal," "The Denial of Peter," "T Mocking." 3rd. "Carriage of the Cross," "T Crucifixion," "The Entombment." 4th. "Befo Herod," "Barrabas or Jesus," "The Scourging "The Condemnation." 5th. "Casting of Jes out of Nazareth," "Stoning in the Templ "Weeping over Jerusalem,—'The Son of M hath no where to lay his head.'" The subjects the glass were designed by Mr. John Hardm Powell.

A printed paper put forth by the managers the festival says correctly,—

"This venerable edifice abounds in examples of ev style of ecclesiastical architecture, from the earliest N man to the latest Perpendicular, of excellent composit and detail. The crypt, one of the finest examples of Ea Norman work, has a beautiful eastern apsidal terminat of peculiar interest, being one of the earliest, perhaps earliest, specimen of that beautiful system of groini radiating from central pillars, afterwards so perfec developed in the fine Norman chapter room, with beautiful mural arcades and vaulting of variegated sto all of which had till lately been hidden beneath an ac mulation of plaster and whitewash. Several portions ha been discovered, during the restorations, of the m ancient Norman Cathedral, the extent of which h hitherto been chiefly matter of conjecture: the rec discoveries have, however, served more clearly to def this. The two western bays of the nave are exceedin fine specimens of the later Norman work, contain specimens of very peculiar ornamentation." "T whole of the nave, with the exception of the west bays and some few other parts, is a fine composition the Decorated period, and together with the two gr transepts, which contain portions of fine Norman Perpendicular work, has been thoroughly freed fr whitewash, and restored and opened to view in its anci state. The whole fabric appears to have fallen at early period into a state of decay, and to have suffe much from the hand of violence, and not less, perha in some cases from the injudicious and ineffec attempts at repair, by which much of its external ar tecture was defaced or destroyed, and the interior m mutilated and hidden from view. In the year 1835 it found that the ordinary annual repairs were insuffici for the preservation of the fabric, and that the accum tion of decay rendered it necessary that a thorough re should at once be undertaken. To effect this, and as as possible to bring about a complete restoration of th Cathedral to its pristine beauty, the Dean and Chapter their own unassisted efforts, began the extensive wo which have been in progress since that time under direction of the Cathedral architect, Mr. Perkins."

In carrying out these works, it has been fou necessary to remove some monuments, and removal of Bishop Maddox's cenotaph in the gr cross aisle has opened a Norman arch, which probably a portion of the structure raised by Wulstan. It is rather curious that in furt prosecuting these works a second Norman a has been discovered, in the corresponding positi on the north side of the great cross aisle, beh the famous monument, by Roubiliac, of anot Worcester bishop (Hough). This is built up i a solid wall, like the arch now open in the so aisle; and a suggestion has been made for op ing this, and removing Roubiliac's work to a ther position.

THE CHOIR OF WORCESTER CATHEDRAL.—Architect in the Restoration, Mr. A. E. Perkins.

ARCHITECTURAL PHOTOGRAPHIC ASSOCIATION.

WE have before us the photographs, twenty-two in number, which have been taken, by order of the committee, for this year's issue. From these, which are obtainable only by members of the Association, subscribers of one guinea are entitled to select ten, and subscribers of two guineas, twenty. The subjects are taken from the Church of St. Trophime, Arles; Auxerre Cathedral; Bourges Cathedral; St. Gilles Abbey Church; Archbishop's Palace, Lyons; Sens Cathedral; Church of St. Martha, Tarascon; and the Abbey Church, Vezelay. The majority of them are portals of Romanesque character, very interesting and valuable. As photographs, some of them might be better. We can praise, however, even in this respect, the north door of the west portal of St. Gilles; west portal of Sens Cathedral; salle synodale of the same building; the south portal of St. Martha, Tarascon; and the west portal of Vezelay Church. We can fairly recommend our readers to join the Society at once.

Subscriptions may be paid to Mr. William Lightly, who acts as hon. secretary, 23, Bedford-row.

THE CLOSE COURTS IN LIVERPOOL.

ATTENTION is now being urgently called to those plague spots which have long given Liverpool a bad notoriety among English towns, and have been the main source of that unhealthiness for which this town has been noted; and although it is locally maintained that the town is not now an unhealthy one, and although no doubt great improvement in that respect has of late years been effected; still there are spots here and there which are as bad as ever, if not increasingly worse than when less densely populated. In the local council, lately, one of the aldermen admitted that "there are courts in this town which are never without fever, winter or summer." This remark has produced some impression; and "a gentleman of wealth and influence in the town" has written to the mayor, making the following offer:—

"With a view of promptly commencing to alleviate this misery, I beg that you will count on me for 1,000*l.* (only, however, on the terms mentioned at the foot of this letter), in the earnest hope that you may, before the close of your year of office, originate a voluntary committee having the management of a fund, raised by subscriptions, for the express purpose of buying up and obliterating these plague spots of our town.....

Thus, a few thousand pounds in the hands of a voluntary committee would go a long way; especially as many owners of property might part with it more easily to private persons than to the corporation. Perhaps a voluntary subscription will never bur up *all* the ill-constructed courts; yet we may reckon that those in which fever continually reigns can only be a small proportion of the mal-constructed ones; and this limited number might soon be purchased by the managers of such a voluntary fund, aided, perhaps, by the resale of the cleared land to the Finance Committee.

In many cases, where the rear of the court is wide enough, instead of purchasing the whole, it would be sufficient to remove one house, forming, as it were, the 'cork' to the court; and this ought to cost a mere trifle, as its removal would enhance the value of the houses behind.

If such a voluntary movement lead to an Act of Parliament for the compulsory removal of all such courts from Liverpool, so much the better."

The conditions on which the offer is made are these:—

100*l.* to be paid at once if the fund be originated on or before the 9th October next.

The remaining 900*l.* to be paid in the proportion of 100*l.* to every 10,000*l.* after the first 10,000*l.* that shall be actually raised before the 9th September, 1864.

The offer sounds liberal; but it will require a good many equally liberal subscribers to render such an offer of any really practical and efficient use.

PREMIUMS FOR DESIGNS FOR COTTAGES.

TWO prizes of 25*l.* each have been placed in the hands of the council of the Society of Arts, to which is added the Society's medal, to be offered for the most approved designs for cottages, with three bedrooms in each, to be built singly or in pairs, at a cost not exceeding 100*l.* each.

They are offered, one for competition among the members of the Architectural Association, and the other to be open to the United Kingdom.

In order to secure a proper sanitary condition, such provisions are to be made as have the sanction of practical experience.

"It is deemed necessary that each cottage should contain, on the ground-floor, a living room, of about 150 feet superficial; a scullery, or kitchen, of not less than 70 feet superficial, with a ventilated pantry; and, on the upper floor, three bedrooms, one of which must not be less than 100 feet superficial: in two of the bedrooms fireplaces should be provided. The height from ground to first-floor should be 9 feet, and the bedroom, or upper floor, be 8 feet clear.

The memorandum of the Inclosure Commissioners with respect to the substantiality of agricultural buildings (as applied by them under the several Improvement Acts), shall be adhered to.*

The drawings are to be on a uniform scale of one-eighth of an inch to a foot, and they are to be not fewer than six in number, viz.—two plans, three elevations, and one section.

Each design is to be accompanied by a detailed specification, and an estimate stating in full the quantities of all the materials required, and the *cost* price at which they are calculated. Brickwork at 8*l.* per rod reduced; countess slates at 23*s.*; and Baltic pine timber at 2*s.* 3*d.* per foot cube. In regard to other materials and labour the whole are to be calculated at cost price. An allowance of 20 per cent is to be made for contingencies and builder's profit, with 5 per cent. for the cost of superintendence, so that the *prime cost* of each house must not exceed 84*l.*, which amount must include not only the cottage but the fixtures, water supply or well, fencing, paving, and all those necessary addenda which the cottage owner must provide, and which, costing money to provide, he requires interest for in the shape of rent."

In the selection of the plans for premiums, experienced professional assistance will be obtained, and the estimates will be subject to the examination of a competent surveyor. The designs will be submitted to public inspection, if deemed worthy thereof, and the two most approved will be retained for publication or not, at the option of the council.

The judges will be an architect, a land agent, and a builder, named by the council of the Society of Arts.

It would be an advantage if each competitor could name a contractor who would undertake the erection of ten pairs of cottages, according to the design and estimate.

The plans, drawings, and specifications must be sent to the Society's House, John-street, Adelphi, not later than the 1st of January, 1864.

* This may be obtained at the Society's house.

ST. PETER'S PRIMITIVE METHODIST CHAPEL, CAMBRIDGE.

THE following were the tenders; Mr. Christmas, of Cottenham, architect:—

	For the Work according to the Drawings.	If the Chapel be 2 feet longer than the drawings, add.
	£ s. d.	£ s. d.
Bullock, Cambridge	748 0 0	—
Harvey, ditto	695 0 0	25 0 0
J. Oates, ditto.....	655 0 0	30 0 0
Christmas, Cottenham, the architect (accepted)	539 0 0	7 0 0

Thus Mr. Christmas is in the anomalous position of architect and builder. We hear that he intends to appoint a clerk of works on his behalf as architect, to see that he as builder does justice to his own design as architect: it is not clear, however, whether the architect is to look after the clerk of works, or whether the builder is to look after both.

TELBIN'S DIORAMA OF THE HOLY LAND.

THE pictures painted by Mr. Wm. Telbin, and exhibited in a piece produced at the Haymarket Theatre, are now shown at the Egyptian Hall, with some additional views, chiefly in the form of the moving diorama. There are seventeen subjects, including Cairo, Philœ, Jerusalem, the Holy Sepulchre, Ford of the Jordan, Plain of Jericho, the Dead Sea, Nazareth, Galilee, Mount Hermon, Distant View of Damascus, Interior of a Turk's House, Bäalbec, Beyrout, Street in Smyrna, Constantinople, and Entrance to the Bosphorus. The greater number of the subjects are as finely painted as anything that has come from Mr. Telbin's hand, and certain effects of light are well managed. In the exhibition of the view of the interior of the Church of the Holy Sepulchre, one of the best of the number, the sepulchre opens, and discloses the body of the Saviour, the head supported by angels,—a beautiful piece of effect. The details of architecture in the Bäalbec view are not sufficiently made out. The statement in the description that the Great Temple of the Sun is supposed to have been built by Solomon, should be corrected, or supplemented, to the extent of saying that the existing remains are undoubted Late Roman. This, the mouldings and ornamentation are quite sufficient to show. There is one omission, common in the lectures accompanying such exhibitions as the one we are noticing, and not compensated by any amount of sounding words. The lecturer does not point out, with sufficient clearness for his audience to discover, the separate buildings or other objects of which he speaks, or which are included in the picture. The enterprise which prompted Mr. Telbin's journey to the Holy Land for the purpose of obtaining faithful representations, the supreme interest of the places shown, and the skill and power which the pictures display, make a strong claim on public attention. Vocal music is added to the attractions of the exhibition.

HOW TO PREVENT THE TRANSMISSION OF SOUND THROUGH GLASS.

A CORRESPONDENT asks in the *Builder* how sound is to be prevented passing through a plate-glass partition. "Civil Engineer" says,—The answer is, Have two plates with an air-space betwixt. An ordinary window may be glazed with double "sheets" or "squares" of glass; and if an air-space of ¼ inch is left betwixt each sheet or square of glass, sound will be deadened, and heat be retained. Mr. Bridges Adams has, I think, proposed "double windows," as described; that is, ordinary window-sashes with double glass, having ¼ inch or ½ inch air-space betwixt each square of glass. Ordinary windows in offices or street-fronts will be warmer, and deaden the sound, if so glazed.

ARCHITECTS AND BUILDERS.

SHOREDITCH WORKHOUSE.

"AN Architect," who sends us a local paper containing a report of a recent meeting of the Board of Guardians of Shoreditch, draws our attention to a statement (as reported by one of the speakers) of the architect of the workhouse which is being built for that parish, tending to discredit the architectural profession. It had been objected that in a contract of 43,000*l.* the sum of 7,000*l.* is left at the disposal of the architect, Mr. W. Lee, without control, for engineering and other works. The architect satisfied the board, and the objection was withdrawn; but the statement made by him rankles in the mind of some of our readers. What the architect's defender said was this:—

"He had made it his business to consult Mr. Lee upon this question, and asked him whether it was an expected thing with professional men to get a profit out of these things? He said, 'Yes; it is usual.' He said, 'Now, Mr. Lee, do you mention that in confidence, or can I make any use of it?' He said, 'Yes; you can make any use you please of it.'"

We should like to know on what grounds Mr. Lee makes this assertion?

BUCKLAND ST. MARY, SOMERSET.

THE Church of Buckland St. Mary, which has been entirely rebuilt, at nearly the sole cost of the rector, the Rev. J. E. Lance, has been consecrated and opened for divine service, by the Bishop of Bath and Wells. Through the lapse of years the old church had become much dilapidated, and almost unfit for the purpose of religious worship; and its condition was long a subject of serious anxiety to the rector. At length he came to the resolve to rebuild the church at his own expense; but he was joined in the work by the parish, and friends and relations. Notwithstanding this assistance, however, the rector is said to have expended 16,000*l.* on the church, the total cost of rebuilding being 20,000*l.* The new church of St. Mary Buckland is built in the Second Pointed style of the later floriated character. The building has been several years in progress, it being the desire of its founder that every part of it should be built as solidly as possible and of the best materials. The plan of the church consists of a nave, north and south aisles, with a tower at the south-west end, a south porch, a chancel with side chapels, the south appropriated as a vestry. The nave may be said to consist of five bays, and is separated from the north and south aisles by an arcade of clustered columns and deeply-moulded arches. Over the apex of the arches are placed twelve canopied niches, each niche containing a statue of an apostle. In the gable wall over the arch is an elaborate niche, with a statue of our Lord. The whole of the statues were provided by Mr. Earp, of London. The roofs, both to the nave and aisles, are of oak. The former has moulded and arched trusses resting on hammer beams; the latter moulded trusses on carved brackets and divided into panels by moulded ribs. The west end of the nave has a six-light window, filled with painted glass, executed by Messrs. Clayton & Bell. The aisle windows are ornamented by painted glass, by Messrs. O'Connor and others. The chancel roof has much carving,

enriched by polychromy, the work of Mr. A. Stansell, of Taunton. The vestry on the south side and the north chapel are separated by wrought stone screens, with enriched cornices, shafts, and decorated tracery work. The chancel is separated from the nave by a low arcaded stone screen of different coloured materials, and the little pillars composed of stones and marbles, the productions of Somerset, and other details, are executed in green and other marbles. In the centre is an opening, to which are hung brass gates, with cinquefoil tracery and other ornaments. Combined with this screen stands the pulpit, on the north side approached from the chancel. This, again, is composed of Ham stone, inlaid with various marbles, the body of the pulpit being supported upon a large central column surrounded by smaller pillars of coloured marble, with carved capitals of white lias—all these materials from the county. There are five deeply-recessed arches, containing figures of the four evangelists, our Lord occupying the centre one. The east end of the chancel has a traceried five-light window, filled with painted glass, by Messrs. O'Connor. In the east window, the lower compartment represents the sufferings and crucifixion of Jesus. The upper division represents Jesus on His throne of glory, surrounded by glorified saints. The north window represents the resurrection; the south, the ascension. The window in the north transept is by Messrs. Powell, and represents four subjects;—Abraham offering up Isaac; Jesus in subjection to his parents, and reasoning with the doctors; and Hannah presenting Samuel to the Lord. All the remaining windows are by Messrs. Clayton & Bell. That in the tower represents the passage of the Red Sea, and the plagues. In the west window is a representation of the Day of Judgment. On the north side of the west end of the nave are two windows filled with stained glass. One is a one-light window, the subject of which is the Baptism of our Lord, and the other, a two-light window, the subject represented being the Entering into the Ark. In the north aisle is a mercy window, with subjects from St. Matt. xxv. Below the east window is a sculptured reredos, filled with arcaded and inlaid work of Derbyshire and Watchet alabaster, the centre panel of white alabaster, with gold metal cross. In the north side of the sanctuary there is placed a mural recessed segmental arch, having deeply-sunk mouldings, consisting of a memorial of the Rev. Mr. Lance's first wife. The coped gravestone is bursting asunder for a final resurrection. The artist was Mr. Forsyth. The chancel is furnished with oak stalls, the front and ends being carved. The chancel is paved with encaustic tiling. The aisles are filled with solid benches, the ends panelled, traceried, and carved. The nave is fitted with loose benches of oak. The western tower communicates with the nave by a segmental arch. Opposite the entrance stands the font, made of native stones and marble. It is octagonal in shape, the bowl being made of Williton sandstone, and in the alternate sides are inserted, in medallions, figures of the four evangelists, the other sides containing representations of the baptism of the eunuch by Philip, the baptism of Christ by St. John, Christ's rebuke to those who kept back little children from approaching him, and Christ's charge to his apostles to go into all the world, &c. This is supported by columns of Somerset marble from the Quantock Hills, and the capitals are of Watchet alabaster. The whole rests upon a stand of polished lias. It is surmounted by a carved and canopied cover of oak, made from the old oak of the former church. The font is the gift of Mr. H. Davis, of Taunton, by whom the entire church has been built. The tower stands at the west end of the south aisle, and has an entrance from the west. The interior is groined with stone, and contains a four-light window filled with stained glass. In the upper stage is a peal of six bells. The tower is strengthened by graduated buttresses, and terminates with an enriched parapet and pyramidal roof. There is also a south porch, groined with stone. Inside the south door is a canopied niche, which contains a figure of the patron saint of the church. The span roofs of the nave and chancel, as well as the lean-to roofs of the aisles, are covered with Bridgwater tiles. The church is built of Ham Hill stone dressings, and flint facings. The entire building was designed by Mr. Ferrey, the diocesan architect; and the work has been executed by Mr. H. Davis, of Taunton, who recently re-built the tower of St. Mary's Church, Taunton. The organ, which is placed in the north chapel, has been built by Mr. W. Sweetland, of Bath. The great organ (CCC to F, 54 notes) contains the following stops:—open diapason, stop diapason (treble and bass), dulciana, principal, twelfth, fifteenth, German flute. The swell (tenor C to F) contains:—open diapason, dulciana, stop diapason, principal, fifteenth, hautboy, and trumpet, inclosed in a Venetian swell constructed on a new principle. There are also pedal organ, CCC to C; open diapason from CCC to F, and three composition pedals. There is a metal pipe front.

CHURCH-BUILDING NEWS.

Chew Stoke (*Somerset*).—The parish church of St. Andrew, Chew Stoke, after undergoing a restoration, has been re-opened for divine service. The old edifice, which was in a very dilapidated state, consisted of a chancel, nave, and south aisle; but a north aisle and north chancel chapel have been added. The tower has been preserved, and the new work made to harmonise with it. Interiorly the south arcade is of the thirteenth century, as is also the east window; but other portions indicate the fourteenth century period; and instead of designing the alterations all in one style, the old features have been retained. The church, therefore, as restored, represents three periods of Gothic architecture. The south aisle is said to have been rebuilt, stone for stone, according to the old design; but the north aisle has been built in the same style as the tower, and is divided from the nave by an arcade of clustered columns with friezes of angels for capitals. The north chancel chapel, in continuation of the aisle, is divided into an organ chamber and vestry by means of screens; and the chancel itself is separated from this chapel and the south chapel by par-closed screens. The fittings and roofs are all new. The pulpit, which is octagonal and in the Decorated character, is sculptured and inlaid with marble; and the same may be said of the reredos under the east chancel window, which is inlaid with coloured marbles, and is to be elaborately ornamented. The east window represents incidents in the life of St. Andrew, the patron saint of the church, and was executed by Mr. Bell, of Bristol. It was the special gift of the rector, the Rev. W. P. Wait. The stone font, which is made to agree with the Early English work of the church, was given by Mrs. F. Durke, the wife of the contractor. The font stands at the west end of the church under the tower, which forms a baptistry. On removing the gallery which formerly blocked up this portion of the church, a groined ceiling to the tower, and which is now exposed to view, was discovered. The chancel floor is inlaid with Minton's and Mawe's tiles. The roof is of open timber, stained and varnished, with carved angels at the cornices, and the seats are also of stained wood, with carved *fleur de lis* ends. The old church could accommodate 239 persons, including the west-end gallery, which blocked up the tower; but now it will accommodate, without the gallery, 318, and the larger portion of the seats are free and unappropriated. The churchyard has been levelled. The old organ has been restored by Mr. Vowles, of Bristol, and now stands at the north of the chancel. There is a south porch, with open pierced parapet work, and battlement cornices to the nave and aisles throughout. Underneath the church is a heating chamber, containing an apparatus of Mr. Aden, of Trowbridge. It was not intended at first to effect so complete a restoration in the edifice as has been done; but as the work progressed the old building was found to be so dilapidated that sweeping improvements were required. The whole of the alterations were designed by Mr. J. Norton, of London and Bristol, architect, the contractor being Mr. F. Durke, of Chew Stoke.

Nantddu.—The church recently built in this place has been opened for divine service by the Bishop of St. David's. The church is situate in a valley that has great attractions to the people of Merthyr. The edifice was designed by Mr. Buckridge, of Oxford; and the builder was Mr. W. Williams, of Brecon. The cost was 400*l*.

Llanfihangel (*Brecon*).—The committee for the restoration of Llanfihangel Fechan Church have received the undermentioned tenders, according to the plans and specifications prepared by Mr. T. Nicholson, of Hereford, architect:—Mr. W. Williams, builder, Watton, 531*l*.; Mr. R. Price, builder, Llanfaes, 528*l*; Messrs. Williams & Sons, Llanfaes, 480*l*. The last-named was accepted. The building of Curist College, which is rapidly drawing to a close, and the old Christ College Church, which is about being restored, are both under the superintendence of Messrs. Williams & Sons.

Shrewsbury.—The works at Shrewsbury Abbey Church are now brought to an end. These comprise the re-establishment of the structural parts of the edifice, the restoration, so to say, of much of its foundation, and under-pinning. Some centuries ago, the ancient Norman clerestory had been destroyed, and the roof lowered to the level of the triforium arcade. Want of funds determined the committee not to attempt to replace this clerestory, or restore the transepts and part of the choir, as at first proposed. The lighting of the interior has been obtained by opening the triforium arcade, and fitting it in accordance with the character of that part of the structure, and in something like harmony with the western and later parts of the building. The gallery that filled up the interior tower base, with the cumbrous organ it supported, has been removed, and the windows on the side of the town, as being of good proportions, have been opened. Thus, the great west window is now displaced. Some farther details will be found on p. 572, *ante*.

Wilmslow (*Cheshire*). — The ancient parish church of Wilmslow, dedicated to St. Bartholomew, has been re-opened for divine service. Considerable repairs and alterations have been made, at a cost exceeding 3,000*l*. An addition has been made to the churchyard, at a further cost exceeding 1,000*l*. A transept has been added to the church, and also a gallery for Sunday-school children. The pews have been removed, and their place supplied by open sittings.

PROVINCIAL NEWS.

Peterborough.—The cattle market project is progressing, and operations, it is said, will be commenced shortly after Michaelmas. The plan has been prepared by Mr. T. C. Thorburn, the architect of the Derby cattle-market, and approved by the directors. The stalls are to accommodate 825 store beasts, 685 fat, 104 calves, 4,448 sheep and lambs, 520 pigs, and 145 horses. The area of the land is about 5½ acres.

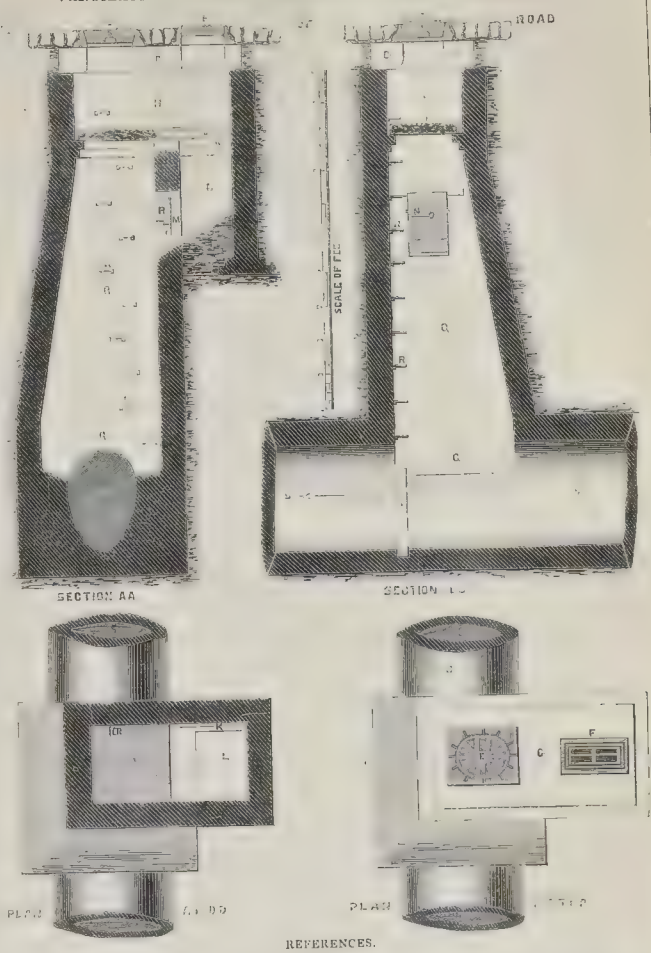
Haileybury (*Herts*).—The council of Haileybury College (which was formerly the East-India Company's Cadet College) are now having waterworks erected for the supply of their extensive establishment. The supply is from a deep well sunk into the chalk, whence springs an unlimited quantity of water of the purest quality. The water will be pumped into a tank holding 10,000 gallons, erected on a tower 234 feet above the water-level. The works include a high-pressure steam-engine, Cornish boiler, pumps, and other work, and will supply 4,000 gallons per hour. The swimming-bath, lately erected, will require 235,000 gallons of water, and is one of the largest in England, being 210 feet long. Mr. Josiah F. Fairbank, C.E., designed these works, and is entrusted with the execution of them.

Buckingham.—The council having issued notice for tenders for a new iron foot-bridge in lieu of the present wooden and unsafe one near the Woolpack Inn, the one sent in by Mr. Wright, of Stamford, was chosen, the cost being 90*l*. The bridge is to be constructed of wrought iron, and to be of 32 feet span. The abutments, &c., will have to be completed under a separate tender. The council received plans and tenders from eight different firms.

Aldershott. — The Mission-hall and Soldiers' Institute, the first stone of which was laid on the 11th of February by the Earl of Shaftesbury, was to be formally opened on the 4th. The building is in the Early Anglo-Gothic style, and is furnished with a reading-room, smoking-room, library, coffee-bar, and other offices, together with a lecture-hall, capable of accommodating 500 persons. The architects are Messrs. Eggar & Stapley, of Farnham, and the builders Messrs. Goddard, of the same place. The object of the Mission-hall is to furnish the soldier with wholesome means of recreation in place of the vitiating temptations which exist at Aldershott. Amusements will be provided, and occasional lectures on interesting subjects will be given.

THE MAIN DRAINAGE AND SUBURBAN GARDENS.

Mr. Glenney complains of the ill effect of the deep cutting of the Main Drainage on the market and other gardens which surround London. He tells us that many wells and other sources of water-supply have been dried up, and that the moisture has been so much absorbed from the soil that trees, plants, &c., lack nourishment, and suffer severely. Mr. Glenney's opinions on subjects of this nature are well worthy of consideration, but it should be borne in mind that this summer



has been one remarkable for the small extent of rain-fall; and it may be, that what is complained of is but temporary: but in one respect we should not regret this drying of the soil, which, if other things are well managed, is in great cities conducive to health. This gentleman does not approve, except in cases of extremity, the watering of flowers and plants upon the surface; but when we notice that pipe drainage of both fields and gardens has had a most beneficial effect, and that the rain descends from heaven and waters the earth, it seems natural that some plan of irrigation—different from that at present in use—may be applied with success in the preservation of the beauty and usefulness of our parks, gardens, &c. It will be said that the cost of water in the metropolis would prevent the application of this to any sufficient extent; but it is not likely that London can be supplied with this necessary in the same manner as at present, but that ere long we will have new supplies, from distant and pure sources of water, without limit. The Main Drainage being completed, it is not unlikely that the public attention will be directed to this most important matter.

MAIN SEWER VENTILATION.

In the construction of main sewers it is of the utmost importance to provide for full, free, and unceasing ventilation at many points; and also, as far as is possible, to *disinfect* sewage gases before these escape into the street above the sewer. Some twenty or more years since the London sewers were, for the first time, extensively and permanently ventilated, with, it must be confessed, great sanitary advantages to the residents in the metropolis. The London sewers are, however, unfortunately for the most part ventilated by vertical shafts *direct* from the sewer to the street; the ventilating grates allowing sewage gases to escape direct into the open air above; street mud, ground macadam, sticks, straw, and any other material which will pass through the open spaces of the ventilating grate, falling down and tending to block the flow of sewage below. Some years since Dr. John Stenhouse proposed the use of charcoal as a disinfecting medium for sewage gases. Mr. Robert Rawlinson, sanitary commissioner in 1855, adopted charcoal at the suggestion of Dr. Stenhouse, in the British Hospitals on the Bosphorus, as also in the Crimea, and, subsequently, in various towns in England on main sewers; as, at Worksop, at West Ham, at Brighton, at Winchester, at Windsor Castle, at Swansea, and at other places. Dr. Letheby, the City Officer of Health, and Mr. Wm. Haywood, the city engineer, have also used Dr. Stenhouse's mode of applying charcoal to disinfect sewage gases in the City sewers; and, as reported by these gentlemen, with advantage. There are difficulties on the City sewers peculiar to the City of London. The volume of sewage is vast, and the sewers are large, having flat inverts, with small falls. They have also to be cleansed by hand labour; any check, therefore, to the free flow of air to and from the sewers, to dilute the sewage gases, is attended with some danger, and the intervening of screens of fine charcoal *might* retard ventilation in a degree. The remedy is, however, to be found, not in abandoning a use of charcoal, which is so beneficial, but by increasing the area for ventilation, so as to compensate for any retardation of an escape of sewage gases by the ordinary openings. The following facts have been proved:—Ordinary wood charcoal, broken small in grains like coffee beans, and placed in wire boxes, or trays, so as to "*screen*" the sewage gases, oxydises such gases as they pass through the charcoal. This effect is not evanescent, but is permanent, in a great degree. The charcoal abstracts oxygen from the atmosphere by its enormous area of pores, and combines this oxygen with the sewage gases in such manner as to produce a sort of slow combustion, or such recombination, as to render sewage gases comparatively innocent. Dilution in the air has a similar effect, but is not so rapid.

In main sewer ventilation, charcoal can be used at all ordinary manholes, as shown on the diagram, plans, and sections. A manhole-cover is placed over the vertical shaft above the sewer, which forms the street surface, and is air-tight, but moveable. A side chamber is formed, over which to place the open ventilating grate, and a wire tray, to be filled 3, 4, or more inches deep with fine charcoal, is so placed that it will slide over the vertical shaft, and so cause all gases escaping from the sewer to pass through the charcoal when in action. The tray can be drawn or pushed back over the side chamber when it is desirable to enter the sewer to examine, to cleanse, or to flush it. Such ventilating chambers, at some 300 feet to 500 feet intervals, are in use on the main sewers in West Ham, and in other places. The side-chamber is an advantageous arrangement, if there be no charcoal tray, in preventing dirt falling upon the sewer invert, and so impeding the sewage flow.

VENTILATION OF MAIN SEWERAGE.—*Mr. R. Rawlinson, C.E.*

THE SANITARY STATE OF OUR TOWNS.

The Privy Council having sent down Mr. Bristow to Whitehaven to make a sanitary inspection of the town, he attended a meeting of the sub-committee of the Board of Health, and in the course of his remarks on the filthy state of the town, part of which he had then visited, he referred to the report made on the town thirteen years ago by Mr. Rawlinson, whose recommendations as regarded waterworks and the burial of the dead outside the town had been carried out, but in other respects the town had remained till now in precisely the same state as then. Many things, he remarked, could be done under the Local Government Act, if they had the co-operation of the local magistracy; and the Nuisances Removal Act would enable the local authority to remove nuisances, and to compel whitewashing.——Small-pox, it appears, is still spreading at Keswick, and cleansing processes and vaccination there are still the order of the day. Dr. Leitch, a local medical authority, states that there has been a gradually increasing mortality for many years in Keswick, showing that there must be some special cause of death at work, and in his belief the increased mortality is due to the circumstance that the old imperfect drains are unfitted to carry the refuse of water-closets and cesspools, which have gone on increasing during the last ten years. Mr. Rawlinson, in a letter to him, expresses his indignation that ignorance and prejudice should so long continue to oppose effectual measures for restoring Keswick to a more healthy state: he says that main sewers might be got for a 6d. rate.——At Edzell, in Scotland, lately, Professor Miller, at the close of a lecture, urged that this village should be thoroughly drained; and the Earl of Dalhousie, while passing through to Dundee, has intimated to Professor Miller that he will be at the whole expense of putting in the main or leading drain in the village, and carrying it down to the river North Esk.

National Association for the Promotion of Social Science.—The seventh annual meeting will be held in Edinburgh, commencing Wednesday, 7th of October, under the presidency of Lord Brougham.

THE CONSERVATION OF NAVIGABLE RIVERS.

AT the recent meeting of the British Association for the Advancement of Science, at Newcastle-upon-Tyne, in the Mechanical Section, Mr. J. F. Ure, engineer to the River Tyne Commissioners, read a long and interesting paper on the several methods adopted towards improving the navigation of the river.

In the discussion, Mr. J. Scott Russell quite agreed with the plan at present being adopted by Mr. Ure for the improvement of the river, but thought Mr. Ure had rather understated than overstated the advantages that might be expected as resulting from an improved depth of water in the river. Having been connected for about forty years with the Clyde, he well remembered the revolution that had been produced there, and he remembered when only a few fishing-boats could get to the quays, and also when he went down with great wonder to see the first two-masted ships come up to the quays at Glasgow; they had now from 16 to 20 feet of water, and all this had been accomplished by the same system now being adopted on the Tyne—namely, by dredging. He congratulated them upon the fact that instead of taking the little-and-little-bit plan, they had had the courage to apply at once the most modern principle with which they were acquainted. They were going to encourage the tidal wave to come in by giving it great depth, uniformity of channel, and great widening to the mouth of the sea.

Admiral Sir E. Belcher totally disagreed with Mr. Ure as to the plan adopted by him, and quoted the Clyde, as showing that the improvements there had been effected not by dredging, but by narrowing the channel.

On another day Mr. Ure conducted a party down the river. The works comprise piers at the mouth of the river, which will cost 660,000*l.*, and inner works estimated to cost 950,000*l.* The dredging plant is said to be worth 250,000*l.*: it includes two of the most powerful dredging-machines in the world, lifting three millions of yards of sand from the river-bed in one year.

We may remark that the reports do not convey quite a clear impression of the arrangements at the mouth of the Tyne, designed by Mr. Walker, so far as the piers tending to narrow the mouth are concerned. These arrangements, it has been said by some engineers, tend to produce silting up of the river, although no doubt the dredging would at least retard that operation.

MEETING OF THE NOTTINGHAM ARCHITECTURAL SOCIETY IN LICHFIELD.

ON Monday, the 17th ultimo, the members of this society, accompanied by their president, Mr. T. C. Hine, held their annual excursion meeting at the cathedral town of Lichfield. The following members and associates were present:—Mr. T. C. Hine, president; Messrs. Jalland, Gilbert, Clarke, Norris, Evans, John Jackson, Heazell, S. D. Walker, Hickson, F. Booker, R. Booker, G. F. Hine, R. C. Clarke, Ingle, and G. Hickson, with Mr. Frederick Jackson, the honorary secretary. The party devoted a large portion of the day to the examination of the cathedral, and visited other places of interest. Amongst them was Dr. Johnson's house. This house, at the corner of Sadler-street, still presents its ancient front, but has degenerated into a draper's shop: fronting it is an unworthy statue of the doctor himself, supposed to be in deep meditation; and near the Market-house, Edward VI.'s grammar-school, in which Johnson was trained, as were Addison, Garrick, Bishop Newton; Salt, the Egyptian traveller; and other eminent men. The doctor was wont to say that Dr. Hunter never taught a boy in his life: *he* whipped and *they* learned. In the castle, on the site of which are erected the Newton almshouses, Richard II. was confined. The neighbourhood is somewhat rich in antiquities. Amongst these is Edial, or Edgehill, an old high-roofed house where Johnson lived in 1736, when Garrick was his pupil; and at Stow Hill he wrote the greater part of his "Lives of the Poets." A Roman station, called Etocetum, was supposed to be here, from which the town is said to have taken its name. A number of martyrs suffered under the Romans, in a field close to the station, in the third century. Lich being the Saxon for dead body, hence the name Lichfield.

The restorations in the cathedral, our readers know, include a new chancel floor of illuminated and glazed mosaic work; the carved oak throne, with the dean, chapter, and choir sedilia, by Evans; a reredos, commenced,—to cost, it is said, 3,000*l.*; and the chancel screen, in brass, copper, and iron, richly coloured, a work worthy of comparison with its sister screen, made for Hereford cathedral. It is to be regretted that the screen was not confined to the space between the clustered piers of the chancel arch. The stonework has been somewhat defaced and hidden from view by the metal work extending beyond the space before named.

ACCIDENTS.

HEMBRIGG Mill, where a recent terrific boiler explosion occurred, is again the scene of a disaster. During a gale of wind the chimney has been blown down. It was about 25 yards high, and was built after the boiler explosion, two months ago, and only required the coping-stones at the top to complete it. It was erected on the site of the old chimney. Across two houses, one occupied by the owner, the chimney fell, and completely battered in the roofs and floors; and, though the buildings were three stories high, several loads of bricks and rubbish were deposited in the first story. The inmates had barely time to escape.

The roof and side wall of a foundry at Salford, Todmorden, have fallen in. The cause is supposed to be the drying of the timbers by the heat arising from moulding. Fortunately the building fell after work hours.

At the Ouseburn Engine Works, Newcastle-upon-Tyne, while stripping an immense casting, it was found necessary to shift its position, and a traversing crane was employed for the purpose. While this operation was being performed, one of the iron girders on which the crane travelled gave way, it is supposed, from the oblique strain brought to bear upon the coupling chain; and seven men were brought to the ground, one of whom was killed, and three others, were injured.

A number of workmen, in the employment of Mr. Thomas Davies, have been at work for some time past in the removal of several old cottages situate in Mill-street, Leominster, new ones having been erected. To serve the purposes of a workshop, and as a place for lime and other things, the workmen had left an old house standing in the rear of the new buildings; and this was covered with a very heavy roof of tile and stone. A week before, the workmen cut away the binder or tie which held the roof together, and to this act is attributed the circumstance that the building fell and killed one of the workmen. Verdict, "Accidental death."

The verdict on the bodies of the two men, killed by the falling in of a well in the course of being built at Woodbridge, was, "That the death of the deceased was caused by accident by the partly caving in of a well, arising from the deceased, Charles Dove, incautiously taking some bricks from one quarter of the well without properly securing the quarter from which those bricks were taken."

THE COLOURED DECORATIONS IN NEW STREET CHAPEL, YORK.

THE above decorations, which have just been brought to issue, have been completed under the superintendence of Mr. Worthington, of Blake-street. The design, though in some points open to exceptions, is on the whole very satisfactory. The walls of the chapel and orchestra are tinted a light cinnamon. A continuous painted band or label, in white and chocolate, is carried round the window arches, and connects them at their springings; the circular part being filled in with a Vitruvian scroll and the horizontal with a Doric fret, interrupted at intervals by a four-leaved flower. The ground-floor has a stiff maroon arabesque above the skirting, and a white honeysuckle ornament on gilt and chocolate grounds beneath a portion of the cornice. The gallery front remains in its old state, but the plastered cove immediately below it is filled in with upright patterns in pink and buff, the effect of which is not altogether satisfactory. The pews above and below are stained in imitation of oak. The design of a painted ceiling is often determined to a great extent beforehand by its panels, &c.; but in the present instance there was nothing to restrict the fancy of the artist except an internal moulding and the disposition of the ventilators. This arrangement is in the main simple and effective, and the general tone of the colouring very harmonious, and neither positively poor on the one hand nor unduly brilliant on the other. The groundwork tint is a light pink. The (quasi) panels are a grey azure, separated from their light buff margins by a running fret. Those around the large central ventilator are similarly treated, but the blue is deeper, and (like the semi-dome of the orchestra) diapered with gilt stars, and immediately bordered with bands of guilloche, &c., painted white and cholocate on a ground of rich orange buff. A light green margin, above a foot wide, runs round the whole of the ceiling close to the cornice, which is white picked out with gilding. The ventilators are surrounded by the interlacing pattern, in white and greenish buff, and exhibit a white flower on maroon ground, both being relieved with gilding. The walls to corridors are a light grey azure, the old skirtings of wood colour being retained. The tint in question may be very serviceable and durable, and form a very effective contrast, but surely this will not justify the treating of plaster like wood, the graining it as such, and above all, the careful imitation of the joints of carpentry.

YORK.

A GROWL AT THE PRESENT.

SIR,—After a recent walk through the City, I could not help making the following anything but consoling reflections. The recently-finished buildings one observes have certainly the merit of expressing the characteristic traits of the age, pretence and ostentation; and I know no reason why we should expect our architects to differ in any degree from their employers. Even in the last century the architecture still retained some of the good old English tradition; the good old brick houses retained in a slight degree that homeliness, that simplicity, that we have considered as our own, and handed down to us from the early middle ages. A glance at some of the old drawings of our Mediæval towns will at once explain my meaning; but now a cotton warehouse imitates, and that very badly, the palace of a Florentine noble; and a linseed broker must have a bad imitation of a Gothic palace on the grand canal at Venice; at other places is a nondescript style, invented for this peculiar age,—and the carving on it, I am told, is French Gothic in character: it certainly does not resemble any I ever saw: however, that is nought; but this I do know of it, that it is, in the vulgarity of its undercutting and snobbishness of its coarseness, quite worthy to decorate the dens where that money is made, to be spent afterwards in the sham of society or pettiness of life in the suburban villa, all of which life consists in trying to appear somewhat above its actual position in the social scale. Old hostelries —all things old—are going; not a sign on the part of the architect to retain in his new buildings one particle of dear old English tradition. French, Italian, Renaissance, German, but of English not a sign,—none of the sweet, dear, homely poetry of England's architecture. If we build a church it is French, a convent is Roman, an insurance-office is Renaissance, something else is Lombardian; whatever it is, there is one prevailing idea,—something large, coarse, showy, thick, clumsy, would be grand, but not an idea of any of the tradition of England's sweet poetic loveliness and littleness. England never aimed in olden times at grandeur: it left that to France and Italy: it sought in accordance with its landscape, its life, its poetry, a small sweet homeliness. We live in an age that hates willow-pattern plates, Dutch tiles, and everything else but show, money, and sin.

X. Y. Z.

ARCHITECT AND HOTEL KEEPER.

SIR,—I enclose you a copy of a circular sent round to the directors of the Bridlington Hotel Company, and would draw your attention to a new phase in the architectural world, viz.—a person styling himself "Hotel keeper and architect," thinking it might be advantageous to the profession to calculate the benefits that might arise from such a combination. Either hotel-keeping must be advancing in rank, or architecture must be on the decline.

P. W.

*** In the prospectus in question, the competitor calling himself architect makes it a claim for consideration of his drawings that he keeps an hotel himself.

"CARLISLE BRIDGE COMPETITION."

SIR,—Though a "non-expectant" in this matter, I cannot help expressing an opinion that sufficient time has elapsed since the drawings were sent in (May, 1862) for the committee to have come to some decision in the selection of a design. Their doing so would, at all events, allow the competitors who may be unsuccessful an opportunity of getting back their drawings, some of which, produced at no small expense and trouble, *must* receive considerable injury from dust and exposure in forming pictorial decorations for the walls of the Dublin council-chamber, which service, I understand, they are at present performing. If such injury do result, I am inclined to think that the committee can be held responsible, having detained the drawings for such a considerable time beyond what was reasonable and necessary for the purpose for which they were submitted to them.

Whether the committee have not money to pay the premiums, or whether, having the money, but not intending to carry out the work, it is hoped the matter

may die out and be forgotten, leaving them in possession of a gallery of engineering designs, I cannot pretend to say; but one or other of these conclusions would appear inevitable. "A NON-EXPECTANT."

*** The course which has been pursued is very discreditable to the committee. Some of the gentlemen forming it can scarcely have given the subject a thought, or a decision would long since have been come to.

Books Received.

Elementi di Architettura Gotica: Elements of Gothic Architecture. By COUNT EDOARDO MELLA. Vercelli: Guglielmoni, 1863. Two large folio volumes, with numerous plates.

COUNT MELLA, a professional architect, well known for his skilful and learned restoration of the cathedrals of Casale, Saluzzo, and Acqui, and who is now engaged in the erection of a new Basilica, on the model of those of the primitive ages, at Berghem, in Norway, has, after thirty years' studies and practice, published this work, which analyses, both practically and theoretically, the principles and laws which directed the erection of the Mediæval buildings throughout Europe. Count Mella has availed himself, for this purpose, not only of the various hints scattered through the writings of ancient authors, but also of the practical experience he has acquired in his travels through every part of Europe, during which he made a most complete collection of drawings of all its Gothic monuments. This archæological work has a mathematical character at the same time, and gives detailed drawings and specifications of even accessary constructions.

VARIORUM.

A DISCOVERY concerning Ghosts; with a Rap at the Spirit-rappers. By George Cruikshank. Arnold, 86, Fleet-street. In these days of so-called "spirit" manifestations, and "ghost" revivals, with a legion of mischievous though merely subjective "devils," as it were, let loose upon society, the good-humoured ridicule of the whole affair by George Cruikshank is well timed and may do good. Mr. Cruikshank, however, is wholly mistaken in thinking that no one but himself has ever thought of the absurdity involved in the apparition of ghosts of old clothes. This has long and often been urged in argument against the modern spiritualists, so far as they patronize the orthodox "ghosts," as well as, longer still, against ghost believers in general. We are persuaded, however, that ridicule will not put down the "ghosts" so effectually as science is capable of doing. Sir David Brewster explains the phenomena of ghosts as being of the nature of *images* projected on the retina from the brain, and *seen* with the eyes open or shut; and Hibbert, in his "Theory of Apparitions," had many years before broached the same idea. That this is really the general nature of such "spiritual" representations as "ghosts" was *practically proved*, so long ago as the year 1839, at Edinburgh, and also at Glasgow in 1843, by the author of the recent articles on Geometrical Symbols in the *Builder*; who then showed *how to raise such ghosts*, almost at will, by the fixture, for a time, of the eyes of susceptible persons upon almost any outward object, but especially on a mirror, or other polished surface even though not reflective.

Miscellanea.

LIGHTNING CONDUCTORS.—The Bishop's Waltham Clay Company have made a brick with a hole through a moulded portion of it, for the purpose of securing lightning conductors. The material, of which the brick is composed, appears to be of admirable quality.

WORK FOR CONVICTS.—The construction of a railroad from Dartmoor Prisons to Okehampton, there to join the projected central line of the South-Western Company, is in contemplation. The line would be about twelve miles in length, and almost a level plane. The works will be done by convict labour.

INDIGO SUPERSEDED.—At Elbœuf, in Normandy (a seat of the broadcloth manufacture), a newly-devised chemical combination has been discovered, which is said to produce a brilliant blue, less costly than indigo, if not also a faster colour. It has been brought under the cognizance of our Board of Trade, and may possibly affect a large class of interests in India.

THE SUPPLY OF WATER TO BELFAST.—The *Northern Whig* of Wednesday week says:—"Yesterday, at one o'clock, although the rain fell heavily during the morning, there was not a drop of water coming over the overfall to the basins. About 1⅛-inch was passing through the 'mill-owners' slot.'"

MARRIED MEN STEADIEST.—The Guardians of the Holborn Union have been lately advertising for candidates to fill the situation of engineer at the workhouse with a single man, a wife not being allowed to reside on the premises. Twenty-one candidates presented themselves, says the *City Press*; but it was found that, as to testimonials, character, workmanship, and appearance, the best men were all married men. The guardians, therefore, elected a married man.

RESIDENCES OF CELEBRATED MEN.—With regard to the proposition that the Society of Arts should take up the matter of marking the residences of remarkable men, Mr. John Leighton states that the Board of Works, who name and number the streets, and ought to see to such records, refused permission to artists who wished to place a marble tablet on the house in which J. M. W. Turner was born and lived, in Maiden-lane, Covent Garden, and who had subscribed a sum for that purpose.

WILFUL DESTRUCTION BY BRICKMAKERS.—Last week it was ascertained that no less than from 13,000 to 14,000 bricks had been destroyed by being trampled upon during the previous night, in the brickyard belonging to Mr. John Tetlow, situate in Cow Hill-lane, Ashton. It seems that the bricks made by Mr. Tetlow have, for some time, been the work of various members of his own family only. Notwithstanding this, about two months ago, a large number of bricks were destroyed, but of which no publicity was made at the time. A fortnight ago Mr. Tetlow engaged two additional men, who, although they had applied to be admitted members of the union, for some reason or other were refused; and, Mr. Tetlow having retained them in his service, it is conjectured that he has been made to pay the penalty for so doing. The number of butts demolished is seven, which have taken upwards of three weeks' labour, the cost being 6s. 10d. per 1,000 for moulding, &c., and 1s. 6d. per 1,000 for casting the clay, to which has to be added the payment of quarterage, &c. Mr. Tetlow has offered a reward for the apprehension of the offenders.

MEETING OF THE BRITISH ARCHÆOLOGICAL ASSOCIATION IN LEEDS.—The British Archæological Association will hold its 20th anniversary in this town during the ensuing month, the proceedings being commenced on Monday, the 12th of October, and extending to the Monday following. The president of the association is Lord Houghton (late Mr. Monckton Milnes). The arrangements for the meeting devolve upon the council of the Leeds Philosophical Society, as the local committee. Papers will be read on various topics interesting to archæologists and antiquaries, and excursions will be made by the members, amongst other places to Ripon and Fountain's Abbey, Adel, Farnley, Ilkley, Harewood, Wakefield, Pontefract, Boroughbridge, Aldborough, Kirkstall Abbey, Halifax, and York, each of them presenting a wide field of attractive study. The list of papers is a good one.

ASSESSMENT OF RAILWAYS, GAS, AND WATER COMPANIES.—The recent decisions in the Court of Queen's Bench upon the subject of rating railways and other companies who either destroy rateable property or occupy land and premises beneficially, have induced several of the metropolitan parishes entirely to revise their assessments in this particular. The assessment rate and appeal committee of the parish of St. Pancras have therefore taken into consideration the subject in relation to the assessment of the London and North-Western, the Great Northern, the North London, the Midland, the Metropolitan, and the Hampstead Junction Railway now existing or in course of progress in that parish; as also the Imperial and Chartered Gas Companies, the New River and West Middlesex Water Companies, the Electric Telegraph and the London Cemetery Companies; and they find that the assessment on the rate made on the 11th of April of the present year was 63,936*l.*, a sum totally disproportionate to the amount of land and premises occupied beneficially, or of property destroyed; and they have therefore recommended to the representative vestry to increase the assessment upon these properties by a sum of 30,542*l.*, or in the aggregate to the sum of 94,478*l.* The recommendations of the report have all been adopted.

NEWINGTON BUTTS NEW VESTRY HALL.—At a vestry meeting of the parish of St. Mary, Newington, the tender of Messrs. Chinnock & Co., for the erection of a new vestry hall for the sum of 6,240*l.* was accepted. An amendment that Bath stone instead of Portland should be used, was wisely negatived by a majority of 34 to 4.

TOMB OF LEONARDO DA VINCI.—The *Gazette des Etrangers* says:—"An important discovery in the history of art has just been made. A few months back M. Arsène Houssaye was commissioned by the State to direct researches at Amboise (Indre-et-Loire), with the object of finding the tomb of Leonardo da Vinci, the position of which was unknown. Last week the pursuit was crowned with success. A sort of case, found in an old church at Amboise, and containing a coffin, was pointed out to the notice of M. Houssaye. An inscription on the lid of the coffin is said to leave no doubt of the authenticity of the remains which it contains. Thus are refuted, as was expected, the suppositions that Leonardo da Vinci had died elsewhere than at Amboise."

STRIKES IN THE NAIL TRADE.—Those men, women, and children who make the nails called "thousand nails," greatly outweighing in number any engaged in any other branch of the nail trade of the districts known as Coseley Coppice, Sedgley, Lower Gornal, Upper Gornal, Cotwall End, &c., have given notice of a strike for a rise of 10 per cent. on present prices. The makers of horse-nails have given notice for a rise of 6d. per cwt. Some masters say it is only for 3d. An advance of 6d. has been made in some quarters. At present the masters have large stocks on hand, and can wait for many weeks, unless there should come a great and sudden demand. With respect to the common nail makers it is not improbable that differences which exist will shortly be settled. In some districts the men have never left work.

CASTLE-HILL IMPROVEMENTS, NORWICH.—At an inquiry to ascertain and assess the value of a dwelling-house and premises in Golden Ball-street, required for the contemplated improvements there, an offer had been made by the corporation of 500*l.*, which had been declined. The corporation took the whole property, when they wanted only the front portion, and the purchase-moneys of the premises in the three last conveyances were 499*l.*, 525*l.*, and 600*l.*: they had also been mortgaged for 400*l.* The owners valued the property at 600*l.*; Mr. J. Grand had unsuccessfully offered 600*l.* for it; Mr. W. Browne (builder), thought it was worth 80*l.* a-year rental, and would sell for 500*l.*; Mr. D. Balls estimated its value to a willing purchaser at 600*l.*; Mr. S. W. Spelman thought the corporation ought to give 650*l.* for the property; Mr. J. Lacey and Mr. W. Warman agreed with Mr. Ball's estimate. For the corporation, Mr. Butcher and Mr. Wilde gave evidence, the former of whom considered 460*l.* a fair and liberal price, the latter 500*l.* The jury found a verdict for the plaintiffs for the full amount claimed, 600*l.*

THE LOCAL IMPROVEMENTS UNDER THE PUBLIC WORKS ACT.—The amount of loans to be applied for by the Manchester and Salford corporations is not yet formally announced, but seems to be virtually settled as follows:—Manchester, 250,000*l.*; Salford, 100,000*l.*——The committee appointed by the town council of Stockport are preparing a scheme of public works for the employment of skilled and unskilled labour in the borough, and classifying a number of suggestions for improving and draining existing streets and constructing new ones, to be submitted to the approval of the Home Secretary. The committee and surveyor have had the benefit of the advice of Mr. Rawlinson, in the selection of the works. The system of drainage to be adopted, according to the local *Advertiser*, will be of a highly-improved and scientific character. The cost of the works has been variously estimated at 50,000*l.*, 60,000*l.*, and 70,000*l.*——The Stalybridge town council have resolved to apply for a loan of 3,000*l.*, to be applied in constructing, altering, enlarging, repairing, and cleansing the common sewers, drains, culverts, and watercourses within the borough. The Health of Towns Acts will be adopted, and the council are considering what can be done as to a cemetery and waterworks.——The Ashton town council has resolved to apply for a loan of 76,000*l.*, a first instalment of 5,500*l.* immediately. It is intended to make a main trunk sewer, and to sewer, pave, flag, and otherwise complete several streets.—— We understand that the entire 1,500,000*l.* provided by Parliament for sanitary works in the Manchester district, will be taken up on the terms offered, viz., 3½ per cent., to be repaid in thirty years.

BARRY'S PAINTINGS.—With reference to the steps recently taken by the Society of Arts to preserve Barry's paintings, Mr. Chas. Keene, of 18A, Orchard-street, says he has in his hands, for a similar purpose, Barry's picture, "Alexander and his Physician," which was painted expressly for Edmund Burke. It may be seen by any one who will call. It is little known.

DOCK EXTENSION AT SUNDERLAND.—An important step towards the execution of the contemplated dock extension at Sunderland has been taken. At a special meeting of the Wear commissioners, the seal of that body was affixed to a mortgage for the sum of 50,000*l.*, being the first instalment of the loan of 150,000*l.* from the Public Works Loan Commissioners. The money having now been obtained, the preliminary works will be pushed forward as speedily as possible.

THE PRINCESS'S THEATRE.—London is indebted to Mr. Walter Montgomery for a series of very well acted plays at a time when such things are scarce. The principal part in each has been played by himself, and when we mention *King John, Sir Giles Overreach, Claude Melnotte, John Mildmay,* and the *Duke* in "The Honey Moon," it will be seen that his scope is considerable. His personation of *Sir Giles Overreach* was a remarkably good piece of acting, discriminating and effective. He is unquestionably a great gain, and it is to be hoped that the metropolitan stage will not lose the advantage of his services. The season closes (this) Saturday night with performances for his benefit.

FOOTPATHS AT CHELSEA SUSPENSION BRIDGE.—Within the past week numbers of workmen have been engaged in making improvements at and near the Chelsea Suspension Bridge, under the direction of the Metropolitan Board of Works. The approaches to the bridge on the Middlesex side have been widened and improved, as well as those to the recently finished barracks. It was found that the footways of the bridge were defective, and on examination the wooden blocks were discovered to be in an unsound condition, and inadequate for the purpose for which they were laid down. The Board of Works decided that the blocks should be removed, and in their place the entire footways, &c., are being covered with Seyssel asphalte, by Armani & Co., of Guildhall-chambers. The works are being pushed forward with vigour.

THE LIVERPOOL SCHOOL OF SCIENCE.—Lord Stanley, M.P., presided at the prize delivery of this school of science; and before delivering the prizes, briefly stated the circumstances which attended the formation of the school, and paid a tribute to the liberality of Sir William Brown; the school having its seat in the buildings which were mainly established by Sir William. Speaking of the immediate and practical good to be derived from schools of science, Lord Stanley said the result was twofold—partly it tended to give men practically engaged in various pursuits a knowledge of the principles which they have to apply—it enabled them to work intelligently as men, and not blindly as machines; partly, also, it serves to correct a vague, loose habit of thinking, by a training more strict and severe than that of ordinary life. Even in the education of our upper classes, of those who ought to be the brain-workers, as opposed to the hand-workers of society, too much time is given to the study of the works of man, and too little to those of nature.

MONUMENTAL.—The memorial statue of the late Earl Fortescue, Lord-Lieutenant of Devonshire, has been placed on its pedestal, in the Castle-yard, Exeter. The work is in Sicilian marble, and is from the chisel of Mr. E. B. Stephens, of London, the sculptor of Sir Thomas Dyke Ackland's monument. The figure, which is nearly white, is 8 feet high, and stands upon a pedestal of the same height. The entire height of the monument is 16 feet. The base is of granite, and has been cut by Mr. Easton, of Exeter.——A monument has just been erected on the north side of the chancel of St. Michael's Church, Louth, to the memory of the late Rev. W. Wright, M.A. It consists of a canopied niche, with sculptured panel in the arch above, and a pediment terminating in a carved finial. The slab containing the inscription is of polished serpentine, with gilt letters. Mr. Fowler was the designer of the monument. ——The inhabitants of Stafford are making an effort to obtain subscriptions, to erect a memorial to their townsman, Izaak Walton, of piscatorial celebrity.——It is proposed to erect a duplicate of Foley's Dublin statue of Oliver Goldsmith in London. The statue is 7 feet 6 inches high, and was cast in bronze by Messrs. Elkington. It stands on a granite pedestal 8 feet 6 inches high.

THE NEW ALBION OUTFALL AT BRIGHTON.—The first length of the new iron outfall has been floated to the bed prepared for it below low-water mark. The length first tried was 300 feet (of 1,700 feet in all); but some fear being entertained while floating it that injury to it would result from so long a length being taken out at once, it was cut in two, and the first part has been safely floated out.

THE HARTLEY COLLIERY ACCIDENT.—In connexion with the Hartley Colliery Accident Fund, it is stated that, after making ample provision for all the widows and children who suffered from that terrible catastrophe, a sum of about 20,400*l.* remains unapplied, and that it has been agreed by those having charge of the said fund to distribute this amount in equal proportions to the twelve mining districts of England, Wales, and Scotland.

INJURY TO THE HÔTEL DE VILLE, BRUSSELS, BY LIGHTNING.—During a recent thunderstorm a flash of lightning struck the spire of the Hôtel de Ville of Brussels, and broke one of the turrets of St. Michael's tower into hundreds of pieces. The *débris* fell into the court of the Hôtel de Ville, and upon the Grand Place. No person was hurt. This is the third time within the last few years that the Hôtel de Ville has been struck by lightning. The expense of the restoration of the building is estimated by the engineer of the city at 10,000fr.

OPENING OF THE BAXTER PARK, DUNDEE.—As previously announced, this park has been inaugurated with great ceremonial, and formally handed over by Sir David Baxter to the trustees for its conservation. The day was held as a complete holiday. Earl Russell was present, and received the freedom of the town. The park occupies the space of 38 acres, and is said to be tastefully laid out. In the centre stands a pavilion, in the Italian style, built at a cost of 6,000*l.* The cost of the park, its embellishments, and the sum set apart by the donor for its maintenance, cannot be less than 50,000*l.*

LIVERPOOL INSTITUTION OF FINE ARTS.—The first exhibition held under the auspices of this new body has been opened to the public in Old Post-office-place. If the value of the Institution is to be judged by the number of works of art which have been brought together, its importance, according to a local paper, has been established. The collection is large and varied, twelve hundred and forty-one works being shown in the rooms, which are very much crowded, and even the staircase is filled. The collection includes specimens of the productions of favourite artists of the day, both British and foreign, and many works have been excluded from want of space for exhibiting them. At the private view on Saturday last, notwithstanding the unfavourable nature of the weather, the galleries were crowded by an assemblage of ladies and gentlemen of the first position and influence in the town.

RAILWAY MATTERS.—The traffic receipts of railways in the United Kingdom amounted, for the week ending the 29th of August, on 10,882 miles, to 641,770*l.*, and for the corresponding week of last year, on 10,428 miles, to 637,615*l.*, showing an increase of 454 miles, and of 4,155*l.* in the receipts.——The Bristol and South Wales Union Railway has been opened for public traffic. The carriages placed on the line are those lately released from the Metropolitan Railway. There is a good deal yet to be done on the Welsh side, but the work is being pushed on. A station will be soon erected at the Portskewet Junction. The line will be of advantage to Bristol and neighbourhood.——The Rev. W. R. Bowditch, of Wakefield, is said to have discovered a process by which railway carriages can be illuminated cheaply and simply with a bright and steady light. By the application of Mr. Bowditch's apparatus each foot of gas is said to give 5½ times as much light as given under ordinary circumstances. As described, the process seems merely to be one of those in which gas is impregnated with hydro-carbonic vapours. The gas, before being burnt, is passed through an air-tight box, containing hydrocarbons of high density. These are heated by the burning gas, and so are volatilised in the box. The gas, in its passage through the box, carries with it a part of the vapour, the carbon of which renders the gas highly illuminating. The hydrocarbons cost about 1d. a pound, and about 1½ lb. is sufficient for two lights for a week. The apparatus is at work in one of the lamps at the Wakefield railway station, and the light from it is said to be brighter than that from the lamps adjoining. We understand that the invention is being tried on some of the principal railways.

GOVERNMENT SCIENCE SCHOOLS AND CLASSES, 1863.—The total number of individuals under instruction in 1863 was 3,811, and in 1862, 3,413: of these 869 were in uncertificated classes last year, and about 700 this, making the increase in students in certificated classes between May, 1862, and May, 1863, 566. The total number of individual candidates who applied for examination in 1863 was 2,000, and in 1862, 1,708.

NEW WATER-WORKS FOR BRECON.—At a recent meeting of the Brecon local Board of Health, a report having been read, it was agreed that it was necessary to have a sufficient supply of pure and wholesome water for the inhabitants of the town, and that such supply of water be confined, preferably, if not absolutely, to the source at Rhydgoch, on or near the spot indicated by the town surveyor. It appears that the estimated cost of the works does not exceed the sum of 4,600*l.* Mr. Isaac Davies was appointed surveyor and engineer, at a salary of 125*l.*, with the use of Mr. Bert's map, plans, &c., of the borough.

SUTTON, near the Station.—PLOTS of FREEHOLD BUILDING LAND FOR SALE. Land-tax redeemed, conveyance free Also, PLOTS TO BE LET, on a Building Lease, for ninety-nine years —For plans, &c. apply by post, pre-paid, to Mr. TRIBE, Builder, Sutton, Surrey, S.

TO CONTRACTORS, BUILDERS, BRICKMAKERS, and OTHERS.— WHITTLESEY, CAMBRIDGESHIRE.—TO BE SOLD, by Private Contract, a very superior and extensive BRICK AND TILE MANUFACTORY, situate about two miles from the town of Whittlesea and four miles from the City of Peterborough, recently fitted up at a very considerable cost with Machinery, Buildings, and every other requisite for carrying on a most extensive business. The Brickfield extends over 9 acres of land, and contains many thousand cubic yards of coarse Gravel and sharp Sand, with an inexhaustible supply of best Clay, which is perfectly free from stones and rubbish of every description. The Machinery, which is in first-rate working order, and arranged with a view to the utmost economy of labour, consists of a highly finished Condensing Beam Engine of 12-horse power, Hoisting Drum and Tackle, Tipping Waggons, Crushing Rollers, necessary Pumps and Tanks; one of Ainslie's Brick and Tile Machines, capable of making from six to eight thousand Bricks, or twelve thousand two-inch Pipes per diem; and also one of Lowndes's Patent Brick and Tile Machines, only recently erected, which is capable of producing and making eighteen thousand solid bricks, or twenty-eight thousand two-inch pipes in ten hours. The Buildings consist of Office, Pattern Store, Pantile and Flued Sheds, upwards of two thousand superficial yards of drying Sheds for bricks and tiles, together with Pot and other Kilns capable of burning one hundred and twenty thousand bricks at a time. The high road leading from Whittlesey to Peterborough skirts the yard; and the Great Eastern Railway forms its south-western boundary, and is connected with it by a siding; a private Wharf on the River Nene, belonging to the property, and not more than a quarter of a mile distant from it, affords direct water communication with Peterborough, Thorney, March, Wisbech, Ely, the Holm Station on the Great Northern Railway, and the whole of the Fen districts. An acre of Land adjoining, together with three Brick and Tile tenements is suitable for the dwellings of men working at the yard, standing thereon, may, if desired, be purchased at the same time. A considerable portion of the purchase-money can remain on mortgage of the Estate, if required. The Machinery may be seen in motion by giving twenty four hours' notice to Mr. EDWARD LOOMES, Whittlesey; from whom also leave to view the Premises may be obtained on application.—For price and further particulars, apply to Mr. PEED, Solicitor, Whittlesey.

FARNBOROUGH and ALDERSHOTT FREEHOLD and GROUND-RENT SOCIETY (Limited).—TO BUILDERS and OTHERS.—Land on this Society's Estate at Farnborough, TO BE LET on building leases, or TO BE SOLD, upon advantageous terms.—Particulars may be had of the Architect, Mr. H. CURREY, 4, Lancaster-place, Strand, W C ; or at the Offices of the Society, 18, New Bridge-street, Blackfriars.

EDWARD CHATFIELD, Managing Director.

BARKING, ESSEX.—TO BE SOLD or LET, the whole or part of 10 acres of FREEHOLD BUILDING LAND, adjoining the Railway Station, fifteen minutes from Fenchurch-street, and with water carriage close by, affording a rare opportunity for manufacturers requiring extensive space, but equally suitable for a public institution, or for the erection of moderate-sized houses The situation adjoining the stations affords the power of extending railways, in connexion with the existing line, all over the premises, and the soil is gravelly and perfectly dry. If sold, nine-tenths of the purchase money may be paid by instalments, with 5 per cent. interest, but the whole or any part may be paid off at any time without notice —For particulars, apply to Mr. WHITTINGHAM, 14, Moorgate-street, London, E.C.; or to Messrs. RUSSELL & DAVIES, 59, Coleman-street, London, E.C.

TO BUILDERS, CONTRACTORS, and OTHERS.—MAINDIFF COURT ESTATE, near Abergavenny. Several PLOTS of FREEHOLD LAND (part of the above-mentioned estate) are TO BE SOLD, or LET on BUILDING LEASES, for the erection of first-class villa residences. This estate affords superb sites for houses, commanding beautiful prospects of the adjacent mountains, and part of it will be divided into convenient pieces of land, ranging from four to eight acres each, to be let, at moderate ground-rents, or to be sold Good family houses, with land attached, are in great demand in the neighbourhood. This estate is situate within one mile of the town of Abergavenny, on the turnpike-road leading to Skenfrith.—For further Particulars and cards to view, apply to Messrs. GABB & WALFORD, Solicitors, Abergavenny.

THE Spacious GALLERY of the Society of British Artists, Suffolk-street, Pall-mall East, consisting of five large rooms, TO BE LET until the end of February.

T. ROBERTS, Secretary.

TO BUILDERS.—TO BE LET, on Building Leases, the FRONTAGES on the Vicarage Road, Camberwell, opposite St. Giles's Church, on the main road to Peckham, in plots to suit applicants, at very low ground rents Eighty-seven years' lease for houses in great demand.—Apply to Mr. G. MURPHY, Church-street, Camberwell.

TO BE LET, by the Year or on Lease, within a short distance of London Bridge, Surrey Side, convenient PREMISES. Frontage 80 feet, average depth 90 feet. May be used as at present, or the buildings may be taken down and a warehouse erected on the site Money advanced by the freeholder if required —For particulars apply to Mr SUGG, Builder, 12, Parker's Terrace, Bermondsey, S.E.

TO BUILDERS and OTHERS. -BUSINESS PREMISES, LIMEHOUSE. — TO BE LET, by the Freeholder, in one lease, for sixty years, from Lady-day next, FREEHOLD SHOPS, BUILDINGS, and FRONTAGE, extending to 300 feet, at the corner of Salmon's-lane and Rhodeswell-road; besides Three small HOUSES, forming Farmer's row, adjoining; in the respective occupation s of Mr. Farbery, corn-handler. Mr. Almy, fish monger, Mr. Halls, greengrocer, &c. &c —For particulars and forms of Tender, apply to Messrs. C. SELF & SON, High-street, Poplar; or to Messrs. TIDMARSH & SONS, 236, Upper-street, Islington, N. Tenders must be delivered on or before NOVEMBER 1.

THE LOWESTOFT IMPROVEMENT ACT, 1854.—Eligible BUILDING LAND, commanding most extensive and uninterrupted views of Lowestoft and Yarmouth Roadsteads. -The Commissioners acting in execution of the above Act have determined to OFFER the piece of "LAMP LAND," on the Cliff, comprising about 7 acres, lying to the north of and adjoining the Ravine beyond the High Lighthouse, Lowestoft, upon a Building Lease for ninety nine years. Ground rent moderate —For further particulars apply to Mr. W. F. BEAGO, Clerk to the said Commissioners, High-street, Low stoft.

GROUND in BASINGHALL-STREET, now occupied by Houses and Warehouses, known as Nos 23 and 24, Basinghall-street, TO BE LET by TENDER, for Building purposes A plan of the ground and form of Tender may be obtained at the Offices of EDWARD PANSON, Esq, No 7A, Lawrence Pountney-hill, Cannon-street, or of Messrs HOLLINGSWORTH, TYERMAN, & GREEN, No. 24, Gresham-street, London; where Tenders, under seal, are to be delivered on or before the 14th OCTOBER next. The Owner does not bind himself to accept the highest or any Tender.

TO TIMBER MERCHANTS and OTHERS. TO BE SOLD, by PRIVATE CONTRACT, a first-class SITUATION for almost any Business, and especially for a Timber Merchant, where an extensive business has been carried on for many years, near to Bargate Bridge, Boston. The Premises have been fitted up with Machinery of a superior description within the last few years. A steam engine, capable of working up to 20-horse power, with excellent boiler, vertical saw frame, circular saw benches, timber frame, moulding and planing machines, a superior tenoning machine, &c. &c. On the Estate there are two tenements, offices, and other things required to enable an active man to do a first-class business. The Estate and Machinery will be sold either together or divided, to suit purchasers.—Application to be made to Mr. WILLIAM STAINTON, the proprietor, to view and treat for the Property Boston, September 16th, 1863.

A PIECE of GROUND WANTED, to PURCHASE or RENT on long lease, not less than 180 feet by 60 feet, within half a mile of the South Kensington Museum, for establishing head quarters for the 1st Middlesex Engineer Volunteers. Ground with old buildings would not be objected to —For particulars apply to Major HARVEY, 71, St. George's-road, Pimlico, S.W.

TO BE LET or SOLD, a PIECE of GROUND, 135 feet by 65 feet, near the Stratford Station, suitable for Cottages or a Manufactory —For particulars apply at the Office of the White Horse Cliff Slate Quarries, 1, Sun-court, Cornhill.

ELIGIBLE FREEHOLD BUILDING LAND, in KENT, within one mile of two stations on the North Kent Railway, and thirty minutes' ride thence to London Bridge and Charing cross.—TO BE LET or SOLD, in large or small plots, from TEN to TWENTY ACRES of MEADOW LAND, on the high London road to Erith, admirably adapted for gentlemen's residences and villas, delightfully situated, with fine views of the county and River Thames, near a church, gravelly soil, good water and gas laid down. Ground-rent moderate.—Apply to Mr. DAVENPORT, Land and Estate Agent, 35, Bucklersbury, City, E.C.

BUILDING GROUND, with a Frontage of 337 feet, close to the New Teddington Station, TO BE SOLD, together or in lots, or granted on Building Leases at 4d. a foot.—Apply to Messrs. TERRELL & CHAMBERLAIN, No. 30, Basinghall street, London.

Apply for prices, &c. to

OCTAVIUS N. SIMPSON, STAMFORD;

and see Specimens at the Office of

Messrs. PINDER SIMPSON & SONS, 29, Savile-row, London, and at the Museum of Practical Geology, Jermyn-street, W.

This stone (which is a perfect colite), is raised in blocks of any portable size, and is about four feet thick in the bed. It will stand ANY WEATHER, is much used for water-works, and for the building and restoration of churches. When used as ashlar work it is not necessary to place it bed-wise. It works freely with a tooth-saw, and is wrought at a cheaper rate than any stone in the kingdom.

WILLINGTON STONE WHARF,

REGENT'S PARK BASIN.

HY. GEORGE & CO.

The late Proprietor is now conducting the business of the above wharf as the Managing and Resident Agent (Mr. JOSEPH CHADWICK).

BARTLETT, BROTHERS, & CO.

DEVONSHIRE WHARF, CAMDEN TOWN, N.W.

PATENT INDURATING SOLUTIONS,

For the Preservation of Stone, Cement, &c.;

PATENT SILICEOUS PAINT, FOR COATING BRICKS, CEMENT, &c.

FIRE-PROOF VARNISH,

For Internal Wood Work, Roofs, and Church Work generally. This Varnish renders Wood Uninflammable, and Preserves it from Decay.

THE FLUO-SILICIC STONE-PRESERVING COMPANY, LIMITED.

39, CHARING CROSS, S.W. & 12, COPTHALL COURT, THROGMORTON STREET, E.C.

PATENT FLUO-SILICIC INDURATIONS for the PRESERVATION of STONE, CEMENT, and other like materials. The Company apply to the surface of Stone, Cement, &c. a solution of Fluo-Silicic Acid, and silicate of Potash. These are the only patents which embrace the use of that most valuable agent, Fluo-Silicic Acid. Bath, Caen, and other soft stones, when treated by the Company's solution, become extremely hard. The great expense of high ornament to buildings in hard stone has been an obstruction to Art; but since the Fluo Silicic process can be applied so readily to soft stone after it is carved, that obstruction exists no longer. The Fluo-Silicic at once permanently arrests the decay of all stone.—For further information, apply to the Manager of the Company, Mr. DUDLEY, Architect, as above.

VENTILATION—PURE AIR.

Sheringham's Day and Night Ventilator

for the admission of Pure Air.

THROUGH THE EXTERNAL WALL.

These Ventilators are arranged so that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 167 and 169 (late 117 and 118), Union-street, Borough, London.

THOMAS LAMBERT & SON,

Self-Regulating Pan Closet. Lambert's Ball Valve. High-Pressure Bib and Stop Valve.

PATENTEES and MANUFACTURERS, SHORT STREET, NEW CUT, LAMBETH.

T. L. & SON find it necessary to state that their manufactures have their NAME legibly marked thereon.

NOTICE OF REMOVAL.

MESSRS. COLLINS & GREEN

Beg to advise their Friends and the Profession that as the London, Chatham, and Dover Railway have taken their late premises at Albion-place, for the new Blackfriars Station, they have Removed their extensive Stock of

MARBLE CHIMNEY-PIECES, STOVES, RANGES, &c.

TO THE ROTUNDA, No. 3, BLACKFRIARS ROAD.

C. & G. have now, as heretofore, the best and most varied assortment of first-class Goods in their trade, of every description and at every range in price.

They respectfully invite a visit from Architects and Builders to their present Show Rooms, which include an area of upwards of 12,000 super. feet, and replete with every Architectural requirement in Marble or Iron.

ROTUNDA GALLERIES, 3, BLACKFRIARS ROAD.

CITY WAREHOUSE, 38, NEW BRIDGE STREET, BLACKFRIARS.

MANUFACTORY, LETT'S WHARF, and OLD SHOT TOWER WHARF, LAMBETH.

Estimates given for every description of Marble or Iron Work.

GENERAL IRONMONGERY, AND BATH-WORK, &c.

Hot Water and Range Work, all requisites being kept in Stock.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 49 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor.

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.

CROGGON and CO.'S PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c. and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c. preventing the radiation of Heat, saving 25 per cent. of Fuel, and deadening Sound.

Samples, testimonials, and full instructions, on application to

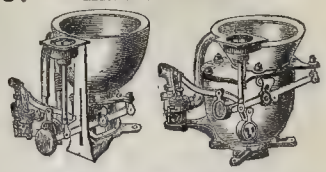
CROGGON and CO. 2, DOWGATE-HILL, London; and 2, GOREE PIAZZA, Liverpool.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere

ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Baryte from ten to thirty per cent. Why they sold under the name of "Improved Zinc Paint," or as the number Two or Three qualities, no workman can produce good work with such materials. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.

CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.



EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK & SON,

WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

J. TYLOR & SONS' PATENT

REGULATOR WATER-CLOSETS.

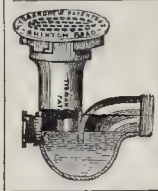
Valve. Pan.

The Regulator Valve gives perfect control over the supply of water to each closet, so that, however small the fall of water, perfect flushing is insured. Any number can be worked by one supply pipe. No cistern-valves, cranks, or wires required. The Closets can be seen in action at the Manufactory, and Illustrated Catalogues had on application to the Manufacturers, J. TYLOR & SONS, Warwick-lane, Newgate-street, London

INTERNATIONAL EXHIBITION, 1862.

CLASS 35, NO. 6849.

3s. 9d.



The ONLY MEDAL "for STONEWARE" has been awarded to DOULTON & WATTS, LAMBETH POTTERY, LONDON

In expectation of a greatly increased sale, D. & W. have determined to introduce the patented pattern of their ENAMELLED STONEWARE CLOSET-PANS, at the price of the commonest description of earthenware.

Experience has shown that this shape is the most simple and efficient, and that in strength, durability, and cleanliness, it cannot be surpassed by the most expensive closets.

FIGURE "D" STONEWARE CLOSET PAN AND TRAP, 3s. 9d. COMPLETE.

TYE & ANDREWS' NEW PATENT SINK TRAP is universally admitted to be the only perfect Trap for Sinks in Domestic Dwellings, as fixed at the principal Institutions. IN BANKRUPTCY.—TO FURNISHING IRONMONGERS AND OTHERS.

MESSRS. FULLER & HORSEY are instructed by the Assignee to SELL by AUCTION on the PREMISES, No. 1, Albert-terrace, Bishop's-road, Paddington, on THURSDAY, SEPTEMBER 24, at TWELVE precisely, the STOCK of a FURNISHING IRONMONGER; including a panned toilet sets and tidrays, moderator lamps, plated and metal kettle covers and teapots, fenders, stoves, register stoves, fire irons, bells, cornice poles, brass and iron curtain pins, 2½ feet sweetish bronzed quantity of slating, tiles, about 1½ squares of white, yellow, Christiania, and spruce prepared floor boards and match lining, 1,000 feet 4-inch birch, 1,000 feet birch planks, 2 to 6 inch, 10,000 feet Riga pine in deal and whitings, 10,000 feet 1-inch spruce in sale and whitings, 2,000 feet Spanish and Honduras mahogany ditto, pitch, frames, and crosses of saws, pulley saws and rollers, double purchase timber-jack, 2 trucks, and numerous other effects.—May be viewed the Saturday preceding and Morning of Sale, when Catalogues may be had on the Premises; and of Messrs. FULLER & HORSEY, 13, Billiter-street, E.C.

VALENCIA SLATE SLAB QUARRIES, COUNTY KERRY, IRELAND.

MESSRS. FULLER & HORSEY are instructed to SELL by AUCTION, at the AUCTION MART, London on WEDNESDAY, OCTOBER 28 at TWELVE, in one lot, unless an acceptable offer previously made, all that valuable and extensive QUARRIES and MILLS of the VALENCIA SLATE SLAB COMPANY, situate in the Island of Valencia, County Kerry, Ireland. The works have been carried on by the present company for about fourteen years, and a very large outlay has been made in opening the quarries, and in erecting the mills and the requisite machinery. The quarries are situate on the side of a mountain, about 1,200 feet above the sea level, and an opening has been made for working about 12 feet wide, running into the mountain to about the same depth, uncovering a succession of platforms of slate of various widths. The slate rises most conveniently for working at an angle of about 35 degrees, and has a regular cleavage. The slabs are severed by wedges instead of by blasting, thus avoiding the large amount of waste occasioned by the latter process. The roof of the quarry is self-sustained, and is perfectly secure. The quality of the slabs is now well known, and appreciated, and has found a large reputation by the principal merchants in London and elsewhere. They have a beautiful and permanent polish, are particularly valuable for enamelling, are unaffected by any variety of furnace heat, and are used in larger sizes than from any other quarry. The slabs from the small blocks is made into roofing slates, for which there is ample local demand. The plant consists of a steam engine of 40 horse power, but by a comparatively small outlay in an extension of the engine this quantity may be doubled, the machinery at the mills being equal to prepare that quantity, and is adequate at the present time being in excess of the capabilities of supply.

The mills are situate about 2½ miles from the quarries, are connected by a good road of easy descent, which is kept in repair principally at the expense of the county; but every facility would be afforded by the Knight of Kerry, who is the freeholder, for laying down a tramway by the side of the present road, which would much lessen the cost of transit. The mills are most advantageously placed, being immediately contiguous to the pier, at which vessels of 500 tons burden can load alongside, and there are no pier dues nor wharfage payable. The harbour of Valencia is both safe and commodious, and freights to London are about the same as from the North Wales ports. The harbour is open at all times, and is perfectly sheltered. They are fitted with sawing and planing machinery of the best description, fitted by Blyth, of Lincehouse; and there are overhead cranes, tramrails, and every appliance for saving manual labour. There are also ten dwelling houses, manager's residence, and about thirty-five acres of farm land. There is a plentiful supply of water for the purposes of the mills, from large reservoirs at the quarries, and works are held by lease from the Knight of Kerry for ever at a rent. The present Company have expended upwards of £10,000 on the property. The Lease will be produced, including the requisite deed, at market fair, the slabs, and have it ought to possess the valuable and uniform character of the slate, and the extent to which the workings may be carried: and they have supplanted and fitted the most modern machinery for the production of the slate for market, and it is confidently believed that the Works are now in that state that, in the hands of two or three individuals very little further outlay will be anticipated.—The Works may be viewed by Cards only, which, with further particulars, may be had of Messrs. PALMER, NETTLESHIP, & KLAND, Solicitors, 4, Trafalgar-square, W.C.; at the *Midland Counties Herald* Office, Birmingham; at the Grosham Hotel, Sackville-street, Dublin; at the Railway Hotel, Killarney; at the Adelphi Hotel, Liverpool; at the Mart, London; and of Messrs. FULLER & HORSEY, 13, Billiter-street, London, E.C.

AT GARRAWAY'S COFFEE-HOUSE, Cornhill, on WEDNESDAY, 30th SEPTEMBER, at TWO o'clock,—

TIMBER, 5,40 Loads, Foreign and Colonial.
DEALS and BATTENS 100,400 Pieces ditto.

That the balance of undivided profit was increased by the Sum of	25,723	9 7
That the Invested Funds of the Company amounted to	1,417,898	8 4

In reference to the very large increase of 75,000*l.* in the Fire premiums of the year, it was remarked in the Report, "The Premiums paid to a company are the measure of that company's business, and a large share of that part, and often is, re-insured with other offices. In this view the yearly addition to the Fire premiums of the Liverpool and London Company must be very gratifying to the proprietors."

SWINTON BOULT, Secretary to the Company.
JOHN ATKINS, Resident Secretary, London

R. W. JELF, D.D. Principal.

NOTICE

BROWN & GREEN'S KITCHEN RANGE WAREHOUSE will shortly be REMOVED to the NEW PREMISES, 73–74, Bishopsgate-street Within, a few doors from the present establishment. These will afford accommodation for a full larger stock of their Patent Prize Medal Ranges and Stoves, Register Grates, and Cooking Utensils, to meet the great public demand; and also for the consequent more extensive execution by the manufacturers themselves, of all descriptions of hot water, bath, laundry, and steam work.
81, Bishopsgate-street Within, July, 1863.

COMPETITIONS.

TO ARCHITECTS.—COVENTRY and WARWICKSHIRE HOSPITAL.—The Committee of the above Hospital are desirous of receiving PLANS for a NEW HOSPITAL, to be built in the city of Coventry. The outlay not to exceed 7,000l. inclusive of fencing and draining. To provide accommodation for fifty beds for in-patients, baths, a waiting-room for out-patients, two consulting rooms, house surgeon's and matron's rooms, servants' rooms, operating-room, dispensary, board room, and other requisites for a hospital. The plans to be so arranged as to allow of future extension. Ground plans will be supplied on application to the Secretary. A premium of 20 guineas will be awarded to the second best design.—Plans to be sent in to the Secretary (each Plan bearing a motto and accompanied with a sealed envelope corresponding with such motto, and containing the name of the architect) on or before MONDAY, the 23rd day of NOVEMBER next.
Coventry, Sept. 15th, 1863. ALFRED J. SODEN, Secretary

DESIGNS for "RAISING HOLBORN VALLEY."—To ARCHITECTS, ENGINEERS, and OTHERS. Notice is hereby given, that the Improvement Committee of the Corporation of London will meet at Guildhall on MONDAY, the 19th day of OCTOBER next, at ONE o'clock precisely, to receive DESIGNS, with descriptions, plans, sections, and estimates, for "RAISING HOLBORN VALLEY," and making such alterations and improvements in and adjacent to Holborn hill and Skinner street as would tend to the convenience of the public and to the economization of the metropolitan traffic. The plans of the streets and suggested improvements to be drawn to the same scale as a plan of the locality which may be obtained at the Architect's Office, Guildhall, upon payment of 5s.; the property required to be taken to be coloured red on the general plan. Premiums of 250l. and 150l. respectively, will be given for the most approved designs. Such designs will become the property of the Corporation; but the Corporation do not engage to employ in the execution of the work either of the persons who may be appointed. The several designs, with all necessary accompanying documents, must be delivered at the Town Clerk's office, Guildhall, by TWELVE o'clock at noon precisely, on the above-mentioned day, sealed up and endorsed, "Holborn Valley."
WOODTHORPE.

SAINT WINEFRED'S WELL, HOLYWELL.—To ARCHITECTS and OTHERS.—The Local Board of Holywell having determined upon constructing NEW BATHS and improving and altering the present Baths and Premises of Saint Winefred's Well, Holywell, hereby offer a PREMIUM of THIRTY POUNDS for the TWO BEST PLANS, viz. FIFTEEN POUNDS each, one plan for the improvement and alteration of the existing baths and premises adjoining, excluding the site of the mill and brewery; the other plan to comprise the same premises as above, including the site of the mill and brewery; such plans to be accompanied with sections, elevations, specifications, and estimates. If the architect of either of the successful designs be employed to carry out the work, the premium to be merged in the commission. All particulars and information may be obtained upon application to the undersigned. The designs to be sent in on or before the 31st day of OCTOBER next, under motto, with sealed envelopes addressed to
WM. DAVIES, Clerk to the Holywell Local Board.
Holywell, September 14, 1863.

CONTRACTS.

TO CONTRACTORS.—In consequence of the Death of the late Contractor, Sealed TENDERS will be received by the Secretary of the Bridge Committee of the Town of Drogheda, from the date hereof up to and upon THURSDAY, the 15th day of OCTOBER next.
For taking down the present Bridge over the River Boyne, at Drogheda, and Building in place thereof a Stone Bridge of Eighty Feet Span.
According to Plans and Specification prepared by J. NEVILLE, Esq., C.E. to be seen at my Office, Fair-street, Drogheda; or at the Office of the Engineer, Jocyn-street, Dundalk, between the hours of TEN and FOUR o'clock every day (Sundays excepted) after this date. The Lowest or any Tender not necessarily to be accepted.
Dated at Drogheda, this 27th day of August, 1863.
HENRY CLINTON,
Secretary to the Bridge Committees of the Corporation Harbour Commissioners and Grand Jury of Drogheda.

TENDERS WANTED for SIXTY-FOUR THOUSAND BRICKS.—12,000 Stocks or Grizzles, 42,000 Place, and 10,000 Old Bricks, at per thousand, delivered near the Waterworks, Battersea Fields. Tenders wanted for the BRICKWORK of FOUR HOUSES, Labour and Scaffolding only.—Apply to Mr. LLOYD, No. 54, Hanley-street, Battersea-fields, London.

TO CONTRACTORS. — HAILEYBURY COLLEGE.—TENDERS are required for certain DRAINAGE and EARTH WORKS, on land at Haileybury College, Herts. Persons willing to Tender may see the plans, sections, and specification, and obtain copy of quantities, at the Offices of JOSIAH FORSTER FAIRBANK, C.E. 30, Parliament-street, Westminster, S.W. on and after the 1st OCTOBER, until 8th OCTOBER, from ELEVEN to FOUR each day.—Tenders, endorsed "Tender for Earth Works," addressed to the Steward, Haileybury College, Hertford, to be sent in at NOON, on the 9th OCTOBER. The Lowest or any Tender will not necessarily be accepted.
30, Parliament-street, Westminster, September 21, 1863.

CONTRACTS.

TO BUILDERS and OTHERS.—Persons desirous of TENDERING for the EXECUTION of the whole or any portion of the WORKS of the proposed MASTERS HOUSES, in connection with the Clifton College, can inspect the plans and specification upon application to the Architect, Mr. CHARLES F. HANSOM, from MONDAY, the 28th instant, to SATURDAY, OCTOBER 3rd. The work has been separated into trades, or parts, and can be had of Mr. J. A. CLARKE, Bond-street. Sealed Tenders to be delivered at the Office of the Architect, Bank House, Clifton, not later than NOON on MONDAY, the 5th of OCTOBER. No pledge is given for the acceptance of the lowest or any other Tender.
Clifton, September 19, 1863.

TO CONTRACTORS and OTHERS.—SEWERAGE WORKS.—The Local Board for the District of Ealing are prepared to receive TENDERS for the CONSTRUCTION of about 3,200 lineal yards of BRICK, and about 3,000 lineal yards of STONEWARE PIPE SEWER, and other works connected therewith, according to plans, specification, bill of quantities, and form of Tender, which may be inspected at the Office of the Surveyor of the Board, Mr. CHARLES JONES, No. 2, Church terrace, Ealing, on and after MONDAY, the 28th instant, between the hours of TEN a.m. and FOUR p.m. Sealed Tenders to be sent to the undersigned Clerk of the Board, at his Office, No. 5, Court-yard, Albany, Piccadilly, London, on or before the 14th OCTOBER next, endorsed "Tender for Sewerage Works." The Local Board do not bind themselves to accept the Lowest or any Tender.—By order, (Signed)
24th September, 1863. ALEX HUNTLEY, Clerk

TO BUILDERS. — The Directors of the Ascot Hotel and Stables Company are prepared to receive TENDERS for some ADDITIONS to their Hotel and Stables. Plans and specifications of the Works may be seen at the Hotel, Ascot Heath. Tenders to be delivered on or before the 1st day of OCTOBER next, to Messrs CLARK & HOLLAND, Architects, Newmarket. The lowest or any Tender will not necessarily be accepted.

EXTENSION OF TIME FOR TENDERS.
METROPOLIS MANAGEMENT ACTS.
To BUILDERS, CONTRACTORS, and OTHERS.—The Board of Works for the Plumstead District are prepared to receive TENDERS for ERECTING a new BOARD-ROOM BUILDING and OFFICES, upon a plot of ground situate on the southern side of the High-street, in the parish and village of Charlton, Kent, S.E. The drawings, specification, and draft contract for the works, may be inspected, and bills of quantities and forms of Tender obtained, upon application at the Office of the Board, at Old Charlton, S.E. between the hours of TEN a.m. and FIVE p.m. on and after MONDAY, the 21st SEPTEMBER instant. The Tenders are to be addressed to the Clerk to the Board under a sealed envelope, endorsed, "Tender for Plumstead District Board Offices," and to be delivered at the above-mentioned Office in Charlton not later than FIVE o'clock in the afternoon of WEDNESDAY, the 30th day of SEPTEMBER instant. The Board do not pledge themselves to accept the lowest or any Tender, and the party whose Tender may be accepted will be required to provide two sureties satisfactory to the Board, which sureties, together with the contractor, must enter into a joint and several bond to the Board in the sum of 500l. for the due performance of the contract.—By order,
CHARLES AUGUSTIN SMITH, Clerk to the said Board.
Old Charlton, S.E. September, 1863.

TENDERS are invited for 346 Tons, more or less, of CAST IRON PIPES, for the Justices of the Peace for Cheshire. Particulars and specifications may be obtained from Messrs. W. THACKER & CO. 87, Newgate street, E.C.

TO STEEPLE-BUILDERS, &c.—The Spire of St. Mary's Church, Monmouth, which is about 200 feet high from the ground line, being in a dilapidated state and out of perpendicular to the extent of about 2ft. 6in. from the summit, the Churchwardens are ready to receive TENDERS for the REPAIR thereof. They do not bind themselves to any, the lowest or any Tender. Specifications and all information to be obtained of the Churchwardens. Tenders, addressed to the Churchwardens of Monmouth, to be delivered on or before the 30th instant.
Monmouth, September 16th, 1863.

TO BUILDERS.—"HOOVE LEA," BRIGHTON.—The drawings and specification of proposed ADDITIONS and ALTERATIONS may be seen between the hours of TEN and FIVE, at the Office of Mr. WOODMAN, Architect, No. 17, Prince Albert street, Brighton, to whom TENDERS are to be delivered not later than THREE o'clock, p.m. on WEDNESDAY, the 7th proximo. No pledge given to accept the lowest or any Tender.
September 23rd.

TO BUILDERS.—TENDERS are required for a HOUSE and SHOP to be ERECTED at Eltham, Kent, for Mr. Cooke. Plans and specification may be seen at my Offices, between TEN and FOUR o'clock, on and after MONDAY next, the 28th instant. Tenders to be delivered at my Office, endorsed "Tender for House at Eltham," on or before ELEVEN o'clock of MONDAY, the 12th OCTOBER. Mr. Cooke does not bind himself to accept the lowest or any Tender. JOHN WHICHCORD, Architect.
16, Walbrook, E.C. Sept. 21, 1863.

NORTHLEACH GASLIGHT and COKE COMPANY, LIMITED.—TENDERS for the whole or any part of the GASWORKS required by the above-named Company will be received up to the 3rd proximo. Copies of the plan and specification, and estimate of quantities, may be had on the usual terms, on application to the Surveyor, Mr. THOMAS REDMAN, Coldaston, near Northleach, Gloucestershire; or may be seen at the Company's Office, Market place, Northleach.—The Works are required to be completed as early as possible.
JAMES H. H. HOWARD, Secretary.
Northleach, Gloucestershire, September 22, '63. 3

[For remainder of Contracts see next Page.

CONTRACTS.

BRECON LOCAL BOARD of HEALTH.—TO SEWER CONTRACTORS.—The Board are prepared to receive TENDERS for the CONSTRUCTION of about ONE MILE of BRICK and PIPE SEWERS, to be entered for in three sections. Plans and specifications may be seen, and other information obtained on application to Mr. KIRK, Surveyor to the Board, Watton, Brecon. Sealed Tenders to be sent to me, not later than NOON, on MONDAY, the 5th OCTOBER next. The Board do not bind themselves to accept the lowest or any Tender.

S. B. EVANS, Clerk to the Board.

Brecon, 16th September, 1863.

TO BUILDERS.—The PHILHARMONIC ROOMS, SOUTHAMPTON.—The Directors of the Southampton Philharmonic Rooms Company (Limited) are prepared to receive TENDERS for the ERECTION of the above ROOMS, in the Above Bar street, Southampton. The drawings, specification, and conditions of contract may be inspected at the Offices of Messrs. HOVENDEN & HEATH, 4, Broad-street buildings, London, and at our Offices, 24, Portland street, Southampton.

Sealed Tenders to be delivered at our Offices, as above, not later than NOON, on WEDNESDAY, 7th OCTOBER.

The quantities can be obtained on application to Messrs HOVENDEN & HEATH, as above

The Directors will not necessarily accept the lowest or any Tender, and the party whose Tender may be accepted must, if required, provide security for the due performance of the contract

HINVES & BEDBOROUGH, Architects.

N.B.—Every Description of the Building Goods of the Trade always in Stock.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter FROM SIR RAYMOND JARVIS, Bart VENNOR, Isle of Wight.—Second Testimonial.—"March 10th, 1852.—In reply to your letter received this morning respecting the Gutta Percha Tubing for Pump Service, I can state with much satisfaction, it answers perfectly. Many builders and other persons have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B. From this testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

AUSTIN'S IMPERIAL PATENT SASH

and BLIND LINES.

TO BUILDERS, CARPENTERS, and BLIND MAKERS.

J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his

IMPERIAL PATENT FLAX SASH-LINES,

of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.

They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

PATENT HEATING and VENTILATING APPARATUSES, for Public Buildings and Private Houses.

SAVES IN FUEL 50 PER CENT.!

A prospectus, containing a full description of its action, and numerous advantages, will be given on application to the Patentee,

G. LEWAL, 5 and 6, PHILPOT LANE, LONDON, E.C.

Agents Wanted.

STEAM-ENGINES, DECK WINCHES, CONTRACTORS' LOCOMOTIVES, &c.—ALEXANDER SHANKS & SON, ENGINEERS, manufacturers of portable and fixed steam-engines; upright stationary engines (requiring no expense for brick-work or masonry); steam deck winches; portable steam-cranes; and hoisting engines (the latter adapted for loading and discharging ships, &c. and may be placed either on deck or on the quay); contractors' locomotives; water-wheels; turbines; sugar, flour, oil, and bone mills; machinery for pumping, winding, sawing, &c. The most improved machinery and the best materials are used in the manufacture of these engines, mills, &c., and all are carefully tested before leaving the works. Price lists on application.

ALEXANDER SHANKS & SON,

DENS IRON WORKS, ARBROATH, N.B.;

and 27, LEADENHALL STREET, LONDON, E.C.

CAUTION to ARCHITECTS and BUILDERS—In consequence of complaints arising from the substitution of INFERIOR and SPURIOUS ARTICLES instead of SMITH'S PATENT DOUBLE-ACTION DOOR SPRINGS; SMITH'S PATENT WEATHER TIGHT WATER BAR; and SMITH'S PATENT WEATHER-TIGHT CASEMENT FASTENING for FRENCH WINDOWS:

The above are most respectfully requested to observe that all GENUINE ARTICLES are stamped with the NAME and ADDRESS, SMITH, Patentee, 69, Princes-street, Leicester-square, London; and SUCH ONLY are WARRANTED.

NOW OPEN, YOUNG'S IRONMONGERY WAREHOUSE,

No. 24, Davies-street, Three Doors from Oxford-street.

For the supply of Builders, Carpenters, Upholsterers, Smiths, Bellhangers, and the Trade in general, at wholesale prices. In connection with his Old Establishment, No. 18, Blandford-street, Manchester-square, running out of Baker-street, Portman-square, London, W.

HART & SON

Ornamental Metal Workers in Iron, Silver, and Brass.

Chylices, patens, crosses, flower vases, lecterns, candlesticks, coronæ, standards, and brackets for lighting; gates, hinges, memorial brasses, &c., &c.

Catalogues on application.

53 to 58, Wych Street, Strand, London, W.C.; Show Rooms also, 20, Cockspur Street, S.W.

SMITH & WOODS'

SHOP FRONTS

WORKS, HARTS-HILL IRON FOUNDRY, Near Dudley. MAKERS of all DESCRIPTIONS of LIGHT or HEAVY CASTINGS.

LONDON OFFICE, 76, CANNON-STREET WEST, LONDON, E.C. Where PRICE LISTS And ESTIMATES MAY BE HAD on APPLICATION.

JOHNSTON, BROTHERS,

MEDIÆVAL METAL WORKERS AND GASFITTERS,

Manufactory, 190, High Holborn, London.

Drawings and Estimates furnished.

RICKET'S & HAMMOND'S

VENTILATING GLOBE LIGHT,

combining an agreeable method of lighting, with convenient t simple, and efficient ventilation.

The advantages obtained are these.—

A TOTAL REMOVAL OF ALL PRODUCTS OF COMBUSTION.

A COMPLETE DISPLACEMENT OF HEATED AND VITIATED AIR.

AND A CONSIDERABLE ECONOMY IN THE CONSUMPTION OF GAS.

A GLOBE LIGHT will consume 5 to 7 feet of gas per hour, giving as much light as an ordinary three-light chandelier, with a consumption of 12 feet per hour.

5, AGAR STREET STRAND, LONDON, W.C.

PERIN'S PATENT BAND SAWS.—S. WORSSAM & CO. beg to announce that they have purchased of M. PERIN, of Paris, the exclusive right to sell his celebrated Band Saws in the United Kingdom, and that they keep a large assortment at their works, 304, King's-road, Chelsea, S.W.

SNOXELL & CO.'S
PATENT REVOLVING SHUTTERS IN IRON OR WOOD.
BRASS SASH BARS, STALL BOARD PLATES, AND BLIND MAKERS.
96, REGENT STREET, W.; MANUFACTORY, 35, OLD STREET, E.C.

IMPROVED REVOLVING SHUTTERS.
FRANCIS & CO.
Having made great Improvements in the manufacture of Wood or Iron Revolving Shutters, are enabled to supply the public at the following reduced prices:—
Wood Revolving Shutters, with all requisite Gearing complete, from 2s. per foot. Iron Revolving Shutters, with all requisite Gearing, complete from 3s. per foot, suitable for Banking Houses, Public Buildings, Offices, Shop Fronts, and Private Houses.
Brass Drawn Sash Bars and Brass Stall Plates at a great Reduction in Price.
ILLUSTRATED PROSPECTUSES and TESTIMONIALS FREE BY POST on application at 174, GRAY'S INN ROAD, HOLBORN, LONDON.

REDUCTION IN PRICE
OF
CLARK'S
NEW PATENT REVOLVING SHUTTERS,
FOR
SHOP FRONTS AND PRIVATE HOUSES.
THE MOST SIMPLE, LIGHT, SECURE, AND CHEAP SHUTTER EXTANT.

Wood Revolving Shutters	2s. per foot super.	
Wood Self-Coiling	do.	2s. 6d. do.

BRASS SASH-BARS, STALL-BOARD PLATES, &c. &c.
15, Gate-street, Lincoln's Inn Fields, W.C.
AND 4, MARKET STREET, MANCHESTER.

BARTLETT, BROTHERS, & CO.
DEVONSHIRE WHARF, CAMDEN TOWN, N.W.
PATENT INDURATING SOLUTIONS,
For the Preservation of Stone, Cement, &c.;
ATENT SILICEOUS PAINT, FOR COATING BRICKS, CEMENT, &c.
FIRE-PROOF VARNISH,
Internal Wood Work, Roofs, and Church Work generally This Varnish renders Wood Uninflammable, and Preserves it from Decay.

HE FLUO-SILICIC STONE-PRESERVING COMPANY, LIMITED.
9, CHARING CROSS, S.W. & 12, COPTHALL COURT, THROGMORTON STREET, E.C.
ATENT FLUO-SILICIC INDURATIONS for the PRESERVATION of STONE, CEMENT, and other like materials. The Company apply to the surface of Stone, Cement, &c. a solution of Fluo-Silicic Acid, and ate of Potash These are the only patents which embrace the use of that most valuable agent, Fluo Silicic Acid. Bath, Caen, and r soft stones, when treated by the Company's solution, become extremely hard. The great expense of high ornament to buildings in hard s has been an obstruction to Art; but since the Fluo-Silicic process can be applied so readily to soft stone after it is carved, that obstruc- exists no longer. The Fluo-Silicic at once permanently arrests the decay of all stone.—For further information, apply to the Manager s Company, Mr. DUDLEY, Architect, as above.

PENCILS, BLACK LEAD, and COLOURED CHALKS.
A. W. FABER'S POLYGRADE LEAD PENCILS, sold by all Stationers and Artists' Colourmen.
Sole Agents HEINTZMANN & ROCHUSSEN, 9, Friday-street, E.C.

VENTILATION—PURE AIR.
Sherlingham's Day and Night Ventilator for the admission of Pure Air.

THROUGH THE EXTERNAL WALL
These Ventilators are arranged so that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required. HAYWARD, BROTHERS, & de Manufacturers, 187 and 189 (late 117 and 118), Union street, Borough, London

VIEILLE MONTAGNE ZINC.

THE ITALIAN-FORMED ZINC is much approved of by Architects and Engineers on account of its strength, durability, and appearance. O account of the light framing required, roofs, including framework and fixing, can be covered with it FOR £3 PER SQUARE up to 25 feet spar Sheds of larger span, including posts, 4l. per square. Architects are cautioned against allowing anything thinner than No. 13 gauge (20 oz.) to b used. ALL PLATES SHOULD BE REJECTED NOT BEARING, in addition to the Company's name, the words "ROOFING ZINC," and th gauge.

OLD ZINC RETAKEN AT HALF THE MARKET PRICE OF NEW.

For Designs and Estimates for Roofs, with Timber or Iron Framework, IRON CHURCHES COVERED WITH ZINC, and Buildings for the Colonies, apply to

THE COMPANY'S SURVEYOR,
12, MANCHESTER BUILDINGS, WESTMINSTER, S.W.

JAMES W. TYLER, CONTRACTOR FOR DEVAUX'S VIEILLE MONTAGNE THICK ZINC ROOFING,

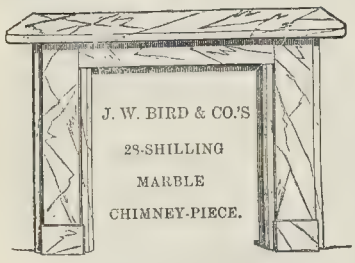
ON IMPROVED PRINCIPLES.

12, ABINGDON STREET, and 4, WOOD STREET, WESTMINSTER, close to Victoria Tower.

Estimates furnished for every description of Zinc Roofing and Guttering, inclusive or exclusive of Timber or Iron Framing, in all parts of England.
Having for several years been actively employed in laying DEVAUX'S THICK ROOFING ZINC (the purest extant) upon the new principles introduced by Mr. Edmeston, Mr. TYLER can re with confidence to work done as his best recommendation.
Good Zinc badly laid will still be a failure, for there is much more importance in the mode of laying than is yet generally known; and parties who will intrust their work to Mr. TYLER will f that this important point is thoroughly attended to, and at no extra cost.
This Zinc thus laid is quite as lasting as lead, if the woodwork is arranged according to Mr. TYLER'S directions.

BATH STONE OF BEST QUALITY

RANDELL & SAUNDERS, Quarrymen and Stone Merchants, Bath.



List of Prices at the Quarries and Depôts, also Cost for Transit to any part of the United Kingdom, furnished on application to BATH STONE OFFICE, CORSHAM, WILTS.

Truss Marble Chimney Pieces .....from 50s. to 70s.
Truss Stone ditto ..... 12s. to 18s.

Sheet of Designs sent free on application. Estimates for every description of Masonry.

Now ready, in roan tuck, gilt edges, price 6s. (postage 4d.),

THE ENGINEER'S, ARCHITECT'S, and CONTRACTOR'S POCKET BOOK (LOCKWOOD & CO.'S, formerly WEALE'S) for the Year 1863. With Woodcuts and Eight Steel Plates.

"The present publishers deserve great credit for the improvements which have been introduced into 'The Engineer's Pocket-Book' since it came into their hands. The present edition contains several additions and improvements, and a few well-selected scientific and practical papers, and some brief memoirs of the scientific and other men of note recently deceased. The tables for the reciprocal conversion of British measures of length, superficies, capacity, &c. into metric measures, and six tables for the translation of measures of weight which have been much wanted, will be found a valuable addition amongst many others introduced in 'The Engineer's Pocket-Book' for this year."—*Artizan.*

"Another edition of this old acquaintance has just been issued, and fully merits the estimation in which it has been held for many years. There is much new matter introduced, and the work has been carefully corrected up to the day of publication. It is one of the most valuable books of its class. We strongly recommend it."—*Civil Engineer and Architect's Journal.*

"Contains an immense variety of useful matter."—*Builder.*

London: LOCKWOOD & CO. 7, Stationers' Hall-court, E.C.

PRACTICAL MECHANICS' JOURNAL for OCTOBER. Part 157. Price 1s. Illustrated with a large and highly finished steel Engraving of Mr Joseph Taylor's Mill for Rolling Gun Barrels, and thirty woodcuts.

Original Articles on The Northern Collieries.
Ice Making Machines.
Gun Cotton.
Proportions of Ships.
Taylor's Machinery for Rolling Gun Barrels.
London Statues.
Supply of Water to Cities.
Lighting Coal Pits.

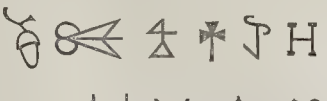
The Builder.



VOL. XXI.—No. 1077.

Going Along.
Strasburg: Carlsruhe: Munich.

ERWIN VON STEINBACH has all the credit popularly of Strasburg Cathedral, the loftiest building in the world, and deserves a great deal of that credit. Several other men, however, co-operated in producing the present pile, which, notwithstanding certain discrepancies in the proportions of the various parts, produces astonishment and admiration in all who look upon it with the mind. In the year 1028, a cathedral here, on the site probably of a still older building, was roofed in. It experienced vicissitudes, and in 1140 a tower belonging to it was destroyed by fire. Erwin von Steinbach comes on the scene in the latter half of the thirteenth century, when great part of the then existing building was taken down; and in 1275, under the direction of Bishop Conrad, he had nearly finished a new nave. Attention was then directed to the western façade and the towers, and "*A.D.* 1277 *in die beati Urbani* [25th of May] *hoc gloriosum opus inchoavit magister Erwinus de Steinbach.*" Erwin died in 1318, and left a family of artists, one of whom, John, succeeded him at the cathedral, and died in 1339. By 1365, the two towers at the west end were finished. Fire destroyed the interior of all but the choir in 1384. In 1429, John Hültz, of Cologne, was called in, and in 1439 he completed the spire on the north tower, laying the last stone exactly 162 years after Conrad had placed the first stone of the tower. That Erwin designed the spire is not likely: certain ancient drawings exist, and are pointed to as Erwin's, but the authorship is doubtful. During the Revolution of 1793, one Teteral, a Jacobin, proposed to demolish the spire because its height, exceeding that of ordinary houses, insulted the principle of equality! Fortunately his fellows were wiser.

There is no view in the interior so fine as that of the east end, where the semi-circular arch prevails, and which belongs to a period earlier than that of Steinbach. Some of the stained glass, ranging in date from the fourteenth century, is very beautiful. The sculptured figures which surround the upper part of a column in the south transept, and are ascribed to Erwin's daughter Sabina, are more striking as a whole, than beautiful singly. The well-known curious astronomical clock close by, which puts all kinds of figures in motion at stated times, and notes all sorts of periodic events, a modern work improved from an ancient model, still gathers its crowd of country folks and foreigners at twelve o'clock in the day, when the cock crows, Death strikes his dart, and the twelve Apostles pass before the figure of Christ. It was finished in 1842. Its external aspect is sufficiently ugly. Using this word, we have before us a miserable cabin, built for the custodian on the top of the unfinished southern tower of the cathedral. This is a great eye-sore from below and around, and should be made to take a different shape.

The stonework of the cathedral is in a very good state. Masons' marks abound both within and without. To give but a few, here are some from the lower part of the great western front:—

These two are from the interior of the chapel of St. John, built prior to Erwin's work:—

The annexed mark is on the outside of the parapet, round the platform at the top of the west front and foot of the spire-tower; and this, a rude outline of a leg, is in the first gallery of the spire-tower.

The latter is particularly noticeable, as a leg thus used (with other marks) has been recently found on a pinnacle of the Church of St. Nicholas, Norwich, lately taken down as unsafe.

It is not a proper occasion to carry on this subject; but it is worth noting that the masons at Strasburg Cathedral still form a "lodge," the origin of which is said to go back to the time of Erwin de Steinbach. At any rate, writes a local historian, it is certain, that in very early times the masons of this cathedral formed themselves into a body, not receiving others into it excepting under conditions, and that they had signs for recognition amongst themselves. This lodge became the mother of others in Germany. Dotzinger, the successor of John Hültz as architect of the cathedral, united them in one corporation. An assembly of the heads of the different lodges, held in 1459, at Ratisbon, arranged laws, and adopted as grand master the architect of Strasburg Cathedral. Maximilian I., it is stated, confirmed the incorporation on the 3rd of October, 1498. At the commencement of the eighteenth century, however, the principal lodge (*Hauptlhütte*) was transferred from Strasburg to Mayence.

In an old building near the Minster, called the *Frauenhaus*, where lives M. Klotz, the present architect to the cathedral lay authorities, and which building, as many of our readers will remember, is used as a sort of museum, there is a very elegant Gothic winding staircase from the top of the house to the bottom, all the stones of which bear marks similar in general character to the mark given as from the parapet of the platform at foot of the spire-tower. Here is one of them to show the similarity. In the *Frauenhaus* we were shown part of Erwin's tomb, formerly in the cathedral, where he was buried. Why it should be here and not there still, affectionately preserved, we are not able to say.

The monument to Marshal Saxe, the second lion of the town, and in St. Thomas's Church, now used by Protestants, is more noticeable for the manipulative skill shown in it than its design. France, a female figure, not without beauty, endeavours to keep him from the grave and to put back Death,—the best figure of the group. The mixture of allegory and reality seldom gives lasting pleasure, and this monument is not amongst the exceptions. Its chief attribute, too, is flurry rather than repose.

The church contains several curious tablets and inscriptions, mostly of the thirteenth and fourteenth centuries: and the capitals of the main columns of the church, thirteenth century, are good. Amongst the memorials is a sculptured skeleton (the head as of life, and very fine), lying on a mat, the whole cut from one block.

On the road to St. Thomas's, the visitor passes the modern monument to Gutenberg (who made his earliest attempt at printing in Strasburg), with its clever inscription, equivalent to this,—"And there was light."

Proceeding to *Carlsruhe*, at Kehl we get into Germany: and at Appenweier station the mountains of the black forest are finely in view. Fan-shaped Carlsruhe, with its remarkable avenue of lofty poplars, has been greatly improved within the last dozen years. Many large houses are being built in the suburbs, all displaying colour externally, and many of them ornament in terra-cotta and tile-work. The theatre, built by the architect, Hübsch, who has done much for the town, is mainly of terra-cotta externally, including figures in the tympanum of the pediment, and has painted decorations under the portico, the whole very agreeable and suggestive of the purpose of the building. The Polytechnic School, built by the same architect some years ago, is being enlarged. The stones of the semi-circular arches of the windows and up the sides of the openings are incised with a simple ornament, which produces a good effect.

On a bright day the main streets of Carlsruhe are pleasant to look at; the balconies, with which the houses are mostly provided, being filled with brilliant flowers, shaded with gay awnings. Here and elsewhere it will be observed that in modern houses at the corner of a street, the opportunity of forming a bay-window at the angle to look both ways, corbelled out over the ground-story, and running up the whole height of the house (as in more ancient buildings in Nuremberg and other old cities), is seldom neglected, and serves to give variety and movement to the façade. This arrangement, spite of legislative enactments somewhat opposed to it, might be usefully adopted amongst us more often than it is.

The road to *Munich* has much to interest. At Esslingen is seen the open-work spire of the Liebfrauenkirche, designed in the fifteenth century by Hans Böblinger, who lies buried within. The covered ascent to the old castle here is also striking. Throughout the journey, small hamlets, of half-timbered houses around a church, pleasant quiet spots, succeed each other. Towards Geislingen station, at the foot of the Rauhe Alp, the valley of the Neckar and that of the Fils afford views of lovely character. The two valleys cross; the mountains, studded with a ruin or two, are covered with foliage,—there is a brilliant blue sky above: and the harvest people below, the waggons drawn by cows, give additional animation to the scene. At Ulm, where the minster is glorious, large barracks and other new buildings are in progress. Augsburg, birthplace of Holbein the elder, and site of several fine Mediæval structures, follows; and then pass villages and churches, the latter more remarkable for their number than their architecture.

As at Strasburg, it was night when we arrived in Munich:—

> "Silently, one by one, in the infinite meadows of Heaven,
> Blossom'd the lovely stars, the forget-me-nots of the angels."

A great fair was in full swing, and everywhere on our road to the *Baierischer Hof* in Promenaden Platz, where flags were flying from the windows, the city looked bright and gay. In this Platz, by the way, several bronze statues, including one of Glück, the composer, are stowed away, with very little advantage from their position. Munich is a sort of pattern-book, as every one now understands. Thus, the Basilica of St. Bonifacius is mainly a copy of a well-known church in Rome; the "new palace" is taken from the Pitti Palace in Florence; the Hall of the Marshals from the Loggia de' Lanzi, in the same city; the *Siegesthor* follows the arch of Constantine; and so on. Little blame, however, attaches to Ludwig I., the late though living king to whom, as all know, the city owes its present fame. He had some clever architects, but he did not happen

to get hold of a genius. Had he done so, the money and care expended might have advanced art generally: as it is, what was done merely advanced his city. With his painters he was more fortunate than with his architects, and the influence of those he developed has been felt much more widely. Indeed, what King Lewis effected as a whole is truly marvellous considered with reference to his resources. An equestrian statue of the ex-king has been lately raised in his honour in Ludwig's Strasse. On each side of the main figure is a page on foot, holding a tablet inscribed respectively Magnanimous and Just. At the angles of the pedestal on which these stand are four other figures symbolising Art, Science, Religion, and Music. All the figures are of a bright-coloured bronze; the pedestal is of a reddish stone. We give a view, which, though made from hastily obtained and therefore slight materials, serves to convey a fair idea of the aspect and merits of the monument.*

Building has been going on to an immense extent in the suburbs. Many hundreds of houses have been erected, some of them with elegant exteriors. The statement on the spot is that they have overbuilt, and that rents are low in the suburbs in consequence. New Law Courts are being erected, forming a large building in the modern Gothic style of Germany, which is flat and spiritless. The building in question, however, has claims for praise. Its architect shows himself more than a mere copyist. The exterior is of terra-cotta. The brickwork is first carried up with indented courses at regular intervals, by means of which the terra-cotta facings and decorations are secured. The apartments within are being adorned with colour and gilding. The architect is Herr Bürkeim. A new building, also, of size and pretension is being erected for the collections known as the Old German Museum: in style it seemed a curious mixture of Gothic and Italian.

The collections, of recent formation, and at present poorly accommodated, are large, and include many valuable and interesting objects, but being classed chronologically, the real value of the best things is overlooked through their being mixed up with heterogeneous and inferior matters. There is no catalogue; none of the specimens are ticketed, and the attendants speak only German, so that the majority of foreigners examine it with difficulty. We have pleasure, however, in saying that the director, Baron Aredin, being told by one of the persons in charge that there were visitors who appeared to take special interest in the Museum, came unasked and accompanied us as entire strangers through the remainder of the collection. As we understood, the Museum is not open ordinarily to the inhabitants of the city; only to artists and foreigners. The number of objects was guessed at 5,000: pictures and casts are made to aid in the completion of certain classes. Illuminations by Hemling, sketches by Albert Durer, fifteenth-century triptychs, carvings in mother-of-pearl, Palissy goblets, seals, watches, bronze tablets after Peter Fischer, sculpture, furniture, and metal-work, are a few of the remembrances of the collection that come back to us.

We must say a few words of some of the older structures and collections, well known though they are. The Royal Library, a building by Gaertner, finished in 1843, has a very grand staircase, including two wide flights up of twenty-seven steps each. The Bavarian granite, by the way, used greatly for steps and shafts of columns, has a soapy or cementitious aspect not agreeable. The library is of great extent, and contains no fewer than 800,000 volumes! These are arranged in twelve general classes and 180 sub-classes. The earliest printed book here is a Bible of 1450-55. The miscellaneous contents are curious, including MSS. of the sixth and seventh centuries; an amazingly small copy of the Koran—a wonderful piece of minute writing; a ninth-century Codex, jewelled; Boccacio's "Noble Men and Women," 1458, illuminated, with an array of heads admirably executed; some other fifteenth-century illuminations of great beauty; Albert Durer's Prayer-book, and specimens of early bindings. The number of students in the library seemed very small.

The church of St. Lewis, close by, contains, it will be remembered, Cornelius's large picture, "The Last Judgment," which, notwithstanding many high qualities, gives real pleasure to very few. The composition is confused, and wanting in concentration; the general tone of colour is brick-dusty. Some of the figures in the vaulting of the transepts and at the *crux*, painted from the cartoons of Cornelius, are very fine, spite of the white woolly clouds. There is an immense amount of decoration of all kinds, but the interior of this church is nevertheless very ugly.

The interior of the church dedicated "In honour of All Saints, 1837," is one of the most satisfactory things in Munich. Klenze was the architect, and Hess and his pupils have covered it with frescoes on gold ground. Scagliola faces the walls, and the columns are of marble: yet the whole is richly grave and harmonious. The effect of the gold ground here and elsewhere is most satisfactory, lighting up the groups and setting them in air. Some of the single figures, for example, in the spandrels at the west end, seem to stand in a brilliant sky, infinitely distant. We have nothing of its kind to show against this interior in London;—the more's the shame.

The interior of the Basilica of St. Boniface is also admirable. There Hess co-operated with Ziebland, the architect. It includes an enormous amount of fresco painting and scagliola, and a forest of monolithic marble columns forming two aisles on each side of the nave. The capitals, of white marble, exhibit much variety of design. The tie-beam roof and the west end of the church (where stands the organ in four pieces between the windows), are the least satisfactory portions of the interior. The amount of art shown in the exterior is but small. All the paintings, we may note, being withinside, appear to stand very well. Used externally, however, fresco is not more durable in Munich than it would be with us. Thus the painting on the Isar Thor, dating from 1833, is in a very bad condition.

In the Cathedral a new carved oak pulpit, by Sickinger, has been set up quite recently. It is very lofty and elaborate, full of figures, and a beautiful piece of carving. The bronze figures (size of life) at the sides and angles of the tomb here, of King Lewis, the Bavarian, 1622, are fine, and support the reputation of their maker, Peter de Witte, who was called Candido.

The bust of this artist will be found with that of others in the Bavarian Hall of Fame; the Doric *Stoa* erected by Klenze at the back of the large figure of Bavaria. The wall under the portico, and open to the air, is coloured red: the busts are supported on brackets against it. Amongst the men thus honoured are Holbein the elder; P. Fischer; Wolfgang Miller; Neumann, baumeister; Graf von Rumford; Alois Senefelder, the inventor of lithography; Ohlmüller, baumeister; Schwanthaler; Schelling, weltweiser; and others. Every one knows of the large bronze figure, with its sofa for three persons in each cheek, the work of Schwanthaler. Schwanthaler's studio is preserved for the public, and kept open for inspection. The works, as there exhibited, did not extort from us the amount of admiration we had calculated on giving. His quaint little cellar-like *sanctum*, or "club-room," where with an occasional friend he spent many of his leisure hours, with the knicknacks that fill the shelves and line the walls,—a carved root of a lemon-tree, odd goblets, morsels of armour, and so forth,—is not the least interesting part of the house. "Here," said one, who remembered the time, "the late king often came, and enjoyed without restraint that society which he loves best, the society of artists." "He used to catch all artists," said another, "and make them work; but he paid them well." The ex-king had true artist-like feeling. He showed it in many ways; once, when he took from his own private collection a noble head of Christ, by Albert Durer, and gave it to the town of Nuremberg, saying "Durer was your glory,—you have a right to his masterpiece." Durer's fellow citizens did not honour him as he deserved while he lived: he had to visit Venice to be properly appreciated; but they called him upon his tombstone, with but little exaggeration, "*Pictor, Chalcographer, Sculptor, sine exemplo.*" He was, indeed, a wonderful fellow; great in all these arts,—painting, engraving, and sculpture,—and not in these alone. We shall see some of his best works presently in the Pinacothek. It was to him that Raffaelle, when sending him a drawing, wrote,—"Your name has long been the object of my veneration;" and again,—"In this drawing I do not know whether I have attained to the proper height,—I am almost afraid not; but accept it, and never cease to love me as I love and honour you." On the back of a drawing by Raffaelle now in Vienna, Albert has himself written the German words that amount to this:—"1515, Raffaelle, of Urbino, who has been so well esteemed by the Pope, drew these naked figures, and sent them to Albert Durer, in Nuremberg, to show him his hand." This, however, would seem to be a second drawing, not the one that accompanied Raffaelle's letter that we have quoted. The record of such kindly interchanges warms and delights one. Art without heart goes but a little way.

OBITUARY.

The late President of the Society of Arts.—At his house in Russell-square, on Sunday last, died Mr. William Tooke, F.R.S., and who was last year elected president of the Society of Arts, whereof he had long been an active and distinguished member. Mr. Tooke was born in St. Petersburgh in 1777, and was consequently in his 86th year. Law was his profession, and literature and the society of literary men his pleasure and delight. He represented Truro in Parliament from 1835 to 1837, and took an active part in the establishment of the Society for the Diffusion of Useful Knowledge, of which he was the treasurer. We have seen a letter to him from Lord Brougham, when the idea of the Society was first broached, commencing somewhat thus:—"When anything good is to be done I look to you to help in it." Good was to be done in the direction indicated, and he did help in it for many years. In society Mr. Tooke was always a welcome guest. He had an excellent memory; and his recollections of men and things for the last sixty years and more gave a value to his conversation to which many can testify. Mr. Tooke published an edition of "Churchill's Poetical Works," in 1804, which was re-published by him in 1844, with a life of the poet. More recently he published a work called "The Monarchy of France: its Rise, Progress, and Fall." We had the good fortune to know Mr. Tooke for many years, and we lament in his loss an esteemed friend as well as an able and good man.

The late Mr. William Herbert.—Three old friends to grieve for in one week.—Mr. Tooke, Mr. Cockerell (of whom we have spoken at greater length on another page), and now Mr. William Herbert, of Clapham-common, who died at Great Malvern, on the 18th instant, in the seventy-second year of his age. Mr. Herbert was known to many of our metropolitan readers in two classes,—artists, and those connected with building. The improvements in West Strand and King William-street were due to his enterprise and energy; and by the exercise of his business, there and elsewhere, he realized an ample fortune, which enabled him to cultivate a natural taste, and become a considerable buyer of pictures and sculpture. He was for many years an active and very useful member of the council of the Art-Union of London, and will be remembered for his kindness of heart by all who had the good fortune to enjoy his friendship.

THE LATE MR. CHARLES ROBERT COCKERELL, R.A., ARCHITECT.

HONOURED by every member of his profession at home, as by men of taste and learning abroad, and endeared as he was to every one who ever knew him, Mr. Cockerell is now added to the list of those who have been taken from the higher walks of the pursuit and practice of architecture; and his remains have been followed to a resting-place in St. Paul's Cathedral, by a crowd of sorrowing friends. Mr. Cockerell died on Thursday, the 17th instant, at his house, No. 13, Chester-terrace, Regent's-park, and his funeral has taken place on this Thursday. He was in the seventy-sixth year of his age. He had for the last three or four years, retired from professional avocations, and even from meetings of the Institute of British Architects, and other societies to which he had some time previously renewed an interest that had been at all times valued; and which became at last especially so, as a bond of union under circumstances that threatened to break up the chief representative body of the profession, if not to act prejudicially on the growth of art in architecture for some subsequent time.

When after the death of Earl de Grey, it became necessary to name his successor in the presidency of the Institute, an office which many of the members had been long contending ought to be filled by a professional architect, there was one name at least that all respected, and that united all parties. Mr. Cockerell was elected; but at the expiration of the session 1860-61 his health compelled him to finally relinquish the office. Although on Mr. Cockerell's refusal to be again nominated, a contest took place, the objects sought originally to be attained by his election, probably did not cease to be influenced by it, as they certainly were by the estimation in which he had been, and continued to be, held. This respect and regard were manifested in the placing of his portrait in the rooms of the Institute, and by the presentation during the present year, of an address beautifully illuminated by Mr. Owen Jones, and signed by all the members of the Institute. These latest marks of the esteem of his professional brethren, touched all the sensibility of his excellent nature, and may have given some solace to the final days of his life.

Charles Robert Cockerell was born in London, or one of its suburbs, on the 28th of April, 1788. He was the son of Mr. Samuel Pepys Cockerell, an architect and surveyor, whose name is well known to old members of the profession as surveyor to the East-India House and to several important London estates, and who appears to have been in extensive practice in the closing decade of the last century. We have, however, just now, few particulars of his works, beyond what are afforded by the names of some of them. He resided in Saville-row, or in the corner house of that street and Old Burlington-street; the address attached to his drawings,—as to those of Mr. C. R. Cockerell when they came to be shown in the exhibition of the Royal Academy in Somerset House,—being sometimes Saville-row, and sometimes No. 8, Old Burlington-street. Few as our particulars are of Samuel Pepys Cockerell, they may however be interesting, and be here appropriately given as helping to show the school in which the chief subject of this notice was nurtured in part.

In records of Exhibitions of the Academy, we first meet with the name of S. P. Cockerell, of Saville-row, in 1792, when Mr. C. R. Cockerell would be four years of age. In the exhibition of that year, the twenty-fourth of the Academy's existence, Mr. S. P. Cockerell displayed four works, namely, a "Design for a Town Residence," a "Design for Improving the Foundling Hospital," a "Design for a Church now building at Banbury, in Oxfordshire," and a "Design for a Marine Cottage, built in the Isle of Thanet." In 1793, he exhibited "The Church in Normanton Park, the Seat of Sir Gilbert Heathcote, Bart., as proposed to be decorated," and "Middleton Hall, in Caermarthenshire, building for W. Paxton, Esq.:" in 1795, "Principal Front of Gore Court, Sittingbourne, Kent;" in 1797, "East View of the Church of St. Martin, Outwich, now building;" and in 1798, an "Internal View" of the same church, and in 1799, a "Design for the Inside" of the church "as executed." In the exhibition of the last-named year, also appeared from his hand, a "Design of the East End of the Church of St. Margaret, Westminster." At this time George Dance was "Professor in Architecture;" and Paul Sandby, and James Wyatt, were Academicians; and Joseph Bonomi, and John Soane, Associates. J. and T. Malton, R. Brettingham, D. Alexander, W. Atkinson, J. Savage, A. Pugin, W. R. Laxton, W. Leverton, F. Nash, T. Chawner, Jeffry Wyatt, T. Hardwick, H. E. Kendall, C. H. Tatham, J. Shaw, G. Wyatt, S. Ware, jun., C. Beazley, J. Buckler, T. Taylor, J. W. Pocock, J. A. Repton, P. F. Robinson, and J. Britton, are amongst the names in the catalogue. Some of these were destined shortly to be replenished by names of contemporaries of Mr. C. R. Cockerell, to whose works the recent appearance of the architectural room, greatly more sparkling though it may have been chromatically, has made no approach in merit.

In the year 1801, Mr. S. P. Cockerell exhibited "A Frame with Four Drawings, viz., A Design for a [so in catalogue] Entrance to Buckland Abbey, Devonshire, formerly the seat of the celebrated English circumnavigator Admiral Sir Francis Drake, and now of his descendant Lord Heathfield, situated on an eminence, and intended to perpetuate the memory of Sir Francis Drake, and at the same time to serve as a sea-mark; The new Entrance to the Stables of the Light Horse Volunteers, in Worship-street; A Design made in the Year 1790, for a new Corps de Garde near St. James's: Design for the new Tower to be built to the Church of St. Ann's, Soho." He also exhibited "A Design for the inside of St. Margaret's, Westminster, as now executing, with new Ceiling, Galleries, and Organ." In 1802, he exhibited "Nutwell Court, near Exeter, the Seat of the Right Hon. Lord Heathfield;" and in 1803, "Sketch of a Design for a Church at Huntingdon, adapted to the old tower and the materials on the spot." The family name does not again occur in the catalogues till fifteen years later, when the son of Samuel Pepys Cockerell began to exhibit. We have now to pursue the life of this son, the distinguished architect just deceased.

Mr. C. R. Cockerell, it appears, was first sent to a private school near the City-road and Battle Bridge. Subsequently, that is 1802, he was sent to Westminster School, where he was the form-fellow of men afterwards eminent, who became his fast friends through life. Amongst these were the Earl of Tavistock, afterwards Duke of Bedford, and his brother, Lord John Russell; John Cam Hobhouse, now Lord Broughton; and Fitzroy Somerset, afterwards Lord Raglan. At Westminster, he acquired a foundation of that classical taste which was manifested in him throughout his career. For the school, he always retained affection; and in 1857, he testified this by the gift of wall-paintings which were executed in *tempera* by Mr. Fenton, representing Athens and Pompeii restored from his well-known designs. From Westminster, he entered his father's office, where he remained during between four and five years. His pursuits about the time when he would be attaining manhood, and after his majority, may be conjectured from the evidence of his father's avocations. But it is known, that somewhere about the year 1809, he went to Mr., afterwards Sir Robert, Smirke, as confidential assistant, at the time of the rebuilding of Covent Garden Theatre. Sir Robert always expressed himself indebted to Mr. Cockerell, for his aid in that arduous and extraordinarily rapid work of construction. Between his father's office and the theatre, thus, he was engaged till May, 1810, when he left England to commence a course of travels and of exploration in Greece, Asia Minor, and Sicily, which produced the most important results in our information concerning Grecian architecture and sculpture, procured some of the most valued treasures of the British Museum, and of the Glyptothek in Munich, and laid a foundation for that antiquarian and artistic knowledge and appreciation of sculpture in its relation with architecture, which was always afterwards one of his specialities.

In estimating the course which his labours took, we may here fittingly note what were the circumstances of architecture and its study at the time. Observation of examples themselves had more importance attached to it, than it has even now that the facilities of travel are so much increased. Such observation we ourselves must regard as an essential, whilst assessing at their highest value the most complete drawings or the accuracy of photography. To this requirement of observation as estimated, was added that of study of the examples through the aid of *actual* "*admeasurement*" of them. Foreign travel, further, was the complement of the education of a gentleman; and amongst the higher classes of society, the architect, unless a surveyor also, had to look for his patronage and employment. The church- and chapel-building age had barely commenced; indeed, up to the time of the Gothic churches of Barry, Vulliamy, Rickman, and others, and the works in a different manner of Soane, Repton, and the subject of this memoir, architecture in the class of buildings, might be said to be represented by the brick proprietary chapels, as those near Portman-square, and in May Fair and Percy-street, or the carpenter's Gothic of Tavistock Chapel; though we will not say that these examples were all precisely of the same date. The taste for the Grecian orders had set in; and the portico of Covent Garden Theatre, as we have seen, had been presented to public notice. The Manchester Exchange, by Harrison, now much altered, dates like the London Theatre, in 1809. Wilkins had published his "Antiquities of Magna Græcia" in 1807, and been employed in the building of Downing College, Cambridge; and the Russell Institution, built for an assembly-room, belongs to 1808. Aikin's "Essay on the Doric Order" appeared in 1810. Moreover, in 1810, Turkey and Greece were almost the only countries open to travellers.

Mr. Cockerell left for Constantinople. He was entrusted with despatches, by the late Wm. R. Hamilton, at the time Under Secretary of State for Foreign Affairs, and sailed on board a small lugger of war, incurring thereby some risk. He passed within sight of Cadiz during the bombardment; but got without stoppage of any kind, to his place of destination. At Constantinople he passed some months. In the same year, 1810, he was in Athens, where he spent the winter with Lord Byron, Hobhouse, Baron Stackelberg, Herr Linckh, of Wurtemburg; Baron Haller, of Hallerstein, architect to the King of Bavaria; the Chevalier Bronstedt, of Copenhagen, and Mr. Koes; and Foster, the architect, of Liverpool. Early in 1811, after spending an evening with Lord Byron, and pouring out libations in propitiation to the god Neptune, for his safe voyage to England, Messrs. Cockerell, Foster, and Linckh left the Piræus for Ægina. They bivouacked in an *adytum* under the Panhellenian Mount, the descendants of the Æacidæ, according to the account, looking on in amazement. Here the discovery was made of marbles of the greatest importance in the history of Greek sculpture. They are characterized by that peculiar rigidity and formality which was anciently called Æginetan. They consist of entire statues; and, with the figures from the Parthenon pediments, are, according to Mr. Scharf, "the only instances of an extensive range of Greek composition that we can refer to, as still existing." The discoveries excited great interest throughout Europe. The information gathered by Mr. Cockerell, however, did not all appear until so late as the publication of his volume, of 1860. The marbles were obtained and deposited in Zante. Ultimately they were purchased by the Bavarian Government, having been declined by this country; and casts only are to be seen in the British Museum. The Museum is, however, fortunate in possession of results of Mr. Cockerell's next researches.

From Zante, Mr. Cockerell went to Arcadia, in the Morea, where he investigated the remains of the temple at Bassæ, near Phigaleia, and ascertained the existence of the sculpture now known as the Phigaleian marbles. But the discovery could not at the time be turned to the account desired, the jealousy of the authorities causing excavations to be deferred. Mr. Cockerell then returned to Athens. In the latter part of 1811, and the commencement of 1812, he visited the coast of Ionia, Lycia, and Cilicia, and made a short tour through the Seven Churches. Then, cruising along the coast of Karamania, he fell in with Captain Beaufort, commanding a king's ship, and engaged in surveying that southern shore of Asia Minor. Captain Beaufort after-

wards published some account of his expedition. Mr. Cockerell was asked on board, and remained cruising with Captain Beaufort for some time. Having left the ship at Malta, he went on to Sicily, where he spent the rest of the year 1812. In Sicily, he obtained materials for his restoration of the Temple of the Giants at Girgenti, the ancient Agrigentum, since published in the supplementary volume to the second edition of Stuart's "Athens," and in investigating fortifications and other remains of Syracuse. At the latter place, his opinions are to this day, staple of the information given by local guides and *savans*. Meanwhile, or during his stay in Sicily, the marbles of Bassæ had been excavated by a party of artists and others. With the party was Mr. Donaldson, who published the first account of the temple in the supplementary volume to Stuart's "Athens." The excavation at the time, was necessary on account of the uncertainty of the relations with the authorities from whom permission to excavate had been obtained. Mr. Cockerell returned to Greece early in 1813, by way of Albania, and proceeded on a tour through the north of Peloponnesus, visiting Argos, Orchomenos, Sicyon, Corinth, and other places. After this, it is somewhat difficult to follow his wanderings accurately till the beginning of 1815. He had intended visiting Egypt with Mr. (afterwards Lord) North; but an accident to the ship, caused him to be detained at Candia so long that he was obliged to give up the journey. He likewise visited the islands of the Archipelago. Early in 1815, according to one account, he arrived in Naples, where he passed the summer, devoting much time to the ruins of Pompeii. We, however, infer, from the title of one of his drawings, that he must have commenced the Pompeian studies in the preceding year. He was in constant intercourse with Mazois, Caristie, Leclere, and other French artists. He passed the winter of 1815-16 at Rome, whither his reputation had preceded him; and he was received with much distinction. In the spring he went to Florence, and devoted much study to the group of Niobe, the arrangement and architectural purpose of which had long been a matter of dispute. His disposition of the group in a pediment, was generally approved. He etched a plate of the group, and had some impressions struck off for private circulation, accompanied with explanatory letter-press. After continuing his studies at Florence through great part of the summer, he went in the autumn to Lombardy, and to Parma and other places.

In the year 1817, he returned to England to commence professional labours. He would then be about 29 years of age. He had already established a high reputation at home, by his discoveries, and for his knowledge and judgment in matters of art. He commenced business on his own account, sharing, however, the office and staff of his father in Saville-row. During the first few years after his return, he was much occupied in the completion of labours commenced in his travels, some of the fruits of which soon appeared in the exhibitions of the Royal Academy.

The first mention that we find of his name in the Academy catalogues, is in the year 1818, when he exhibited a "Sketch of a Kiosk Siendrivan of Ali Pasha, made in Ganina, in Albania, in the year 1813; and Restoration of a House in Pompeia, from admeasurements and studies made in the remains of that city in the year 1814," and "Sketch of a decoration of the Temple of Jupiter Panhellenius at Ægina, from actual admeasurement and discoveries made in an excavation by the author and other travellers in 1811."

John Soane was at this time "Professor in Architecture."

In 1819 Mr. Cockerell was appointed surveyor to St. Paul's Cathedral; and somewhere about the same time, he was officially associated with his father in the surveyorship of the India House. In the year just mentioned, when his address is given as No. 8, Old Burlington-street, he exhibited his "Idea of a Restoration of the Capitol and Forum of Rome—from an elevated point between the Palatine Hill and the Temple of Antonine and Faustina, from the existing remains, the authorities of ancient writers, and the dissertations of Piranesi, Nardini, Venuti, and others." This work, and the companion restoration of Athens, are well known from the published engravings, and have been alluded to once before in this biographical sketch.

In 1820 he exhibited a "Restoration of the East Front and Pediment of the Parthenon, with the Scenery surrounding the Acropolis of Athens; showing the relative situations of the statues now deposited in the British Museum, and which formed a part of the group representing the contest of Minerva and Neptune for the patronage of Athens, and in the presence of the assembled gods. The metopes, the golden shields, and inscriptions, &c., &c., restored from drawings and observations made on the spot." In 1821 he exhibited, according to the title in the Academy catalogue (which we follow *verbatim* and *literatim*), "Perspective Elevation, with the Plans and Sections, of the Philosophical and Literary Institution now building in Park-street, Bristol. The scite forms an angle with Hanmer's-place, and is on a rapid declivity." The building appears to have been commenced in the previous year, and to have been completed in 1823. In 1821 he replaced the ball and cross of St. Paul's with a new one, which is larger than the old, and rather too large we have always thought. Doubtless a statement that the work was done under the direction of the Dean and Chapter is correct. In 1822, when his address is again "Saville-row," he exhibited a "Design for a Chapel." Probably this design was that for Hanover Chapel, Regent-street; for, the first stone of that building was laid on the 6th of June, 1823. The Chapel was in progress during two years, and was consecrated on the 20th of June, 1825. This work has been greatly admired. It deserves examination as much for the treatment of its interior as for the effect of its portico,—much marred, it must be confessed it is, by a state of griminess even exceeding that of other London buildings, and which has been ascribed to the oiling that was adopted for the preservation of the stone.

Mr. Cockerell's numerous friends, made in Italy, or previously, had now become useful to him; and he was actively employed. Indeed in 1821 to 1824, he was engaged upon some sixteen or eighteen works of more or less importance. Besides those already mentioned, the number includes a chapel at Bowood for Lord Lansdowne, the Bristol Literary and Scientific Institution, several large country-houses, and other buildings or designs to be immediately named. In 1824, the exhibition of the Academy contained his "Sketch of Athens, as it may have been in the Time of the Antonines; the principal features from drawings taken on the spot in 1811." This was the companion work to the View of Rome. In 1829 he exhibited, "View of the College of St. David's, at Llanepeter [Lampeter] Cardiganshire, erected by subscriptions raised by the late Lord Bishop of St. David's, and the Rev. Dr. Burgess, and under the patronage of his Majesty George the Fourth," and "Sections of the National Monument of Scotland, of which the western portico is already erected on the Calton-hill, Edinburgh; being from the model of the Parthenon of Athens, and of the same dimensions, 228 feet by 102 feet. The porticoes and vestibules are adapted to the reception of commemorative statues, and the interior to the purposes of a church." The subject of the "View" is curious as one of the very few Gothic buildings that Mr. Cockerell designed. The work shown in the "Sections" is known to most of our readers as having been commenced, but as being still incomplete.

We should here mention that, during the progress of the Greek insurrection, Mr. Cockerell was an active member of the London Committee.

In 1828, in June, he had married Miss Rennie, second daughter of John Rennie, the celebrated engineer. He was just turned forty years of age. In 1829, he was elected an Associate of the Royal Academy. About the same year, was commenced Trinity Church, Hotwells, Bristol, which was in progress for three years following. Between 1829 and 1837, he was engaged in three separate competitions for the building of the Cambridge University Library. Ultimately he was employed; but one wing only was built. This may have been so late as 1839.

Notwithstanding Mr. Cockerell's professional avocations, he never ceased working in those particular branches of æsthetics and design to which he had always in a great measure devoted himself. Besides his exhibited restorations, he was occupied (as he continued to be for twenty years) upon the preparation of a work already alluded to, upon the structures of Ægina and Phigaleia, which he eventually published, and which we recently reviewed. In 1830, he exhibited a drawing entitled "Restoration of the Western Pediment of the Temple of Minerva Parthenon, at Athens; done at the request of the trustees of the British Museum for the illustration of the Elgin Marbles," a quotation being attached to it from Pausanias. In 1832, he exhibited "The Theatre of Pompeii Restored, as it may have appeared in the interval of the Earthquake, A.D. 63, and the final catastrophe which overwhelmed the City, A.D. 79," and a "View of the Westminster Life and British Fire Office, lately erected in the Strand under the direction of" the exhibitor. The building in the Strand here mentioned, which is at the corner of Agar-street, has undergone so much plasterers' and painters' work during its several recent changes of occupation, that we could not answer for its fairly representing now the original design. But the truth is, though exhibiting many of the features and something of the character to be found in the author's latest works, which were some of his best, it was never quite pleasing; and we believe a very useful essay might be written to point out reasons for the difference of expression resulting from works having so many points of resemblance, as the earlier and later. It is enough here to say that we think it could be shown that one reason of the comparative shortcoming of the Strand building, would be found to start from the use of cement; a material which has, as usual when treated as stone, not only the defect, whether dirty or newly-painted, of perfectly even tint or shininess, — the last things that an artist would think of representing in a drawing,—but which facilitates the introduction of a multitude of features, and rather seduces the architect to introduction of them at a quicker rate than he can keep pace with by study, or often in excess of the demands for consistent decoration along with relieving plain surface. Still, our architect was making an experiment in a path which he subsequently made his own—that of forming a version of the Italian, in which all advantage should be taken of the knowledge of the Greek orders and Greek ornament, to produce a Greco-Italian,—a style, new, whilst the best development of the parentage.

About the year 1833, Mr. Cockerell was appointed Architect to the Bank of England, on the resignation of Sir John Soane. In that capacity, he designed and superintended some important works. He seems almost immediately to have been engaged upon the new dividend pay and warrant offices and accountant's drawing-office, forming the south side of the garden-court in the Threadneedle-street buildings. This work was one of the best things he ever did. It was, however, pulled down to make room for the present drawing-office erected by him about the year 1847 or 1850. Its general arrangement, and the allegorical and other ornamentation, designed part of it by Mr. L. G. Rennie, sculptor, are shown in four lithographic plates, which were dedicated to the Governor and Directors of the bank, by the architect and the sculptor named, in the year 1835, but which possibly were not published. The paper-cover displays some Greco-Roman ornament, designed and drawn by Mr. Cockerell in his best manner.

In 1836, Mr. Cockerell was elected a Royal Academician. In the London and Westminster Bank, in the City, commenced in the following year and completed in 1838, Mr. Tite was associated with him, but apparently the design was in the main Cockerell's. The Greek feeling in all the details, the openings of sufficient width for light, and having metal shafts or mullions, and the columns within the entrance, with shafts fluted only at the base and necking, as those of the Temple of Apollo in the island of Delos, are peculiarities which we recollect. In the year 1838, of which we were speaking, we find that Mr. Cockerell had removed to No. 87, Eaton-square. In this year, he exhibited his "Tribute to the Memory of Sir Christopher Wren, being a Collection of his Principal Works," with the motto *Lector si monumentum requiris circumspice*. The engraving from this, not so exact in the details as such a subject required, is well known. In 1840, Mr. Cockerell was appointed Professor of Architecture in the Academy. He succeeded Wilkins.

Mr. Cockerell had been one of the competitors for the building of the Houses of Parliament, as he had been for the National Gallery, and the London University; and as he was, later, for the Carlton and Reform Clubs; and, somewhere about the year 1840, he was in competition with Mr. Tite for the Royal Exchange. The circumstances under which this competition took place, have been of late so much misrepresented, that we could wish to state them were there space. Suffice it to say, that the competition between the two architects named was not the first one; there had been a general competition, when a design by Mr. Grellier, since deceased, had been accorded the first place in one class, and a design by Mr. Donaldson the first place in another class not deemed within the instructions. However, passing over the *mêlée* waged after the announce-

ment of the first decision, and over the strife that was renewed by the reviews and journals, when the question lay between Professor Cockerell's design and Mr. Tite's, we may state that the first architect's design, of which a large model was to be seen, had for its chief feature salient columns in the front, supporting statues; and in some respects can be regarded as an expansion of the design of the Roman triumphal arches. A drawing, representing essentially this design for the Exchange, appeared in one of the exhibitions of the Academy; and we believe it is the work styled in the catalogue of 1841, "Study for the Front of a Public Building." Somewhere about this time Mr. Cockerell went to reside at North-end, Hampstead.

The Taylor and Randolph buildings, Oxford, belong to the date 1841-42, and form a work beautiful in the grouping and in the details. The ecclesiologists, however, stigmatized the architect as "one who paganizes in the Universities;" and could not be got to see such merits as we have instanced. There is one peculiarity in the design which certainly should be mentioned here: the real entrance is not where the portico is; but however this be regarded, one must have little feeling for art not to appreciate the beauty that exists in the work. The Sun Fire-office, in Threadneedle-street, belongs to about the date 1842. It has some excellent details, and has the novelty of orders in the upper portion of the building and not the lower. In the same year, certain works of renovation and cleansing were in progress in St. Paul's Cathedral. About this time, or possibly later, several branch banks of the Bank of England, were erected from his designs. The chief of these are at Manchester, Liverpool, Bristol, and Plymouth. It may be said of them that their impress is one in character with their purpose, that their general forms and details are the result of original thought, added to that of study from examples, and that they are works which may be handed down to posterity as amongst those creditable to our age.

Professor Cockerell, talented himself, and naturally gifted with the disposition to admire merit in others, and to help it on if needed, gave evidence of these features of his character, through the generous praise that he awarded to Elmes's efforts in the realization of the design of St. George's Hall and the Assize Courts, Liverpool. He went further: he gave to Elmes's work the contribution of his artistic abilities. In 1846, in the exhibition of the Academy, appeared the drawing entitled "Design for the Sculpture of the Pediment of St. George's Hall, at Liverpool, now erecting under the direction of H. Lonsdale Elmes, Esq., architect. Composed upon the Greek system of the Parthenon, and other examples, in entire statues, with symmetry of parts and eurythmy of lines and quantities. The subject represents Britannia in the centre, and Neptune at her feet; in her left she holds out the olive-branch to Mercury and the four quarters of the globe, of whom the last, Africa, does homage to the liberty she and her children owe to her protection; beyond, are figures representing the vine, and other foreign commercial productions; in her right she extends her protecting spear over her own productions—agriculture, sciences, domestic happiness, the plough, the loom, and the anvil." After the death of Elmes, the praise which Mr. Cockerell publicly gave to his work, and the generous exertions for his widow, will not soon be forgotten. Elmes died in 1847, and from that time to the completion in 1854, the building was under Mr. Cockerell's hands. To the professor is due the completion and ornamentation of the interior, including the concert-hall, and the *emplacement* or accessories of the area, in which last he was not altogether so successful as in the interior. To the year 1847, is to be ascribed the Church of St. Bartholomew, Moor-lane, in the City, erected in lieu of the church destroyed for the extension of the site of the Royal Exchange, and in its tower intended to recall the general character of that of the old building.

In 1849, he exhibited "The Professor's Dream: a Synopsis of the principal architectural monuments of ancient and modern times, drawn to the same scale, in forms and dimensions ascertained from the best authorities, and arranged on four terraces—Egyptian, Grecian, Roman, and Mediæval and Modern; the last of which shows more particularly the comparative height: this synopsis being a development of that first published in the 'Useful Knowledge' Society's Life of Sir Christopher Wren."

In 1854 the name of his son, the present Mr. F. P. Cockerell, first appears as an exhibitor in the Academy.

Mr. C. R. Cockerell commenced his latest building in 1855. This was the structure for the Liverpool and London Insurance Company in Liverpool. It was completed in 1857. At some period of his career, he built a work not yet named, and in the Gothic style, the chapel and speech room, Harrow. He also completed the Fitzwilliam Museum, Cambridge, after the death of Mr. Basevi. Doubtless he produced many other works; and of some of those we have named it might be impossible to pronounce opinion without the works themselves before us. It may be that his reputation will depend more upon his well-known æsthetic acquirements in all branches of art, than on executed works, which though generally appreciated, are not so numerous as those of many of his contemporaries.

In 1857, his name first disappears from the Academy list of professors: but he could not be idle; and in 1858, he exhibited a "Study of the Mausoleum at Halicarnassus, from the texts of Pliny, Vitruvius, and Martial, from the measurements of the fragments recently excavated by the British Government, and now in the British Museum, and according to the idea published in the *Classical Journal*, 1847, by Mr. C. Newton and the author, C. R. C., R.A." On the death of the Earl de Grey, as said, he accepted the office of president of the Royal Institute of British Architects, at urgent request. He had previously been recommended to her Majesty, by the Institute, to be, and had been, the first recipient of the Royal Gold Medal.

We cannot here recapitulate even the prominent features of his lectures; but this brief record would be incomplete without a reference to the fulness and variety of the information which he conveyed, orally, and by the help of a most extensive collection of plans drawn to the same scale, and by numerous other and most valuable illustrative drawings. Never has lecturer in the Academy collected around him more attentive listeners. Whilst he strove to inculcate eternal truths of composition, or to explain the facts of architectural history, and the legacies of the past, he sought also to show the way to promote the influence of the profession for good. The architect was ever to conduct himself as an educated gentleman, fitted for the society of the learned and great,—equally ready "to take by the hand the humble artificer." It was impossible not to feel warmed by the fervour of the Professor's manner at frequent times, and touched by the kindliness of his interest in the battle, and the responsibilities, of every student's life.

In his earlier lectures, he had spoken against the taste for the revival of Gothic architecture, in words which seemed not sufficiently appreciative of that style. In subsequent lectures, however, he expounded what he conceived to be the system of proportions of the Gothic cathedral.

As a member of the Archæological Institute, he contributed valuable papers on Sculpture in its relation with Gothic architecture, and other subjects. In fact, he was enthusiastic on Mediæval art. In the Transactions are his essays on "The Architectural Life of William of Wykeham," "The Sculpture of Lincoln Cathedral," and others. His best known essay printed in separate form, is one illustrative of certain Mediæval works which he long studied especially. It was entitled,—"Iconography of the West Front of Wells Cathedral, with an Appendix on the Sculptures of other Mediæval Churches in England," and was published in 1851.* He fell into some errors, however, in this essay, which have since been pointed out. He also made many contributions to the Library of Useful Knowledge, and the Classical Museum; and during the controversy on the subject of placing the statue of Wellington on the arch of the Green Park, he supported the contrary course, with learning and judgment. Mr. Cockerell, however, before coming to the publication of the noble volume of 1860, had given to the world in the supplementary volume to the second edition of Stuart's "Athens," the results of his researches at Agrigentum into the arrangement and details of the temples of Jupiter Olympius and Hercules. In 1857, to the "Illustrations, Architectural and Pictorial, of the Genius of Michael Angelo Buonarotti," published by Mr. Harford, he contributed a most interesting letter, wherein he succeeds in clearing the fame of the artist from some of the aspersions which have arisen from the interference with his work by his successors. All his contributions to architectural literature, however, are overshadowed by that which he completed at the close of his valuable life.*

* Oxford and London: John Henry Parker. 4to. pp. xxiv., 126, and 115, with lithographs.

Besides being a Royal Academician and Professor, and a Fellow, President, and Royal Gold Medallist of the Royal Institute of British Architects, Mr. Cockerell was an honorary Doctor of Civil Law, of Oxford; a member of the Society of Dilletanti, one of the eight *Associés étrangers* of the Académie des Beaux Arts of the Institute of France (being elected in 1841), and a Chevalier of the Legion of Honour; one of the ten Members of Merit of the Academy of St. Luke in Rome, and a Foreign Honorary Member of the Royal Academy of Fine Arts of Bavaria, Munich; of the Royal Academy of Denmark, Copenhagen; and of the Academies of Geneva and Genoa, of the Archæological Society of Athens and the American Institute of Architects, and an Associate of the Royal Academy of Belgium.

It may be added, that Mr. Cockerell was one of the most active members of the direction of the School of Design, Somerset House.

To such a man, a public funeral in the church over the structure of which he presided, and a grave near that of the great architect whose works he had so much esteemed, were fitting tributes from the hands of those by whom he had been honoured and loved, his associates and pupils. The council of the Institute of British Architects therefore, with the concurrence of the family, sought the permission of the Dean and Chapter of St. Paul's for the interment of the remains in the crypt of the cathedral; and this being obtained, invited the members of the Royal Academy to associate themselves with the Institute on the occasion. The place in which the remains are now deposited in the crypt below the choir and aisles, is in the second or middle bay of the south aisle, close to the grave of Rennie. The easternmost bay where in the window recess, is the grave of Wren, was fully occupied by the remains of various artists. The pall-bearers were Professor Donaldson, the president of the Institute; Mr. Owen Jones, Mr. Penrose, and Mr. C. C. Nelson, of the Institute, on one side; and, representing the Academy, on the other, they were Mr. Sydney Smirke, who is the present professor of architecture, and is also of the Institute, Mr. Knight, Mr. Charles Landseer, and Mr. Calder Marshall—four Royal Academicians. The profession was numerously represented.

THE WALL PAPERS OF THE PRESENT SEASON.

MUCH has been written and said during the last few years concerning wall-papers, with the view of bringing about an improvement in their art qualities. Critics have pointed out their defects. Theorists have dwelt upon the nature of the surface to be decorated, and the necessity for the harmony of the ornament with the conditions of the surface on which it rests. The subject has been brought before the public; and, although opposite views have in many cases been advocated with much cogency, the desire of the advocates of the various views has been that of bringing about the advancement of art as associated with the wall-paper decoration.

Fifteen years back, no wall-paper was considered fit for the market unless its forms were brought into the highest relief by dint of light and shade. Loose scrolls, or irregular masses of meaningless ornament, heaped together, with but little order, had favour with the public, and floral patterns were considered the *beau-idéal* of beauty. Flat patterns were considered tame and meaningless, and the fact that, if produced, they invariably proved commercial failures, demonstrated that the public was unprepared to receive them.

Schools of design had been some time in existence, but they were few in number, and were thus incapable of materially affecting public taste. Besides this, they were as yet little more than drawing-schools, for it was well known that a great power of drawing must be gained before designing could satisfactorily be attempted.

Not only were these schools little more than drawing-schools, but they had adopted no regular principles upon which designs were to be founded: the schools had arisen with the view of enabling us in some measure to cope with our French neighbours in the market of design, and our chief

* "The Temples of Jupiter Panhellenius at Ægina, and of Apollo Epicurius at Bassæ, near Phigaleia, in Arcadia, by C. R. Cockerell, Professor of Architecture in the Royal Academy, &c., &c.; to which is added a Memoir of the Systems of Proportion employed in the Original Design of these Structures, by William Watkiss Lloyd. London: John Weale, 59, High Holborn. 1860." Pp. x. and 94: Ægina, 11 vignettes, 17 plates; Bassæ, 2 vignettes, 16 plates.

aim was to follow the example of our more advanced rivals.

Shortly after the close of the parent of all International Exhibitions, the schools of design were increased in number, a "Department of Practical Art" was organised by the Government to minister to the art wants of the country: a training-school was established in London with the view of educating art-masters who should diffuse a true knowledge of ornament throughout the kingdom; and a museum of works of art was founded.

In connexion with the foundation of this extended system of art education, Mr. Owen Jones was requested to give a series of lectures with the view of laying down principles such as the newly founded institution might safely follow.

The principles laid down seemed diametrically opposed to the public taste. As a wall is flat, it was urged that all decorative forms placed on a wall should be flat also. Thus the wall-papers bearing ornaments in imitation relief were condemned. Flowers, it was said, should never be used naturally; but flat ornaments founded on flowers were alone legitimate. Thus floral patterns were doomed to the low places in art, and all shams were condemned. Thus granite papers on the staircase-walls of the poor were no longer permissible.

Statements so new to the world, and so contrary to entertained views, of necessity met with great opposition. No one received them, and many were champions in their opposition. Truth must win its way. Opposition was offered, yet the judgment felt the power of the arguments by which the new facts were upheld; and in time, the judgment being convinced, the tongue ceased to oppose what it had learned to regard as truth, even if the fear of condemnation through having adopted a new faith prevented any utterance in favour of the new creed.

Without further tracing the history of the effect of the new tenets upon national taste in its gradual development, let us notice at once the nature of the wall-papers produced for the present season. An observation of these will obviously reveal to us the present state of the taste of the nation in respect to such articles of manufacture, and will show us whether the upholders of the new tenets have gained a victory over public taste, or whether the opposition has maintained its ground. Before entering into a consideration of the nature of the new wall-paper patterns, it would perhaps be well to say, for the benefit of those who are not familiar with the usages of the wall-paper trade, that the new patterns are all brought out in the October of each year, and that there is as much pains taken in the production of the year's designs to meet the public taste, or to keep the fashion, as there is on the part of ladies to follow the example of their French dictators of dress.

We have been afforded an early opportunity of seeing many patterns for the coming season; and this is worthy of special note, that scarcely a floral pattern is to be seen amongst them. Even ornamental or conventional treatment of flowers is rare amongst them. These form a class of patterns which is not wholly without its representative in the coming season, yet they are by no means common. A little conventional fuchsia by Messrs. Turner & Oust, and a treatment of the pansy by Mr. John Catto, are fair representatives of the class. The greater portion of the designs are in conventional ornament. Some few are in the historic styles, a pure Gothic or a simple Greek appearing here and there; but the great majority of the patterns are in what we may call the modern style, as they consist of new forms which cannot be classed with those of any by-gone age.

It seems to us a peculiarly happy fact that but few of the patterns are formed of the ornament of an historic style. The rooms in Greek buildings may advantageously be papered with a wall-paper bearing Greek ornament; but few houses (the buildings in which wall-papers are chiefly used) are Greek in character; and while Gothic houses should be papered with Gothic wall-paper, but a small proportion of the houses which we erect are of Gothic architecture. Whatever may be said to the contrary, it is doubtful whether any style of architecture which has arisen and passed away with a people is appropriate to us. Modified to meet the wants of the present day, a style might, perhaps, reappear in a manner consistent with our feelings. But what we want is an architecture having those qualities of past styles which are appropriate to us, and will yet embody and hand down to after ages *our* sentiments and faith.

The great majority of our houses are merely erections in which we may dwell, rather than monuments of architecture. To the rooms of such buildings any wall-paper may be applied without any great contradiction being induced between the stonework and the decoration. Yet a pattern fully setting forth the sentiments of that period in which Gothic architecture prevailed as a national style would scarcely be appropriate to the walls of such a structure; neither would a pure Greek pattern. Forms or shapes have associations bound with them which lead us to seek for a harmonious response to their utterances: hence it is better for a plain house to dispense with a pattern which is a severe treatment of a by-gone style. To all such houses, good patterns in new ornament will be very welcome, and we are bound to say that in our judgment the wall-papers of the present season offer much that is very satisfactory.

But all our houses are not without some pretension to architecture. Many new dwellings are very worthy attempts at combining beauty with utility, and no few are novel in character and fresh in their effect. There are houses which are Italian in their features, but there are also many which are neither Italian, Gothic, nor anything else in their expression; and this character of dwelling requires the production of wall-papers which are beautiful, and yet are neither in a classic nor ecclesiastical style of ornament. As regards the new patterns which we have seen, most are in a simple yet vigorous style. Many seem to be the productions of ornamentists well acquainted with their art.

That there is much scope for the production of good ornament in wall-papers is proved by the patterns before us, for some are certainly all that could be desired as wall decorations of a transitory character. The newest things that we have seen are issuing from the firms of Messrs. Cook, of Leeds, Jeffery & Co., Catto & Co., Wm. Woollams, Jno. Woollams & Co., of London; but many good things are also coming from the firms of Scott, Cuthberston, & Co., Turner & Oust, and Carlisle & Clegg, of London; Snape & Co., of Darwen, and others equally deserving of notice with these; but we have had no opportunity of seeing their works. This, then, must be distinctly understood, that those whose works are left without notice are not necessarily undeserving it.

To some of the manufacturers thanks are due, as will appear from the following:—Some short time since, when conversing with one of the *largest* wall-paper manufacturers in the kingdom (who by no means produces the best patterns), upon the necessity for better designs and purer ornament, we were informed that the better patterns did not yet pay as well as those which were inferior in character. "They will pay," said the manufacturer, "but some one must lose by them, or make but little for the time: there must be a few martyrs. WE are neither disposed to be martyrs nor to lose; but as soon as ever they PAY best we will produce them!"

Here is a manifestation of a spirit too frequently exhibited. A strong desire for progress must animate that man who will produce good designs when they *pay best!* Such a man must surely be a hero. Many manufacturers are, however, labouring to advance true art, though of small means comparatively. They are willing to do with small earnings in order to bring about advancement. These are true men, who are worthy of public recognition and thanks.

While speaking of wall-paper patterns, we may allude to an error which is in some cases committed. Greek patterns and Gothic designs are in some cases required, and are produced in order to meet the want. Wall-paper manufacturers frequently speak of flat patterns as Gothic, as though all flat patterns were of this style. This is obviously an error, but is not that to which we would call attention. What we wish to point out is the fact that both the Greeks and the artists of the Middle Ages employed different forms for the decoration of flat surfaces and the enrichment of stone by carving. Metal-work also had its particular treatment. The error which we often see perpetrated is that of using a treatment of ornament which is suited especially to metal or stone work on flat surfaces. Forms well adapted for cutting in stone are frequently unsuited to the decoration of walls, and modes of treatment which are necessary for ironwork are also inapplicable to the decoration of wall-papers. A want of the knowledge of distinctions of this kind leads to the perpetration of many minor defects, and frequently to the false representation of a style of ornament. In several of the new wall-papers, otherwise very meritorious, a peculiarity may be noticed which would seem to indicate that their designer was especially acquainted with the treatment of metal-work, ties and connecting members being carefully introduced, which would be necessary if the ornament were formed of separate pieces of metal, but are unnecessary and curious in the case of forms having only length and breadth. Great flatness prevails in most of the patterns, a feature which is desirable, and which acknowledges the condition of the surface on which the ornament is wrought.

The strange alterations in the character of wall-papers during the last fifteen years point significantly to the triumph of the new principles over the old dogmas of art; and, in our judgment, to a greatly-advanced knowledge of ornament on the part of the public. But perhaps the most striking change is the manifestation of a desire to give up the imitation granite and marble papers which have so long held their places in the halls and staircases of the middle classes. The desire for relief patterns has long given way, and the cherished floral patterns are little more than matters of history. While both have faded, the granite papers have remained; but they, too, are passing. Simple patterns suited to the hall and staircase are now sought after as preferable to the imitation of the more costly materials. Shams are surely destined to fade: true and simple beauty is preferable to flaunting show. The Greeks loved pure art, and sought to manifest their knowledge of beauty by their decorations. The Romans loved wealth, and sought to manifest their riches by their buildings. Thus slighted, Roman art declined; while, under the fostering care of the Greeks, art flourished. Our abandoning apparent lavishness, and embracing simple beauty with truthful expression, will certainly tend to the exaltation of art.

KITCHEN STUFF.

SIR WILLIAM ARMSTRONG'S remarks on the English coal-fields, at the recent meeting at Newcastle-upon-Tyne, are worthy of the most grave and careful consideration; for, doubtless, with the exhaustion of our "black diamonds," a large part of the prosperity of these islands would depart. Hopeful persons think that we are on the verge of other motive means than coal; that our towns will be lighted by electricity; and that new agents will be found for cooking our food and producing warmth. We have not, however, these means at our disposal yet. Indeed, Sir William Armstrong doubts the possibility of electricity superseding steam from coal at all, as a motive power; and he suggests no other substitute. Did modesty prevent him from hinting that his hydraulic inventions may to some extent fill up the gap from coal exhaustion? Meanwhile the consumption of British coals is yearly increasing. We have our steam-engines to drive, the gas-works to supply, our own fire-grates and those of a multitude of foreign neighbours to provide for, and great manufacturing, smelting, and other furnaces need to be fed with coals. It, therefore, behoves us to take the matter into account, to take stock of what remains, and look with care on this subject, on which the greatness of our country depends. There can be no doubt that, for many years to come, except from some new application, the demand for coals will increase, both at home and abroad. It is, therefore, of great importance that we should be economical in their use. And yet how terrible is the waste of this valuable article! Sir William Armstrong directed attention, as we have often done, to the unnecessary consumption of coals in our house and other fires; of the heat which is sent uselessly up the chimneys; the ill-construction of house stoves and cooking apparatus for the million. Much might be said on this point; but our object in just now referring to it is to direct attention to a remarkable example of the saving of money which can be effected by using improved plans.

In a large London establishment, in which 200 of the persons employed were boarded, in 1840, the butcher's meat consumed was 400lb. per head per year, and its cost 12*l.* 11s. 10d.; in 1850, the quantity consumed was 369lb., the cost 9*l.* 11s. 7d.; while in 1860 the quantity was only 271lb., the cost being 8*l.* 12s. The explanation afforded is this: in 1840 the butcher's meat consisted of second-rate joints, containing a large quantity of bone. When roasted, it was placed before a large fire, fixed on spits running through the joints, occasioning great waste, and producing indifferent results in the cooking, the outside being generally burnt and the inside not sufficiently done.

The inferior joints were abolished, and meat only of the best quality, free from bone, was purchased: the spits were laid aside, and the bottle-jack substituted in their place: the open fire for roasting was still retained. The balance-sheet for

this period shows a decrease of 98lb. per head of butcher's meat, and a saving of 3l. 0s. 3d. Another ten years passed, during which the open fire system was abandoned and the plan of cooking by gas was introduced: this caused a further saving of 98lb. per head, of butcher's meat, and of money, 1l. 0s. 4d., although the price of meat was higher by nearly 3d. per pound.

TO PREVENT POISONING BY LEAD PIPES.

FEW persons have become the occupants of a new house without some serious charge against the builder, on the score of drains; the architect, as to the sanitary or other mal-arrangements of the premises; or, failing to trace to either of these personages the cause of some sickness that has seized them, they decry the situation; or, if some sage friend has been consulted, and finds the situation favourable as to the four winds, the substratum is referred to; and then, if clay be the obnoxious foundation, even the pulling down of the house is pronounced useless as giving no remedy against the existing evil, which has been attributed to so many imaginary causes.

Of all the departments, the plumber's is the least suspected. He goes scot free: for if there be an abundance of water, what blame can attach to him? We do not say that blame *as yet* does attach to him, but we confidently assert that the cause of the evil is often found in his department. That metal which is so pliant under his hands, and can be so easily moulded to his will, with its bright clear face, that seems as if it would throw back with indignation any charge of poisoning, is the culprit after whom the whole house has been in search. In time the hunters are worn out in the chase; and having passed the worst, matters begin to mend; not so much from acclimatization, as the victims suppose, but from the pipes having changed their faces from a leaden hue to one more white; not, indeed, paled from sorrow at the mischief they have done, but from falling in with some companion who has tarried, and in whose society the metal is so engrossed as to cease to exercise a poisonous and deleterious influence over our own.

To those who have not been able to follow our analogy, let us sum up in clearer words.

Lead is soluble in pure water. A solution of lead is highly poisonous. There are cases in which pure water, drawn through leaden pipes, or from leaden cisterns, has carried a sufficiency of the lead in solution to poison a whole family. But a plea of exemption may arise from those who have not pure water. To such we would reply,—Impure water coats the lead, in process of time, with a white film of a carbonate of the metal, which is insoluble, with exceptions; one being the presence of water containing carbonic acid. Such water, in passing through the carbonate of lead, takes up an equivalent of the same, which equivalent may be sufficient to cause distinguishable colic, or set up a non-traceable source of indisposition through a whole family. We now approach the termination of our summary by answering a query that may be put by some sceptics. How is it that, after all, some lead pipes do not poison water? It arises from the fact that old age has wrought a change for the better in their disposition; for when water impregnated with sulphur salts has for a long time passed through leaden pipes, or has long acted on leaden cisterns, the lead becomes coated with a sulphate or a sulphide; and sulphide of lead, being perfectly insoluble in pure water, and equally so in water not too excessively charged with foreign matters to be potable, renders the leaden vehicle perfectly harmless, and thus perfects it for the duties which in all other respects it performs in such a utilitarian manner. But we have a moral to append to our subject. Are we to wait content to be poisoned until our pipes become transmuted, or what are we to do? The remedy is said now to be easily attainable without waiting. Dr. Schwarz, a chemist of Breslau, has made a discovery that cannot be too highly esteemed in a sanitary point of view, which is, that by passing a hot solution of the sulphide of potassium through leaden pipes, the interior face is transmuted from the metallic state to that of a sulphide in a few minutes, at a cost too insignificant to mention. If, then, the need of some change in our water conduit be satisfactorily shown (and we have endeavoured to do this for years), and the change proposed is based on equally well-known scientific truths; if water in the mines of galena, the sulphide of the noxious metal, be drunk with impunity, let us by all means see that for the future, at any rate, our pipes and cisterns be no longer silent poisoners; but made to support the character they have hitherto not fully deserved, of useful auxiliaries to the requirements of daily life.

SELF CULTURE.

UNDER this title Cardinal Wiseman delivered an address in the hall of the Hartley Institution, Southampton, to inaugurate the thirty-fourth session of the Polytechnic Institution. In the course of it the speaker said,—Self-culture might be divided into three distinct ranges or spheres, and had to be applied—firstly, to the intellectual powers; secondly, to the power of acquisition—the power of aggregating what is without to our own minds; and, thirdly, to the cultivation of the moral powers. These three powers were distinct. The first—the cultivation of the intellectual powers—had little or no aid from without. That was a work from within. Each man must cultivate his own intellect, his power of judgment, his power of acting through the operation upon the operations of his own mind. The second, the power of acquisition, was of a mixed character. It was the power of bringing into our minds and under the judgment of the intellect that which was prepared by others, and which we did not ourselves make, and which was not within us. It was mixed: there was the double operation, the acting upon materials which we had not naturally within our reach through the means of the faculties within us. The third power, again, was of a mixed character—that moral portion of our being which, while it has to be cultivated also within, yet has its action without, because from that come forth duties and obligations which reach those that are without ourselves; so that one is purely inward; the second is partly exterior through its objects; the third is partly exterior through its aims. Beginning with the intellectual powers, they were subject to a triple subdivision. There was, first, the power of thought, and what immediately depended upon it; and then came the imagination and the memory. Upon the two latter points his remarks would be very short, because the principles which he was about to lay down were embodied in the first point, on which he wished fally to open his mind. He did not intend to go into any metaphysical definitions or explanations of the power of thought, believing that he could make his meaning more clear by comparison and by illustration. He would take the sense of sight as the one parallel to thought in the mind, and trace its operation. The eye was never satiated, never satisfied with seeing. Whatever the multiplicity of objects, they held no place, but were continually changing. If we walked into the country alone by a pleasant path there was not an instant in which we did not see something—the trees, the cottages, the distant mountains: as we moved the head and inclined it in a different angle, as we moved the pupil of the eye, every possible change took place in our bodily relation to the outward objects presented to the vision; and yet all these objects were connected, and there was not a moment without some picture being presented to the eye. Exactly so with thought. We were never a moment without thinking. Even while reading a book there was a train of thought passing through the mind, over which it exercised no control. One thought succeeded another, more linked, more united by the power of association than the objects that met the eye. That corresponded exactly to the action of the eye. It would be exceedingly difficult to render an account of the thoughts passing through the mind during the day. But there was another power,—the power of arresting thought; and there commenced the self-command necessary for self-culture. A man might pass a whole day never distinctly distinguishing any object with his eye; but, by exercising a certain degree of mental power, he might stop, and examine some object, and fix it upon his memory. With respect to the eye, that would be observation; to the mind, it would be reflection. When thoughts were passing through a man's mind he might consider some one of them rather singular, and reflect upon it, and thus arrest the current of thought, and fix upon something distant which would occupy his mind in future years, and lead to something useful and practical. That was the second step. But there was a third, and a higher and more important one. A man might not be satisfied with a passing view of an object, but desire to know something more about it. For instance, in looking for the first time at the ruins at Netley Abbey, he saw all that could be seen in passing by. That was observation. It occurred to his mind that, if ever he passed that way again, he would make an examination into its architecture, and try to make out its history, having previously gathered such information as he might be able to do from books treating on the subject. That would be a very different degree of observation from either of the first, and might be called contemplation. That would be seeing in the highest sense. Exactly the same thing took place with regard to the mind. A man might say, "I wish to cultivate my powers of thought. I am not satisfied with dwelling for a few minutes on a thought which invites my attention. Here is a great question on which a thoughtful and earnest man cannot remain satisfied in ignorance, and I will study it." For this purpose he would collect the necessary materials, and exercise the varied powers of his mind, and memory, and reasoning, until he came to a solemn and well-matured decision how he ought to think and act. That was the course of thought,—the operation of the mind corresponding exactly with the third operation of the sense of sight; and this analogy brought forward all the processes of which thought was capable.

GAS.

A NEW gas company has been formed for the additional supply of Guildford, Godalming, Shalford, and neighbourhood, with gas at a rate not exceeding 5s. per 1,000 cubic feet. The attendance at the meeting of gas consumers and others to form the company was both numerous and influential, and those present, by their resolutions, appear to be determined to carry out their object, and so procure a supply of gas for themselves both cheaper and better, as well as more abundant in quantity than the old company has heretofore supplied. Captain Mangles occupied the chair, and Mr. Hughes gave an elaborate and able exposition of the state of matters, and carried the feeling of the meeting entirely along with him, the result being a series of resolutions for the immediate formation of the company.——It is stated by Mr. Flintoff, in his lectures on gas-lighting, about to be published, that there are in the metropolis thirteen gas companies, having twenty-three stations for the manufacture and sale of gas. The capital invested is 5,801,815*l.* 3s. 8d. The amount received for gas alone in 1862 was 1,498,569*l.* 15s., so that the quantity *paid for* by the public would be six hundred and sixty millions of cubic feet. During the same period the coals used cost 728,555*l.* 0s. 1d., which yielded 335,411*l.* 5s. 10d. for coke, tar, and ammoniacal liquor, so that the cost of coal, fuel, for generating, and leakage and losses in transmitting 1,000 feet of gas from the works to the consumer, is only 1s. 2¼d.——The Bristol Gas Company have announced their intention of reducing the price of gas, from the 1st of January next, from 3s. 9d. to 3s. 6d. per 1,000 feet.——At the half-yearly meeting of the proprietors of the Birmingham Gas Company, the usual maximum dividends were declared, and the affairs of the company were reported to be in a satisfactory state.——At the annual general meeting of the shareholders of the Downpatrick Gas Company a dividend at the rate of 6 per cent. was declared payable on 1st October; and a resolution passed to reduce the price of gas to consumers, to 6s. 8d. per 1,000 feet, on all gas supplied from the 1st January next.

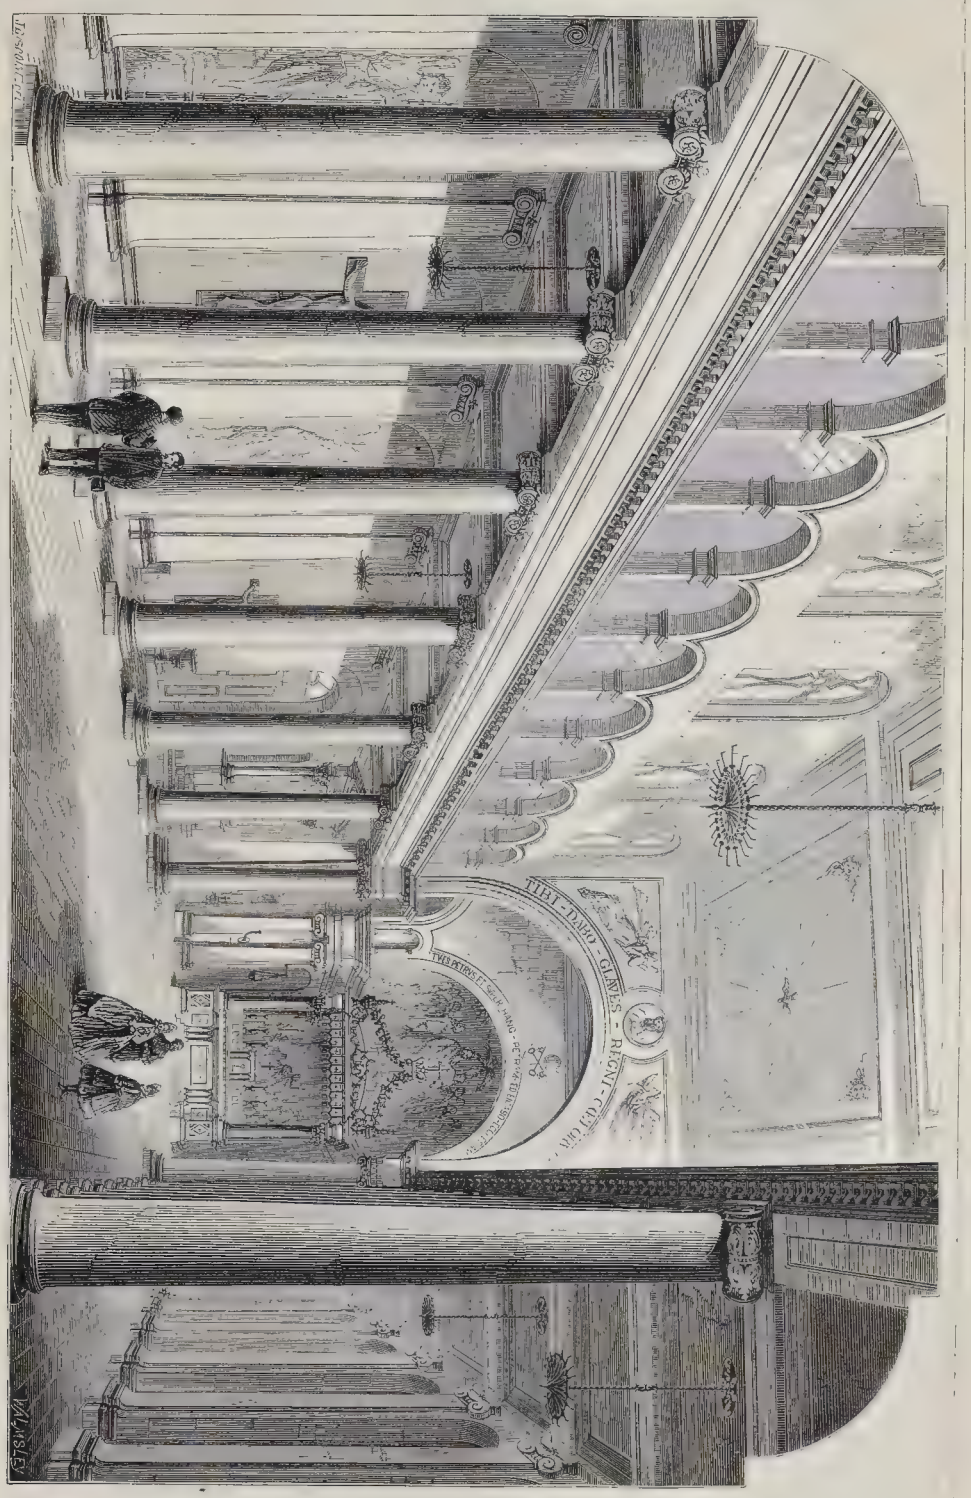
NEW ITALIAN CHURCH, ST. PETER'S, HATTON WALL, HATTON GARDEN.

THE first portion of this building has been erected from the designs of Mr. John Miller Bryson, architect, to accommodate 2,000 persons; but when the proposed extensions are carried out, it will be capable of holding 3,400. The walls are of grey stock bricks, tied together with iron hoop bonding at intervals of every 6 feet in height, laid in cement all round the building. The columns that support the triforium and clerestory are of hard York stone, and of the Ionic order. The piers of the triforium are of similar stone, with merely plain caps: eventually the caps will be of the composite order. There are two side aisles, a nave, chancel, and apse. The edifice is in the Roman basilica style, the only church of the same style in the kingdom. Statues of the four Evangelists are in niches, two at each side of the chancel. There are two galleries in the church, one on either side over the side aisles (as triforia), to which access is obtained by means of stone stairs. At each side of the high altar there will be the means of communication with the sacristy, but this portion has been suspended from

EQUESTRIAN MONUMENT TO THE EX-KING LEWIS I., MUNICH.* [* See p. 682, *ante*.

want of sufficient funds. Under the chancel there is a subterranean church or crypt, which was opened on the 25th December of last year. The crypt is entered from Back-hill, and is capable of holding 200 people.

When all the works at present contemplated are executed, there will be a priest's house in Back-hill, part of which is now erected, and schools in George-yard, where from 400 to 500 boys and girls will be educated. There will also be a hall of debate for the temperance society.



When the church is completed there will be five entrances, viz., three in Little Saffron-hill, on the site where five houses now stand; and in that direction east the church will be extended, having a cut stone front and portico.

The ceilings are flat, in a series of panels, which will eventually be painted, as also will be the walls. There will be a tower at the south-west end of the church (part of which is now built), carried up to a height of 100 feet, where will be hung a bell (weighing four tons) that was purchased of Messrs. Vickers & Co., of Sheffield, and shown at the International Exhibition last year.

The high altar has four polished black and gold marble columns, standing on pedestals, with white marble caps and bases of the composite order, surmounted with a cornice wreath, crown canopy, and cross, which will be gilt. The tabernacle and steps of the high altar are of different coloured marbles, all of which have been obtained from Italy.

The church at present is 138 feet long and 70 feet wide: the height from floor to ceiling is 56 feet. The side aisles are 88 feet by 17 feet, and 20 feet high. The triforia are 88 feet long and 10 feet wide, having small rooms at the sides for keeping the valuables connected with the church. The body of the church is lighted by clerestory windows, in each of which is a design in the shape of a cross, made of iron and wood. The chancel is lighted by windows of a similar design and make.

The amount expended up to the present time, including the portions executed by contract, and those portions carried out on day time, as well as the amount paid for the site, is about 15,000*l.*, which has been collected abroad by the priests connected with the church. It would probably be unfair to criticise the building in its present unfinished condition.

ST. PETER'S NEW ITALIAN (R.C.) CHURCH, HATTON WALL, LONDON.—MR. JOHN M. BRYSON, ARCHITECT.

THE REGISTRATION OF DEATHS.

WE have several times directed attention to an imperfection in the management of the registration of deaths, particularly those of young children; and many facts have come before the public, which show the truthfulness of our statements. The case of the Hackney undertaker, and that of the wholesale discovery of remains in the tower of Whitechapel Church, are the two most recent important examples of the working of the present arrangements. As regards infants, it is very clear that the case with which the so-called "still-borns" can be disposed of affords a ready opportunity, and is even a temptation, for the murder of infants whose mothers may find it desirable to get rid of their offspring. Thousands of women in London alone each year bring children into the world without the aid of the proper medical practitioner. And we all have some idea of the nature of a large number of the midwives, and "Sarah Gamps," who practise amongst the poor. Nothing is at present more easy, if it is not desirable that an infant should live, than for the nurse and mother to arrange its death: to go to some undertaker for a box for a still-born child and then convey it to the undertaker, or even to the grave-digger of some cemetery, who, although the child has been destroyed, will bury it for 2s. 6d., without making the least inquiry. Even at the risk for a time of causing the disgraceful exposure of dead infants in our public places, this should be put a stop to: it should be forbidden by the law, under a severe penalty, that any interment of even a "still-born" child should be allowed to take place without a medical certificate; and punishment should fall on undertakers, nurses, and others who are implicated in assisting in the disposal of human remains without a proper certificate. We have well studied this matter, which affects a large amount of infant life, and are aware of the difficulty—even the impossibility—which there is for many to provide proper medical attendance at the time of child-birth; but, if it were known that no burial could take place without a certificate, and that punishment would follow concealment, a large part of the mischief would be stopped, and many children who would have been wrongly buried, saved alive. To carry this out in poor neighbourhoods would entail extra labour upon the parish district surgeons; but, in that case, they should have additional remuneration, or a larger staff of those useful workers should be appointed. In a matter of life and death—and, in what is to us a cause of both shame and sorrow, —a little extra expense should not be taken into consideration. We trust that this will meet with attention at the next meeting of Parliament, and that the present facilities for the murder of the innocents will not be much longer allowed. This is a matter which affects both town and country.

CONGRESS OF BRITISH ARCHÆOLOGICAL ASSOCIATION.

THE meeting will commence, as we have before mentioned, on the 12th of October, at Leeds, and be continued until the 19th, at York, where it will terminate. It will be presided over by Lord Houghton. The business will commence at the Town Hall, where the president, associates, and visitors will be received by the mayor and corporation of Leeds, and the president will deliver his address. In the evening, papers will be read and discussed; and among those already prepared may be mentioned,—Mr. T. Wright, "On the Early History of Leeds," and "On the Discovery of Anglo-Saxon Jewelry and other Antiquities by the late Lord Londesborough, at Seamer Lime Quarry, near Scarborough;" Mr. Planché, "On the Badges of the House of York;" Mr. C. E. Davis, "On Ripon Cathedral, the Crypt commonly called St. Wilfred's Needle," etc.; Mr. Gordon Hills, "On Fountains Abbey;" Mr. Edw. Roberts, "On Kirkstall Abbey, and on Adel Church;" the Rev. Mr. Hartshorne, "On the Honor and Castle of Pontefract;" Mr. F. R. Wilson, "On Wakefield Wayside Chapel;" Mr. E. Levien, "On unpublished MSS. relating to Meaux Abbey;" Mr. George Wentworth, "On Ancient Houses in Wakefield, on Aldborough, and other places to be visited;" Mr. H. Syer Cuming, "On the Weapons of the Ancient Tribes of Yorkshire;" Mr. O'Callaghan, "On the Discovery of an ancient Boat or Canoe, at Giggleswick, near Settle," and "On Historical Autographs;" Mr. Baigent, "On Walter Giffard, Archbishop of York A.D. 1266–79, and his Brother, Godfrey Giffard, Bishop of Worcester A.D. 1268–1302;" Mr. John Jones, "On Harewood Castle;" Mr. Clarence Hopper, "On a Petition to Oliver Cromwell from the Town of Leeds, in 1656;" Mr. Leyland, "On the Roman Roads intersecting the Parish of Halifax;" the Rev. Mr. Scott F. Surtees, "On the Locality of Hengist's last Battle, and his Burial Place;" Mr. Shaw, "On Masons' Marks;" Mr. Lukis, "On Cromlechs," &c.

The excursions will commence on Tuesday, the 13th;—first, to Adel, to view the church; to Ilkley, the Olicana of the Romans, where also are to be seen in the churchyard some Runic crosses; thence to Harewood Castle. On Wednesday, the 14th, the excursion will be to Ripon, to view the cathedral, the crypt, St. Wilfred's Needle, &c. If time permit, some antiquities in the town and its immediate neighbourhood will be visited, and the Association then proceed to Fountains Abbey. On Thursday, the 15th, an excursion will be made to the town of Wakefield, the ancient houses of which will be inspected, the records kept at the Town Hall and other muniments examined. A visit will be paid to Pontefract. On Friday, the 16th, the Association will proceed to Boroughbridge. The antiquities of this place, the Isurium of the Romans, will fully occupy the attention of the Association. On Saturday, Kirkstall Abbey will be viewed: thence the party will proceed to Bradford; after which they will go on to Halifax, and be received at the Town Hall by the mayor, inspect the old and new churches, and return to Leeds in the evening, to wind up the general business of the Congress, prior to their departure, on Monday, the 19th, to York, where the several antiquities in York will be pointed out, and the Minster, its crypt, library, &c., will be inspected.

THE NEW PRINCE OF WALES'S THEATRE, SYDNEY.

A HANDSOME new theatre has been opened in Sydney, with the performance of the opera "Martha." The Prince of Wales's Theatre, as it is named, has been built upon the same site as that which was destroyed by fire two years and a half since. Upon purchasing the property in the following year, Mr. Fitzgerald offered a prize of 100*l.* for the best design for a new theatre. The prize was competed for by four architects; and the design of Mr. J. F. Hilly having been preferred, he was instructed to take the necessary steps for proceeding with the re-erection of the theatre. In August, 1862, the works were put in hand, when contracts were taken by Mr. Alston for the masonry, and by Mr. Bishop for the carpenters' work. As the fire which destroyed the late theatre spared the front part of the premises, there was no occasion to rebuild that portion; and as a consequence there is nothing in the exterior of the theatre to call for notice. The dress circle and upper circle are, as in the case of the old theatre, entered from Castlereagh-street: the two passages are, however, to be thrown into one, and will form a saloon, 40 feet by 16 feet. The staircase is 8 feet wide, with two 8-feet landings. The upper circle has two staircases, one on each side: either of these can be used for ordinary occasions, and both will be available in the case of an alarm. There are two staircases leading to the gallery. We get some further particulars from the *Sydney Morning Herald*. The shape that has been adopted for the dress circle is that of a semi-circle with the ends curved outwards, so as to form on either side a pair of ogees, the figure somewhat resembling that of a flat-topped bell. Its superiority to the old horseshoe shape is proved, in the present instance, by the excellent view that is obtained of the stage from every part of the house. In the front of the dress-circle there are six rows of seats, which are 3½ feet in width, extending round the semi-circle; and there are private boxes at either angle, each about 14 feet by 12 feet: that to the right of the stage is to be the state-box. Imitation maple has been used for the fittings in the dress-circle, and the cushions are covered with amber satin.

For the front of the dress-circle the ogee shape is adopted. Above and below there are egg-and-tongue mouldings. At intervals there are carved trusses surrounded with wreaths of rose and thistle; and between these the panels are filled with open ornamental ironwork. The fronts of the dress and upper circle are of white, relieved with gold.

The upper circle and the gallery are similar in shape to the dress-circle, but they are more in recess. The height of the upper circle is 10 feet, and it is arranged for seven lines of seats, about 2 feet 8 inches in width, round the circle. The upper circle opens upon a spacious balcony, erected over the gateway from Castlereagh-street, which will be a great convenience to visitors to that part of the house.

The pit is 60 feet from the foot-lights to the back wall, and 58 feet in width, with a rise of 7 feet; and all the seats are fitted with backs. The height to the underside of the dress-circle tier in front is 10½ feet, and at the back 15 feet.

The proscenium has an opening of 30 feet, with a height of about 29 feet. The ornamentation principally consists of papier mâché scrollwork, in panels of French pink ground. In recesses on either side there are statues representing Comedy and Tragedy.

The stage has been fitted up throughout by Mr. John Renno, and is supplied with all the most recent appliances. The stage is 98 feet in length by 60 feet in width, and rises three-eighths and a sixteenth of an inch to the foot. The painting of the ceiling, of the act-drop, and of the scenes, has been performed by Mr. W. J. Wilson and Herr Habbe. The act-drop is from a picture by J. J. Chalon, R.A.: in the foreground is a pleasure-party embarking in a galley from beneath a Corinthian portico; the lake and the mountains in the distance being lit up with a bright Italian sky.

The provision for the lighting of the house consists of a sunlight, composed of a number of rings of jets, comprising above 130 burners. The brilliancy of this body of light is intensified by a chandelier of cut-glass, made by Defries, of London, and purchased in Melbourne for the theatre. For the footlights there are thirty-six burners; and for the ground and wing lights on the stage there are nearly 100 burners.

With a view to ventilation, flues have been built in the wall, 12 feet apart, and the gas-burners have funnels fixed over the lights and conducted into the flues in the walls. In the centre of the ceiling there is a funnel from the reflector conducted through the roof to the external air, and four other funnels of this kind from the angles of the building. Cold air can thus be admitted through slides in the pit floor, at any point where it may be found desirable.

The pit will seat comfortably about 900, or will hold on a crush double that number. The dress-circle and private boxes will seat 400, and, with additional chairs, 100 more. The upper circle and gallery will hold from 600 to 800 each, according to the closeness with which the people are packed. The receipts are estimated as follows:—Pit, 1,200, at 2s. 6d., 150*l.*; dress-circle and private boxes, 500, at 5s., 125*l.*; upper circle, 600, at 2s., 60*l.*; gallery, 600, at 1s., 30*l.*: total, 365*l.*

NEWS FROM SCOTLAND.

Glasgow.—Kelvinside Free Church, Glasgow, has been opened. The church is situate in Great Western road, nearly opposite the Botanic Gardens. It is seated for 1,000 persons. The interior is lofty, and the floor slopes toward the pulpit, which is low, and somewhat in the form of a platform. Attached to the church are a hall, which will hold from 300 to 400 people, a session-house, vestry, ladies' room, and beadle's house. The architect of the church was Mr. C. Douglas, of Glasgow. The style of the architecture is unusual, many features of French and Italian Gothic being introduced. The tower, which is 95 feet high, is crowned with the fork-shaped battlements common on Italian buildings of the Middle Ages, from within which rises to a height of 170 feet from the ground a square spire, ornamented at interv als with bands of ornament running round it- and by four smaller spires or pinnacles on the sides, supported on detached columns. The tower is without buttresses, and only 17 feet 6 inches square. The belfry stage rises clear above the roof of the church, and has on each side a large window ornamented with tracery and carving. At the base of the spire is a porch with blue granite columns. The church has a higher centre part or clerestory, with aisles leaning against it containing the side galleries. These are not placed, as is often done, across the windows, but have double lancet lights under them in each division, and wheel windows over them. The clerestory is terminated at the west end by an octagonal apse, in which is the entrance door. The vestibule is semi-octagon in plan, occupying the lower part of the western apse under the gallery. The dimensions of the church are —length inside, exclusive of gallery over west entrance, 72 feet; breadth, 52 feet: the length of clerestory is 88 feet, and its breadth 29 feet. The tower is founded by means of iron columns slipped down, through bores made in the rock, on purpose, to the bottom of an old coal waste, which

is about 50 or 60 feet from the surface of the ground; several mining engineers having advised that the tower, without some precaution of the kind, should not be placed over the old coal waste, the evidence of which in that part had been previously ascertained by boring. The tradesmen who built the church were—Mason, Mr. Milligen; wright, Mr. Nisbet; plumber, J. & G. Haddow; slater, James Stewart & Son; plasterer, Alex. Campbell. The heating apparatus was by Combe & Son, the ventilation by Gibson & Co., who also executed the large central gaselier. The stained glass was erected, under the direction of the architects, by Mr. Wailes, of Newcastle, and Mr. M'Alister, of Glasgow. The stone carving in the interior was done by Mr. W. Mossman—on the exterior by Mr. Shanks, and by Mr. M'Gaw. The painter's work was done by Mr. R. Steele; and the enclosure railing, &c., by Mr. Cameron.

Ayr.—The new compass pier at Ayr has just been completed. It is about 160 feet in length. Contractors having been advertised for, only one came forward, but his estimate was so large that the Harbour Trustees resolved to undertake the work themselves. Mr. Boyd, the harbour master, accordingly took the job in hand, and engaged men and procured materials; and the result is that he has erected the pier at an expense of something under 1,400*l.*, the estimate being 2,800*l.*! Mr. Boyd has also completed the work within two months of the estimated time. The stones were procured from four different quarries, viz., Bellstone, Kilwinning, Ardrossan, and Ballochmyle. The granite coping was brought from Newry.

Aberdeen.—A reply has been received from the Home Office to the report and plans for a new Court-house here, recently transmitted on behalf of the Commissioners of Supply for the county. The Home Secretary expresses his opinion that the estimate (27,125*l.* in gross) is too high, but adds that he will be ready to receive and consider any modifications. The Sheriff Court-house is proposed to form a part of the public buildings, to include also a town-hall and police accommodation.

SCHOOLS OF ART.

The Bristol School.—The annual meeting of this school has been held at the Academy, Queen's-road. Mr. P. W. S. Miles presided; and, in the course of his opening remarks, stated that, under the new rules adopted by the Department of Science and Art, prizes were now awarded only for merit, irrespective of numbers or attendance. He said this in explanation of the fact that prizes would be fewer in future than heretofore; but this should stimulate to further exertion. It was gratifying to know that the school had lately increased in numbers and efficiency. The committee reported that the difficulties under which the institution was labouring a year ago, were materially lessened. The expenditure had been brought within the income, and the financial statement for the year ending the 31st of March last, showed a balance in the hands of the treasurer of 130*l.* 2s. 10d. This agreeable result had been attained by the reduction of expenses, by an accession of receipts consequent upon the increased number of students, and by the aid of donations and subscriptions. The committee expressed a hope that the debt of 650*l.* would be liquidated. They reported that the artisan class especially, was increasing. The number of artisans in the evening class had increased from fifty-six in the month of March, 1862, to ninety-four in the same month of the present year. These gratifying results were in a great degree to be ascribed to the energy and ability of the head master, Mr. Hammersley. The increase of pupils had compelled the appointment of a second master, Mr. Alfred Nicholls.

The Cambridge School.—A local committee has been appointed for the establishment of a branch of this school at Huntingdon.

The Norwich School.—At a recent meeting of the town council, the subject of the School of Art was brought under notice. Mr. Field formally announced that the Government had taken away fixed payments to the amount of 105*l.* per annum, and had given them payments depending upon examination, which would probably bring them in about 12*l.* 10s., leaving something like 95*l.* short. The result must be that unless the citizens were prepared to make up that deficiency, the corporation must stop their School of Art. At present, he was not prepared with any motion on the subject, because the committee had first to ascertain from the managers of the charity schools whether they were prepared to have their children taught for a payment of 5*l.* per school: if they did that, the School of Art might be able to struggle on, but the committee had reason to believe that the charity schools could not afford to pay that sum. He merely mentioned this subject to the council for the sake of getting their case put before the public. Probably they could not keep up the charity schools: they must, therefore, centralize themselves, and try to keep up a school for the adult artisan classes. The principle upon which the Department was making allowances to the country, it seemed to him, was so devised as to keep all the money for South Kensington, in order to avoid the necessity of their going to Government for more money. The mayor recommended that proper notice should be given, so that the whole matter might be brought before the corporation in a regular manner.

The Sheffield School.—Owing to ill health, the well-known and able head-master of this school, Mr. Young Mitchell, has been obliged to resign. His successor is Mr. Sounes, the master of modelling at the Birmingham School.

The Sunderland School.—This school, which came into existence about two years ago, has ceased to exist.

The Glasgow School.—From a summary of the official returns connected with this school, it appears that the school is in a satisfactory state; but the withdrawal of the Government grant seems to be exciting misgivings as to the result.

The Dublin School.—Mr. Macmanus is retiring from his labours in the School of Art of the Royal Dublin Society; and some of his pupils propose to present him with a testimonial, to consist of a silver palette and a sum of money.

PROVINCIAL NEWS.

Brighton.—The town council is turning its attention to the conversion of the Riding-school of the Pavilion into a public hall or assembly-room. At its last meeting it empowered the Pavilion committee to prepare plans for this purpose, and for some further appropriation of the northern part of the Pavilion estate. These plans will shortly be submitted to the council for its approval.

Cheltenham.—The water supply of Cheltenham is to be improved. Mr. Horsley, we understand, has been inspecting a spring on land in the neighbourhood of Cirencester. The supply is spoken of as practically inexhaustible, the yield being estimated at 800,000 gallons per diem; and the quality by analysis good, there being only 17 grains of solid matter to the gallon of water. The objection to this source of supply would be the distance (sixteen miles) from Cheltenham, and the consequent expense of storage and piping.

Bath.—The first section of the new provision markets has been opened to the public. The principal feature of the design is a wide avenue, intended eventually to lead from the corner of Bridge-street to the end of the present fish-market; intersected by another main avenue, leading from the entrance near the police station in High-street to New Market-row. At the intersection of these two avenues is placed a dome, 40 feet in span, rising 50 feet to the lanthorn. Ranged round this dome are several small shops, for the sale of fruit, &c. The butchers' market forms a ring round the dome, which is a figure of twelve sides. The main entrance from High-street is intended for the sale of vegetables, a range of shops similar to those in the dome being placed on both sides of such entrance. The fish market and the principal vegetable market yet remain to be constructed, but will be completed and opened to the public in the course of the next two months. Iron has been largely introduced in the construction of the roofs, which are of a light and ornamental character. The whole of the butchers' stalls are lined with Parian cement. Over the butter market a new roof, corresponding with the rest of the design, has been placed.

Bristol.—A large block of warehouses to the west side of Saint John's-gateway is, we hear, about to be pulled down, in order that a spacious structure may be raised for business purposes. The present premises stand on the site of the old warehouses burned towards the close of the last century by the notorious incendiary, "Jack the Painter," who was afterwards hanged, we believe, at Portsmouth, for an attempt to set fire to the royal dockyard. A head carved in freestone, and which is fixed on the north front of the present warehouses, facing Quay-street, has been long pointed out by tradition as "the head of Jack the Painter," being popularly supposed to be a carved likeness of the incendiary. For this relic, which will have to be removed when the walls are being rebuilt, it is said a local collector has offered the contractor a handsome sum of money; but the head in question is supposed by well-informed Bristol antiquaries to be a portion of a corbel from the old church of St. Lawrence, which is recorded to have stood on this spot, using jointly, with St. John the Baptist's Church, the tower that stood between the two sacred edifices.

CHURCH-BUILDING NEWS.

Cold Hanworth (Lincolnshire).—A new church has been erected here to the memory of the late Col. Cracroft, and has just been opened. The edifice is dedicated to All Saints, and has been built at the sole expense of Commodore P. Cracroft, C.B., and his wife. It consists of nave, chancel, vestry, tower, and spire. The style is Decorated, and is treated very freely. The walling is rough-faced, from the Hackthorn quarry. The exterior and interior dressings are of Ancaster stone, except the reredos and font, which are partly of Caen stone, and red Mansfield, with green polished marble shafts. The interior of the church is partly of red brick and partly plastered. The whole of the roofs are of Memel timber, stained and varnished, the covering being of Broseley brindled tiles, with a crested ridge. The height of the tower and spire is about 60 feet, and the top of the spire terminates with a weather vane. The whole of the benches (which are open) are of deal, stained and varnished. The pulpit, reading-desk, communion-rail, and font top are of oak. The terminations, capitals, springers, &c., are carved, both interiorly and exteriorly. The windows are glazed in cathedral glass, the tracery in geometrical patterns. The east and west windows, it is intended, will be removed soon, and painted windows put in their places. The nave and porch floors are paved with Minton's plain red, buff, and black 6-inch tiles. The chancel, sanctuary, and baptistery (which is formed under the tower) are paved with encaustic tiles. The church is seated to accommodate about eighty, enough for the whole parish. The churchyard, on the west, south, and north, is enclosed with a low wall of the same materials as the church, with Ancaster stone piers at intervals forming it into bays. The coping is surmounted with a round wrought-iron rail and cast-iron standards. A lych gate is placed at the west entrance, the roof and gates of which are of oak, and cover a space of about 12 feet square. The roof of the gateway is covered with the same kind of tiles and ridge as the church. The architect was Mr. J. Croft, of London; and the builder, Mr. W. Huddleston, sheriff of the city of Lincoln. The cost will be upwards of 2,000*l.*

Antingham (Norfolk).—The church of Antingham St. Mary, near North Walsham, has been re-opened for divine service after having undergone a repair and internal restoration. In all, a sum of 432*l.* has been expended upon the present alterations and improvements, and the work has been carried out by Mr. R. Cornish, of North Walsham, builder, who has recently restored the neighbouring churches of Buxton, Bradfield, Swafield, Trunch, North Walsham, and Scottow. With the removal of the gallery at Antingham Church a tower arch was opened to view; and when many successive coats of plaster were taken from the walls, the staircase to the rood loft, a piscina on the south side of the chancel, and a second, somewhat unusually placed beneath the rood loft, were discovered. The whole of the old internal fittings have been swept away, and low oak benches substituted in their place. Black and red tiles have taken the place of the former uneven brick flooring, and the central alley is paved with the monumental slabs belonging to the church. The sanctuary is reached by three stone steps, and some encaustic tiling imparts a glow to the east end. The altar cloth (furnished, together with the hangings, &c., by Mr. French, of Bolton), is of rich crimson cloth, with the sacred monogram embroidered in gold silk, placed on a stone footing. A new cast window of four lights has replaced an insertion of the basest type.

Bury.—The Roof Committee of St. James's Church have determined to have the pillars and arches of the church scraped, and the walls stuccoed, at an expense of about 200*l.* The west end portion of the roof is completed, and the remainder, it is expected, will soon be commenced; but the committee have resolved to wait the arrival of slates from North Wales before beginning it, rather than permit the inconvenience of the roof again remaining for a time not covered in.

Shireoaks (Newark).—At the new church Shireoaks, recently erected by the Duke of New

astle, a peal of five bells has just been hung. hey were cast by Messrs. Taylor & Co., of Loughorough. It is expected that the church will be pened about the middle of October.

Tenterden.—The new church dedicated to St. Michael, at Bore's Isle, Tenterden, which place ontains about 600 inhabitants, has been consecrated by the Archbishop of Canterbury. The rection of the edifice was commenced exactly welve months ago, the architect being Mr. Hill, London. It stands on an elevation overlooking ie high road, and has a plain appearance. The urch consists of a chancel, 25 feet long and 17 et wide, with a nave of 53½ feet by 22 feet; and as a south aisle opening to the nave by an arcade three arches: at the east end of the aisle ands the tower, which remains to be completed funds permit. A vestry is attached to the north de of the chancel. There are 276 sittings, mostly ee. The style is based upon models of the early rt of the thirteenth century. At the east end the chancel there is a three-light window with eometrical tracery, filled in with stained glass by r. Hughes, of London, and which is the gift of rs. Eyres, in memory of her late husband, Capt. yres, R.N. In the south aisle there are five loured windows, the gifts of various individuals. ie contractor for the building was Mr. Bourne, Woodchurch; the execution of the mason's ork being entrusted to Mr. A. Smith, of Rye.

STAINED GLASS.

St. John's Church, Eton.—In the early part of t year an enrichment of this church was effected the filling of the rose window at the east end the south chancel aisle with jewelled glass, ving for its design the "Cross," surrounded by oring angels, and having at its terminations e emblems of the four Evangelists. Messrs. Connor, of London, were the artists who executed ; and its success led to a scheme proposed by one the officiating clergymen, the Rev. J. W. Roper, ving for its object the possibility of eventually ing the church with painted glass, as a series. is work has just been inaugurated by the erecn of the first two windows, counting from the st end, in the south aisle. The stone-work of e windows is of the Geometric period, and conls of three lights and a tracery. The church ng dedicated to St. John the Evangelist, the ole of the subjects refer to our Lord's life, pecially in connexion with St. John. The sysn adopted is that of a glowing grisaille, banded ch a subject in the centre ope of each window, d in the side opes a panel bearing a badge or blem. The grisaille is composed of natural ms of foliage, broken throughout with colour, d the whole is surrounded with a border. The t subject is the calling of St. John with the ner apostles, and on a scroll beneath the legend 'hey followed him." This is a memorial win-w. The subject of the second window is our rd sending forth the Apostles, with the legend neath "And he surnamed them Boanerges." e fixing of the windows was intrusted to Mr. Harrison, surveyor, of the College.

Newbury Church (Berks).—A two-light window, signed and executed by Mr. F. Preedy, has n recently erected in Newbury Church. The ject is the Annunciation.

St. Michael's, Farndish.—A chancel window of ined glass has been recently placed in this urch. The principal subject in the centre ining is that of our Lord upon the cross, at foot of which are Mary, the wife of Cleophas, ry Magdalene, and one of the Apostles. The side compartments are occupied by figures resenting the Mother of our Lord, several of Apostles, and the Roman Centurion. The ject is completed by a distant view of the city Jerusalem. The smaller upper divisions of the dow are filled with figures of the Four angelists, and its apex contains the emblem of Holy Spirit in the form of a dove. The work executed by Mr. C. Gibbs, of London; and he gift of the churchwarden, Mr. W. H. S. cock, of Farndish. The ancient fabric of Farn- church was internally restored throughout e years ago by Mr. Adcock, mainly at his own

Bardwell Church, Suffolk.—A very satisfactory morial painted window for the east end of rdwell Church, Suffolk, has been completed by ssrs. M. & A. O'Connor, for Mrs. Hutchings.

Shepherdswell Church, near Dover.—Stained s has been placed in the five windows of the e of the new church in the village of Shepherdswell. The centre window is occupied by ll-length figure of the Saviour in the Ascension. In the four side-windows are represented full-length figures of the Evangelists. The whole are surmounted by rich canopies. The glass was executed by the Messrs. Pilkington, of St. Helen's, and has been fixed by Mr. A. Goslett, of Soho-square. The cartoons are by H. Casolani, of London.

BUILDERS' BENEVOLENT INSTITUTION.

WE have pleasure in drawing attention to the announcement that the next annual dinner of this valuable institution will take place on the 29th of October next, at the London Tavern. The treasurer, Mr. Plucknett, will receive the name of any gentleman willing to act as steward, or to attend the dinner. It promises to be a good meeting. Mr. Alderman and Sheriff J. Lawrence, who is to preside, is an excellent chairman, and will, we have no doubt, carry it through well.

His elder brother, by the way, Mr. Alderman William Lawrence, will doubtless be the next Lord Mayor of London. It is a remarkable thing to find two brothers following their father as aldermen and sheriffs of London, and one of them, while still a young man, about to take upon himself the duties and honours of chief magistrate. When this does occur, it is to be hoped he will be better advised than the present Lord Mayor (Rose) seems to have been, whose mayoralty, looked at from out of doors, is unmarked by any noticeable acts except mistakes.

THE DEVONSHIRE ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE, LITERATURE, AND ART.

THIS association, which has not long been established, held its second annual meeting at Plymouth, commencing on Wednesday, the 29th ultimo. The inaugural meeting took place at the Athenæum in the evening, when Sir John Bowring, the retiring president, took the chair. Mr. Spence Bate delivered the inaugural address, in which he discussed various scientific and literary subjects; incidentally stating that Bishop Colenso was a native of Cornwall, and was educated at Devonport. In allusion to the freedom of thought evinced in modern times, Mr. Bate remarked that perhaps in no period of the world's history had there been an equal amount of daring research to that which has characterised the present age; and here might be seen the great advantage that the modern inductive philosophy had had in all recent inquiries. The promulgation of an error had never yet done harm to mankind if its discussion were not prevented: the great enemy of truth is apathy. A false theory will soon in the atmosphere of free inquiry have all the deceptive buttresses which give it support speedily knocked away, and the skeleton alone would be apparent in its hideous nakedness. In literature, no less than in science and art, had intellectual progress shown an attempt at independent inquiry. It was for the benefit of free inquiry, for the advantage of liberal and enlightened discussion, that men of intelligence agreed to band themselves into a society such as that—not as a field for labour, but to form an arena in which the results of labour and industrious thoughts are made manifest.

On Thursday the proceedings were resumed at the Athenæum. Mr. Bate took the chair; and Mr. W. Pengelly, F.R.S., read a paper "On the Chronological Value of the Red Sandstones and Conglomerates of Devonshire." Mr. E. Vivian, of Torquay, gave two addresses;—the first on the Devonshire caverns; and the second on the principle and use of his self-registering hygrometers, by one of which the extreme difference between temperature and dew-point, and by the other the mean, could be registered. The Rev. J. E. Risk, M.A. followed with a paper, entitled "Some Remarks, on recent Controversies respecting the Antiquity of the Human Race." He founded his objections principally upon the differences of opinion between the English and French geologists in regard to the Abbeville jaw. Mr. Pengelly explained that this difference did not affect their entire unanimity upon the general conclusions. Some remarks upon recent additions to the Fauna of Devon were then made by Mr. J. B. Rowe, F.L.S.; and Mr. E. Appleton, F.I.B.A., of Torquay, read a paper on "Our Homes," pointing out the means by which they might be improved. He drew particular attention to the advantages to be derived from hollow walls, for the purpose of securing warmth and dryness, and also of a hollow system of foundations, for the prevention of the rising of damp from the earth. Other papers were read; and Mr. J. N. Hearder, of Plymouth, gave some practical observations on imperfections in the mode of fitting lightning-conductors. Dr. Scott read a paper "On the Deaf and Dumb." A *conversazione* took place in the evening, which was well attended.

On Friday an excursion was made up the river Tamar, the members lunching at Pentillie. Cotehele was next visited, where Mr. E. Appleton elucidated the architecture, some of which dates back to the end of the fifteenth and beginning of the sixteenth centuries, having been erected by Sir Richard Edgcumbe in the reign of Henry VII. The dining-hall has an open roof of good design and workmanship. Parts of the building belong to the time of Henry VIII. and Elizabeth. There are also some good tapestry and furniture of the same date, besides a small collection of armour and weapons. The domestic chapel adjoins the hall, and contains some sixteenth-century woodwork, and a few fragments of stained glass. A small votive chapel, erected close to the river, still exists, in which some well-executed fifteenth-century bench ends, now used as a wall lining, are to be seen: there are also a few portions of carved work, which appear to be Spanish. The Morwell Rocks were next examined, under the guidance of Mr. W. Pengelly, of Torquay.

SOCIAL SCIENCE IN EDINBURGH.

PUBLIC HEALTH DEPARTMENT.

AMONG the papers sent in to be read in this department, at the meeting which commences on the 7th October, the following are of special interest:—"The Sanitary Statistics of Colonial Native Schools and Hospitals;" and another paper on the "Army in India," by Miss Florence Nightingale; "The Changes which have occurred in the Type of Disease in Edinburgh during the last Fifty Years," by Professor Christison; "Diseases in Cattle," by Professor Gamgee; "The Sanitary Arrangements of Edinburgh, as compared with other large Towns," by Dr. Littlejohn; "On the Necessity for Prospective Legislation to prevent Dwelling-houses being built in disregard of the Conditions of Health," by Colonel Oldfield. Various other important subjects will be brought forward, as the sickness and mortality of merchant seamen; the contamination of water by sewage and by public works, &c. We hope many of our readers will be present.

THE RAISING OF HOLBORN VALLEY.

THE Court of Common Council of the City of London have unanimously agreed to their Improvement Committee's report on this subject, wherein they recommend that they should be authorized by the court to advertise for designs, plans, and estimates for raising Holborn valley, and to offer premiums of 250*l.* and 150*l.* respectively, for the two most approved designs.

SHILBOTELL VICARAGE, NORTHUMBERLAND.

THE Early English "turris de Schilbotell," now incorporated with the vicarage-house at Shilbotell, is in course of restoration. This ancient fabric is one of the earliest peles in Northumberland. It is a quadrangular tower, built on the scalp of a rock, cropping out of the surface on high ground; and is formed of large stones placed in even courses. The lowest course rests on the surface of the rock without foundations. The walls are 4 feet thick. The site adjoins the churchyard, and is within a short stone's-throw of the little Norman church. Before the present restorations, the tower had been reduced to two stories in height, the window-opening enlarged to receive modern sashes, and covered with a red pantile roof. Two sides of the tower had been built up, one by a granary, and the other by a small cottage, which, with stables and a washhouse, formed the extent of the vicarage-house.

There is occasional mention of Shilbotell in old writings. William de Vescy held Schipplingbothill in the *Testa de Nevill.* John de Vescy held Shepelbodel in the reign of Edward I. In 1367, Henricus de Percy appears as the owner of Shillingbotle Villa. A further and still more curious rendering of the word occurs in the *Taxacio civitatis et diocesis episcopatus Dunelmensis* (1291), when the rector of "Schiplinbotel (Schiplebodil)" was taxed at 12*l.* 2*s.*, and vicar *ejusdem* 5*l.* In the calender of the *Inquisitiones post Mortem*, or escheats commencing with the early part of the reign of Henry III. the name

is written Shiplingbotill. A MS. list of the peles and castles of Northumberland, *circa* 1460, mentions that the Turris de Schilbotell is in the occupation of the Duke of Bedford, who also held Prudhoe Castle, in the same county, at that time.

The vicar of Shilbotell, now incorrectly written Shilbottle, the Rev. J. B. Roberts, M.A., finding the limited accommodation of the vicarage-house very inadequate and inconvenient, resolved to enlarge it, and, acting upon the advice of his architect, Mr. F. R. Wilson, to make a restoration of the venerable tower the principal feature of the scheme. A new dining-room, with drawing-room above it, are disposed on the site of the granary, which the commutation of tithes had left in disuse and decay for many years. These rooms are lighted by triplets in accordance with the character of the tower. The removal of the granary exposed one side of the turris that had long been hid by it: on the basement story was a plain narrow loophole, as a splayed opening in the groined chamber within had suggested. The external aperture had been filled in. On the upper story there were traces of two doorways of different dates, both of which had been built up in previous alterations. The new works also comprise a new kitchen, offices, and cellar (the latter being blasted out of the rock), with the addition of bed-chambers above stairs. The tower is now under the masons' hands, receiving an additional story, with a staircase turret leading to the leads above, from which a wide range of country will be placed under observation. The oblong carpenters'-sashes will be removed, and the window openings restored to their original forms. The windows of the principal chambers command fine sea views beyond the church, the grey and red roofed colliery village and sloping country. The Ecclesiastical Commissioners have made a grant of 200*l.* towards the cost of this restoration. The contractors are Mr. Hudspeth, Alnwick, mason; Mr. Forster, Alnwick, joiner; and Mr. Dixon, Leamington-bank, Alnwick, slater.

The following inscription, cut in Early English capitals, will be inserted in one of the faces of the tower:—

"Hæc
Imminuta
Turris de Schilbotel
Primitus in speculum redificata
Temp. Hen. III
Victoria Regnante
Instaurata fuit
MDCCCLXIII.
Joanne B. Roberts, M.A., Cantab,
Sacerdote Vicario.
Frederico R. Wilson, Soc. R.B.I.,
Architecto.

H. Hudspeth, Lapicida.
T. Forster, Fab. Lign.

Earth builds on earth, castles and towers;
Earth says to the earth, All shall be ours!"

EXHIBITION OF STAINED GLASS.

THE proposed exhibition of stained glass is getting into shape. The Science and Art Department invited leading firms engaged in the production of stained glass to meet at South Kensington, and explain to their representatives the nature of the plan and its means of carrying it out. The Department proposes to hold the exhibition in the gallery in the west wing of the South Kensington Museum, which contains fifteen windows, each 11 feet high by 4 feet 9 inches wide, and could, if necessary, apply the windows of a gallery adjoining that in question to the same purpose. The manufacturers present accepted the offer. Messrs. T. Gambier Parry and R. Burchett were appointed an executive committee on behalf of the exhibitors, to conduct the necessary arrangements in concert with the Department. The following are the names of firms represented at the meeting:—Messrs. T. Baillie & Co., H. M. Barnett, Chance, Brothers, & Co., Clayton & Bell, Cox & Son, Evans, Field, & Allan, J. A. Forrest, C. Gibbs, Hardman & Co., Lavers & Barraud, Morris, Marshall, Faulkner & Co., O'Conner, J. Powell & Sons, F. Preedy, Pilkingtons, Ward & Hughes, J. P. Warrington, W. Warrington, &c. Mr. Wallis acts as Secretary.

WHO BUILT OUR CATHEDRALS?

THE writer of a paper printed in the *Builder*, p. 669, makes the statement, that *Freemasonry in its Mediæval system* differed from *the form it has existed in since its revival at the beginning of the seventeenth century*. It is very desirable to know where the writer of that passage has found any statement dating previously to 1600, and showing what that system really was: if he has no better authority than the usual dictionary articles, one error would be the assumption that any one has any knowledge of what was Mediæval Freemasonry in England (and it must be noticed that the whole passage to which reference is here made treats solely of England,—not of Scotland nor of Ireland, and not of France nor of Germany). It would also be very useful to know where that writer found any evidence that *Freemasonry revived at the beginning of the seventeenth century in a different form*. If he refer to the usual dictionary articles, or to the absurd histories that have been manufactured since 1725, he will find that Ashmole's date (1646) is paraded as a proof that the Mediæval system was then still in existence unchanged; so that, unless he has alighted upon some document, a second error would be the statement, that Mediæval Freemasonry was revived about 1600–1625; and a third error would be the inference that it ever was revived. The fourth fault seems to be the statement, that we know that from a very early date (by the way, what period is indicated by that expression? Is it the time at which the King of Bohemia built his "seven castles?") there was an *organized fraternity of masons—constituting an order partly religious and partly professional*. No notice of anything of the nature indicated appears in any of the histories of Orders, civil, military, or religious, which have reached my hands; and perhaps, by *order* he does not mean Order, but merely Society. Of course, it is only proper to give him credit for knowing that the masons of London were (or are said to have been) incorporated about 1410, by the name and title of the Freemasons, and for being aware that statutes were directed, 1360-1425 against alliances and covines of masons and carpenters. But the London fraternity or guild will not serve his purpose in any explanation of what is above italicised; nor would such knowledge show the existence at a very early date of an organised fraternity (partly religious) of masons, *who, from travelling and observation, as well as practice, gained intelligence*. These last words are so decided, that it would be well to know, where any proof has been found, that the body of Mediæval freemasons, or rather masons, in England and in France, travelled at all. My own researches tend to a totally different conclusion, which would count the "travelling" as a fifth error. The sixth fault seems to be the assertion that *we know that these masons, by well-devised plans, communicated their intelligence to their whole body*. If, by "plans," the writer means "designs," he is understandable; but, if he means "system of communication," it would be useful to know what these plans were, or where any ground except imagination exists for them. The seventh error seems to be conveyed in the assertion that *the organization was fostered by the clergy*. No proof of that has yet occurred to me. The eighth fault is the assertion that *the rearing of religious structures was allowed to be monopolised by the Freemasons* as an organised body. No safe evidence on that point has been yet adduced in its favour by the most fervently zealous members of the craft. But, if they cannot find any proof that *it is a fact that ecclesiastics were associated* to the Mediæval body; or, that *priests possessing a taste for it were not only associated in Freemasonry, but readily initiated*, they will thank me for thus asking for the long-desired evidence which would show that those words do not convey a ninth error. Probably you will think that nine such faults justify merciless criticism; but please to observe that if there is little excuse for any one of them, there would certainly be less for the inferences with which the lecturer has followed them. As no documentary evidence that *the organization was very complete, and under a central control*, has ever been published, it is open to me to urge that no sound archæologist could hope to establish so much on the faith of *curious correspondence in the details of work*, or *from a universal similarity of arrangement*. No doubt exists in my mind upon the anxiety of the *Builder* to forward any mode of ascertaining who built our cathedrals: so I take this opportunity of beseeching that journal to remove one great obstacle, viz., the usual nonsense about Freemasonry.

It is a pity that the columns of the *Builder* should have been allowed to disseminate such ideas as that a bishop of Noyon (at column 3, line 52, St. Eloi, 640—659 is meant), owed his episcopal dignity to his skill as a goldsmith; and as that it would be a problem to find a Mediæval architect employed on different works. Has Mr. Wing never heard of Colchester? or of Farleigh? to say nothing of Winford? He surely cannot be a diligent peruser of the *Builder*.

WHO IS HE?

*** This subject may be very usefully discussed; but it may be done without acerbity.

THE BURNING OF LIME.

WILL you allow me to suggest the burning of lime by the same method as iron, viz., by hot blast?

It is a well-known fact that, after long experience, lime-burners cannot tell exactly the proper time that lime should be burnt. It is also as well known that lime either over or under-burnt is little better than useless. Such, then, being the case, I think that if the hot-blast system could be applied on a somewhat large scale, it would not only save great expense and time, but the lime also would be much better burnt. R. J.

SHOREDITCH WORKHOUSE.

ARCHITECTS AND BUILDERS.

SIR,—In reference to a paragraph which appeared in your journal of the 19th inst., permit me to say that some error has arisen; and my words, which I cannot exactly remember, must have been misunderstood.

I certainly have no "grounds" for any such assertion, and should be very sorry to cast any discredit on the profession; for I feel convinced that every respectable member of it would act as I have always done, and would neither filch the trade profit from the builder, nor place himself in the hands of sub-contractors for the sake of a trifling commission. WILLIAM LEE.

*** The statement of Mr. Lee's words was publicly made at the meeting of the Board of Guardians, and with such circumstantiality as to render it difficult to attribute misconception. We are glad, nevertheless, to receive the disavowal.

HOLBORN VALLEY.

MY attention has been called to a paragraph in several of the daily and weekly papers, copied from the *City Press*, in which, after referring to the two plans now before the public, by which the evils of Holborn-hill and Skinner-street may be mitigated, if not altogether removed, it properly assigns to Mr. J. B. Bunning, the City architect, the authorship of one scheme; but with regard to the other it states—"This plan was advocated, *though not originated*, by Mr. Marrable, the late architect of the Metropolitan Board of Works, and it would be cheaper." The paragraph does not state who was the *originator* of the design; and until I read the paragraph I had found, thought, that whatever might be the merits of the scheme, I was the author of it. Before I put it forward at all, or laid it before the Board of Works, so long ago as 1859, I took every possible means to discover whether any plan, taking the same line and possessing the same features and advantages, had ever been devised before. I consulted several eminent engineers and architects, among the rest, Mr. Bunning,—and I was assured by all that the plan was at least *original*.

The drawings hung for many weeks in the library and reading-room at the Guildhall. I exhibited them and explained the advantages of the scheme at a general meeting of the Royal Institute of British Architects, when a discussion took place, and the merits and demerits were canvassed. The drawings were also exhibited at a *soirée* of the President of the Institution of Civil Engineers in 1859; and further, two views, looking east and west, of the proposed high level road and viaduct, were exhibited at the Royal Academy, in 1861; and a large and full article, explaining and going into the merits of the scheme, appeared in the *Illustrated London News*, of June 29th, 1861, with a full-page engraving of one of my views. Thus the design has been before the public and the profession for five years, and has as the first time have ever heard its originality impeached. But as the question of doing something to improve the state of the hills on either side of the Holborn valley is seriously under consideration by the City authorities, the public given by many of the leading journals to the statement is calculated to do me much injury; and I shall be greatly obliged by your insertion of this communication statement; as I never saw or heard of any other scheme that proposed to treat the difficulties to be overcome in the same manner that I do.

FREDERICK MARRABLE.

CARLISLE BRIDGE COMPETITION.

SIR,—Sometimes I go to Ireland. The last time I was there I made very particular inquiries as to the Carlisle Bridge Competition, and the knowing gentlemen whom I laughed at me. It appears to be the hobby of a certain alderman of Dublin, and that only. There is not a penny applicable for such a purpose, so far as I could discover. The town will give no funds, and no one in Dublin ever had an idea the affair could be carried out. I asked them,—"How could you be so dishonourable as to advertise, and cause so many gentlemen to spend large sums of money?" The answer was, "Oh, sure we thought the Government would help us." "But will they help you for a bridge in Dublin any more than one in any other town?" "Now doesn't Ireland pay 60,000*l.* more in taxes to England? and isn't it fair they should build a new bridge?" Here is the beginning and end of the Irish affair; and some sixty or seventy gentlemen have been made fools of. The best thing would be to get the drawings back and pocket the affront; or to club together and commence an action against those who issued the advertisement, and caused them to expend their time and money. If common law would not do, Chancery would compel something to be done. AN ENGINEER.

PROPOSED MEMORIAL OF IZAAC WALTON.

I HAVE much pleasure in informing your readers that the Stafford people have determined to erect a memorial to "good old Izaak Walton," who was born here, and whose fame is great. His name is dear to every lover of "the angle" throughout the length and breadth of our island. The town council has taken this project in hand, and shortly an appeal will be made by it to the sportsmen of England, when I have no doubt enough money

forthcoming to enable the council to do full justice to the claims that Walton has to the gratitude and affection of his fellow countrymen.

Who has not been instructed and delighted when he has perused the pages of that ever charming book, "The Complete Angler," which is even now, after the lapse of two centuries, read with as much avidity and zest as when first it appeared in type? I have often thought that it was a reproach to the Stafford people that they should have allowed all those years to roll by and not have raised a memorial, however humble it might have been, to the memory of their highly-gifted townsman and *benefactor*. But it reminds us that "a prophet has no honour in his own country." Since the good old man went down to his grave full of years and surrounded by true and loving friends, nearly 16,000*l.* of money arising out of his charity has been distributed among the poor of this borough, and it is hoped that it will continue to be dispensed among them for ever. Hence I am glad that the town council has determined to erect a memorial which shall be worthy of the man and an honour to the town.

JOHN SHALLCROSS.

COMPENSATION CASES.

Metropolitan Railway.—At the Lord Mayor's Court, Sept. 19th, Mr. Duffield, coach-builder and harness-maker, of Long-lane, Smithfield, and Aldersgate-street, whose repository is about to be removed to make way for the Smithfield extension of the Metropolitan Railway, claimed the sum of 13,000*l.* as compensation for the leases, removal, depreciation of stock, loss of trade, and the consequent injury that would accrue to his business. Some twenty witnesses were examined on his behalf, and a large number on the other side. The evidence, which was of a very conflicting character, occupied nearly the whole day. Ultimately the jury gave their award as follows:—2,500*l.* in respect of the leases, 200*l.* for the fixtures, 100*l.* for removal, 900*l.* for depreciation of stock, and 1,200*l.* for loss of trade, making a total compensation of 4,900*l.*, or 8,100*l.* less than the total amount claimed.

London, Chatham, and Dover.—The action, Knapp *v.* The London, Chatham, and Dover Railway Company, in the Court of Exchequer, was for compensation from the company for having taken the plaintiff's house, and injuriously affected it by the works of their intended railway, without having made any satisfaction to him for it. The court held that where the occupier of land or houses has not a greater interest therein than as a tenant for a year, or from year to year, and such land has been entered upon or injuriously affected by the promoters of an undertaking within the 8th Vic., c. 18, he can obtain compensation only by the determination of two justices under sect. 121, and is not entitled to have his claim settled by arbitration under sect. 68.

Miscellanea.

THE LATE MR. WILLIAM RANGER.—The Secretary of the Royal Society directs our attention to the fact, that Mr. Ranger was not a fellow of that society, as stated in our recent notice. Mr. Ranger was advertised in the obituary of the *Times* as F.R.S., and that misled us.

THE PUBLIC LIBRARY AT ENNIS.—A rate of one penny in the pound has been struck in Ennis, to fit up the rooms of the public library—or, rather, the structure built for the purpose, but remaining yet unfinished. A library, in fact, is in course of creation in the Freemasons' lodge which has been opened in the town.

THE NEW BOURSE OF BERLIN.—The new Bourse, or Exchange, of Berlin is to be opened on the 28th. The king has been invited to be present at the ceremony. The edifice is situate in Burg Strasse, on the right bank of the Spree. Within the building telegraph-offices are in course of erection, which will bring it into immediate connexion with every capital of Europe.

A NEW ORGAN FOR THE CHURCH OF ST. MARY-LE-STRAND.—The old organ has been taken down from the west gallery, and a new instrument, constructed by Messrs. Hunter & Webb, of York-road, Lambeth, erected north of the communion-table. The organ is built upon the German principle, and consists of two complete manuals and pedal-board. The great organ has the following stops:—Unison open, closed unison, octave, super-octave, dulciana, harmonic plate, duodecimo, sesquialtera (three ranks), and trumpet. The swell stops are thus distributed:—Unison closed, unison open, octave, super-octave, hautboy, and trumpet. Pedal organ—Unison open, C C C, octave, and posaune. The various pipes extend throughout the entire compass of manuals and pedal-board, thus rendering the instrument complete as far as its resources allow.

THE CHURCH OF ST. NICHOLAS AT HAMBURG. This church, which was destroyed during the disastrous fire of 1842, having now been rebuilt from the designs of Mr. Scott, is to be consecrated with ceremony this week.

METROPOLITAN BOARD OF WORKS.—THAMES EMBANKMENT.—On (this) Friday the Metropolitan Board of Works will re-assemble after the recess. At the meeting on that day the tenders for the execution of the embankment works on the northern side of the Thames will be opened and considered.

REMAINS OF LACUSTRINE HUMAN HABITATIONS IN WIGTONSHIRE. — Lord Lovaine has been draining Dowalton Loch, between Wigtown and Fort William, and has found traces of lacustrine habitations in the bed of the loch. Artificial islands appear to have been made by means of stones mixed with fern and other branches, boughs of trees, and other timber rudely worked. Piles have also been found, and many teeth and other bones of animals; a bronze vessel, earthenware articles, a small granite quern, beads, fragments of armlets, and other relics. No distinct remains of dwellings have yet been found, and no tool or weapon of any kind.

HAYMARKET THEATRE.—Mr. Buckstone, in a short "shut up," after a season that has lasted for years, and secured him, we hope, a nice little fortune, has renovated and improved his house before the curtain very considerably. An additional row of stalls has been formed; chairs have been substituted for the confined seats in the dress circle; and the amphitheatre is made more commodious. At the opening night, on Monday last, the revived drama of "Charles XII.," capitally acted by Miss Louise Keeley, Mr. Wigan, Mr. Buckstone, Mr. Compton, and Mr. Walter Gordon; and "The Bengal Tiger," furnishing Mrs. Wigan her best part, formed the staple. "Finesse" will return to the bills next week.

AMALGAMATED SOCIETY OF OPERATIVE PAINTERS.—On Tuesday evening the half-yearly general meeting of the members of this society was held at the King and Queen Tavern, Foley-street, Fitzroy-square. The meeting was presided over by Mr. Bruck, the president of the Amalgamated Society, who having stated that there were now eight lodges in connexion with the society, the secretary read a report of the proceedings in connexion with it for the half-year ending the 24th of August last. From this statement it appeared that during that period the income of the trade fund had amounted to 17*l.* 13s. 8d., and that of the burial gift fund to only 1*l.* 15s. 2d.; while the expenditure in respect of the former had been 7*l.* 10s. 9½d., and in respect of the latter 3*l.*; making a total of income of 19*l.* 8s. 10d., and of expenditure of 10*l.* 10s. 9½d., and leaving a balance in hand of 8*l.* 18s. 0½d.

ASTRONOMICAL ERRORS.—Confession, according to the Roman Catholics, is good for the soul; and we trust Mr. Hinde's soul will be much benefited by the rather humiliative confession which he has at last felt himself compelled to make in that popular medium the *Times*, wherein he has so long flourished as a dictatorial and irreproachable oracle. In a long letter to the editor he demonstrates, or, rather, he goes through the demonstration already given by others, not only that the hitherto assumed distance of the earth from the sun is incorrect, but that a long retinue of errors follows in the wake of this great mistake. The distance between the sun and the earth now appears to be 4,000,000 miles less than astronomers have imagined: therefore (says Mr. Hinde), "I subjoin a few of the numerical changes which will follow upon the substitution of M. Le Verrier's solar parallax (8s. ·95) for that of Professor Encke, on which reliance has so long been placed. The earth's mean distance from the sun becomes 91,328,600 miles, being a reduction of 4,036,000;—the circumference of her orbit 599,194,000 miles, being a diminution of 25,360,000;—her mean hourly velocity 65,460 miles;—the diameter of the sun 850,100 miles, which is smaller by nearly 38,000. The distances, velocities, and dimensions of all the members of the planetary system, of course, require similar corrections, if we wish to express them in miles. In the case of Neptune, the mean distance is diminished by thirty times the amount of correction to that of the earth, or about 122,000,000 miles! The velocity of light is decreased by nearly 8,000 miles per second, and becomes 183,470 if based upon astronomical data alone. These numbers will illustrate the great importance that attaches to a precise knowledge of the sun's parallax in our appreciation of the various distances and dimensions in the solar system."

LOOK TO YOUR COIN DEPOSITS.—The foundation-stone of the Church School at Garnard, Isle of Wight, has been found to have been tampered with. An exaggerated report had got abroad of the number and value of the coins deposited with the stone. Sufficient knowledge, however, was not possessed by the would-be culprit to discover the deposit, as both stone and slate beneath were removed together; and if the treasure had been found, the amount, it is said, was only 1s. 10½d.

THE ATLANTIC TELEGRAPH.—By a communication from the Atlantic Telegraph Company, it appears that the necessary capital for carrying out their enterprise has now been provided; and out of tenders, it is said, submitted by eight different contractors, the directors have selected that of Messrs. Glass, Elliot, & Co., on the unanimous recommendation of the scientific committee, consisting of Captain Galton, R.E., Professors Wheatstone and Thompson, and Messrs. W. Fairbairn and Joseph Whitworth. The contractors have already commenced the manufacture of the cable, which is to be subject to the approval of the scientific committee and the board, and they undertake to lay the line across the Atlantic before the end of next year.

DORSET LUNATIC ASYLUM.—The works are now finished. The original contract was taken by Messrs. Eaton & Habgood; and on their failure, in 1862, the completion was undertaken by Mr. Roberts, of Islington, who has brought them to completion. The site is three miles north of the county town, and the enclosures extend to about four acres, besides which there is ground for farm and garden operations for the more tractable patients. The style of the asylum is Lombardic; and of the chapel, Gothic. Water towers ascend on each side of the chapel, and the wings are partly of two stories above the ground-floor, though the other portions have only one story. The material is principally red brick, with facings of light and black brick, and dark-bluish bands. There is accommodation for 300 patients. Mr. H. E. Kendall, Jun., of London, was the architect.

ANTS.—A correspondent who resides in Guildford-street complains that the neighbourhood is infested with ants, and wishes some other correspondent could suggest how to keep them down, for he despairs of getting altogether rid of them. This is a subject which has more than once been noticed in the *Builder*, and various suggestions have been made; but we cannot call to mind any one special mode of killing such vermin which has been found decidedly effectual. Acids and alkalis have probably been more used than anything else; but it unfortunately happens that if the pests *have* been got entirely rid of in any one effectual way, the *Builder* which suggested the trial is not informed of the result. Failing other means already suggested, or which may now be proposed in our columns, we should recommend a trial of powders of the class of plants called pyrethrum or Persian insect-killers. Keating's insect powder, which is said to be from the same class of plants, and which certainly kills other insects, may be useful in clearing dwellings of ants. Keating's *vermin* killer is another and a poisonous article, but the *insect* killer is said to be only injurious to insects.

RAILWAY STATISTICS.—In 1862, no less than 180,429,071 passengers travelled on the railways of the United Kingdom, besides 56,656 season-ticket holders, who of course all travelled very many times; and also, besides 262,334 horses, 386,864 dogs, 3,094,183 cattle, 7,800,928 sheep, and 1,989,892 pigs. The passengers were more than in 1861 by about 7,000,000. They paid 12,295,273*l.* for their fares. The first-class passengers paid 3,332,380*l.*; the second-class, 4,018,221; the third-class, 4 639,250*l.* The proportion of third-class passengers is still increasing, and second-class rather diminishing. Thirty-five passengers were killed (nine of them owing to their own misconduct or want of caution), and 536 were injured. This is less than half the number who lost their lives in 1861 by railway accidents. So much for the severity of juries, of late, in their assessments of damages against railway companies. The passenger trains travelled 57,542,831 miles, and the goods trains nearly as many more. The passenger traffic supplied 47·76 per cent. of the total receipts of the companies and the goods traffic 52·24 percent. The receipts, from all the traffic amounted to 29,128,558*l.*—— The traffic receipts of railways in the United Kingdom amounted, for the week ending the 5th of September, on 10,882 miles, to 645,314*l.*, and for the corresponding week of last year, on 10,428 miles, to 635,814, showing an increase of 454 miles, and of 9,500*l.* in the receipts.

LAYING THE FOUNDATION STONE OF HARTSHEAD PIKE, ASHTON.—On the occasion of the marriage of the Prince and Princess of Wales, a large bonfire was held on the ancient beacon called Hartshead Pike, near Mossley, and it was then resolved to raise a subscription to re-erect the Pike, in commemoration of the event. About 200*l.* have been raised, and the foundation stone of the new Pike has been laid by Mr. S. D. Lees, Mayor of the Manor, assisted by a large number of members of the Masonic order.

THE PROPOSED MEMORIAL CHURCH AT CONSTANTINOPLE.—Mr. C. H. B. Hambly writes from Constantinople, to draw attention to the fact, that though it is five years since the Turks gave a site for this church, no visible progress has been made towards its completion. There are 1,000 English residents, and 20,000 British sailors annually, but the provision for English worship is wholly inadequate. Mr. Hambly says:—"The Turks believe, as expressed by their national proverb, 'Inglis din siz,' that the English are without religion. I leave your readers to judge whether our delay in this matter is likely to decrease their belief." A private letter fixes the blame where we should be sorry to find it.

DRINKING FOUNTAIN MOVEMENT—A memorial fountain, the gift of Mrs. Little, widow of the late Major Little, for many years barrack-master of the Woolwich Royal Marine Division, is about to be erected, at a cost of 200*l.*, on a site granted by the War Department on Woolwich Common. The fountain will be constructed by Mr. Tongue, of Plumstead, from a design by Mr. E. Gregory, C.E.——The new drinking-fountain at Croydon, the gift of Dr. Westall, is now nearly completed, at the new Public Hall. The design is a simple one.——The first stone of the Isaac Fountain, for Northampton, has been laid by the mayor. Mr. Watkin has undertaken to complete the stonework of the base by the end of this month, and by the end of October Messrs. Barwell will have completed the iron structure. It will then be formally presented to the mayor, as trustee for the local public, by Captain Isaac.

BONELLI'S PRINTING TELEGRAPH.—Messages have now been forwarded and delivered in a distinct Roman type on the Liverpool and Manchester route, where the modern locomotive and railway system was finally established. So says the *Albion*. The first message sent from the Manchester end was addressed to the *Albion* office, with a request to know if it was satisfactory, and the reply was in the affirmative. The advantages of the Bonelli system, says the *Albion*, are rapidity and accuracy, and these are attained through the passage of a rule of type under a comb containing five teeth, each of which is insulated and represents the termination of a line wire. Thus it will be seen that the instrument requires five line wires to work it efficiently, but the same wires are used for the up and down traffic; and as the rules of type pass under the comb, the messages are legibly printed off at the rate of 400 words per minute, with accuracy amounting to certainty. Any errors are corrected before the despatch of the message, and thus the transmission of them is checked at the outset. The system of the promoters of the Bonelli telegraph enables them to make a reduction in the charge of transmitting telegrams.

LIGHT AND ECONOMIC BRIDGES.—Among the mechanical inventions exhibited at the Royal Cornwall Polytechnic Society's rooms, at Falmouth, are the models of the cheap bridges invented by Mr. Angelo Sedley, of London, as to which a series of tests were made upon the day previous to the closing of the International Exhibition. The model was 17 feet 6 inches clear span, and its total weight was 25 lb. The extreme width was 3 inches, and the extreme height 4½ inches; whilst thin veneer and tape, fastened together with glue, were the materials used in its construction. The result showed that the breaking strain of a bridge 1,050 feet span (the scale indicated by the model tested) on Mr. Sedley's system was twenty times its own weight, whereas in the experiments made before the Menai tubes were built, on the small models of the same, the breaking weight for a span only two-fifths of the above was twelve times the weight of the model operated on. A bridge upon this principle is being built for a park at Staplehurst upon a small scale, 40 feet span, and another in Wharfdale of 180 feet span. A wooden foot or bridle road bridge, 50 feet clear span, 4 feet wide, and equal to a load of 20 tons, can be constructed, it is said, for 50*l.*, and that the bridges are delivered at any railway station in London, of 30 feet span and 4 feet wide, in wood, for 30*l.*, and of the same dimensions in iron for 50*l.*

WINDSOR.—Cardinal Wolsey's Chapel is now being restored; and, while erecting some carved stonework last week, it became necessary for the workmen of Messrs. Poole to cut away a portion of the wall on each side of the doorway opening into the cloisters, opposite St. George's Chapel. On removing the masses of stone from the mortar in which they were embedded, sixteen or eighteen of the pieces were discovered, we are told, to have formed (it is supposed) a portion of the chapel erected by Henry III. These relics form portions of the jamb of a doorway with ogee mouldings, pillars, and other parts of an ancient ecclesiastical edifice. On one of the stones is an angel's wing, while the mouldings and surfaces still bear the crimson, green, red, and black colours with which they were decorated in curved and zig-zag lines.

PERFORATED PARIAN.—A parian vase lately manufactured by Messrs. Grainger & Co., of Worcester, is described by the *Worcester Chronicle*. It is in the Classic style, raised on a pedestal, the whole measuring 31 inches in height and about 13 inches in width. The material is of the hue of the purest wax, and is perforated, so that the vase presents a series or course of intersecting patterns in delicate open-work, with masks, scrolls, leaves, and other ornamental embellishments. In works of this nature the article comes from the mould with the design embossed on its outer surface. The depressed portions of this are afterwards dexterously cut away, while the material is in a plastic state, by a tool like a small penknife blade, leaving an elaborate structure of delicate open-work, resembling filagree or lace, but wrought into richer and more complex designs. Great peril attends this work of perforation.

THE ACT FOR THE REGULATION OF BAKEHOUSES.—By this Act, it should be noted, the inside walls and ceiling, or top, of every bakehouse within towns of 5,000 population, and the passages and staircase leading thereto, must be limewashed or painted with oil, or partly the one and partly the other. Where painted, there shall be three coats of paint; and the painting shall be renewed every seven years, and shall be washed with hot water and soap once in every six months. Where limewashed, the limewashing shall be renewed every six months. Every bakehouse, wherever situate, shall be kept in a cleanly state, shall be provided with the proper means of ventilation, and shall be free from effluvia arising from any drain, privy, or other nuisance (sec. 4). In towns, no place on the same level as the bakehouse shall be used as a sleeping-place, unless effectually separated from the bakehouse by a partition extending from floor to ceiling, and unless there be an external glass window at least 9 feet square, of which half at least shall be made to open (sec. 5). The penalties on occupiers, &c., of bakehouses not complying with these regulations are summarily recoverable before justices, and range from 2*l.* to 10*l.* The local authority is required to enforce the Act.

POMPEII.—Discoveries are reported from Pompeii. A house has been uncovered, which, to judge from the splendour of its interior furniture, must have belonged to a wealthy proprietor. The dining-room is paved with mosaic, representing a number of gourmandizers of the time. The completely served table is covered with petrified remnants of dishes; and around it are found three divans, or rather table-beds, of bronze, richly adorned with gold and silver, upon which reposed several skeletons. The new regulations established at Pompeii by the Italian Government greatly enhances the enjoyment of the excursionist, for he has only to pay a moderate entrance-fee, and to push his way through a patent self-registering turnstile, as he might at the Crystal Palace, and he finds himself at liberty to wander from temple to theatre, from palace to *thermæ*, with no pragmatical cicerone to dog his footsteps, and no exacting key-bearer to disturb his archæological researches or his historical reveries in the city of the dead. Whereas it was formerly impossible to find fees enough to satisfy the rapacity of the various hangers-on of Pompeii, it is now impossible to get any of the guardians or *custodi*, who are perfectly civil and obliging in their explanations to any one requiring their assistance, to accept anything more than a cigar, as they are regularly and sufficiently paid by the Government, and forbidden to take fees. For visitors of a class to whom economy is a paramount consideration, Sunday is set apart as a free admission day; and many parties of indigenous sight-seers, to whom Pompeii under the old *régime* would have been a tabooed city, now avail themselves of the privilege thus afforded them to gaze on the habitations of their ancestors.

THE MULREADY MEMORIAL.—The memorial of Mr. Mulready is to consist of a tablet on his tomb at Kensal Green, and to be supplemented by a statue in the National Gallery.

QUARRY ACCIDENT AT CARDIFF.—A fatal accident has occurred at Llandaff stone quarry, about two miles from Cardiff, resulting in the instantaneous death of two men and severe injuries to seven others. The quarry in question is of rather an extensive description, and supplies material for the construction of the Penarth Harbour Dock. The depth being somewhat considerable, an engine is employed to raise the blocks of stone. This engine overhangs the pit of the quarry, and is supported upon two large beams of wood. As the work was proceeding, a more than usually large piece of stone had to be raised. The engine had raised the stone some slight distance when the whole structure—beams, engine, stonework, and ruins—fell down the pits.

DRILLING STONE.—Mr. J. S. French, of Bangor (Maine), has invented a machine by which the common hand drill is worked by one man with three or four times the rapidity and execution obtained by the old sledge-striking operation. The *Maine Whig* says:—"We saw one of his machines (manufactured by Messrs. Hinckley & Egery) at work. By turning the balance-wheel of 2 feet in diameter, which is done with much ease, the drill is struck by a 25 lb. sledge, from sixty to ninety times a minute, and penetrates the hardest granite as fast as four men will do it by the ordinary process. The machine is intended for quartz mining operations, where horizontal tunnels are to be carried into the bowels of the gold-bearing hills, and it can easily be arranged so as to drill in all directions. It appears to be an important labour-saving invention." The use of a somewhat similar contrivance, in the Mont Cenis tunnelling operations, will probably lead to future economy in all descriptions of mining-work in rock.

A NEW MECHANICAL AND PNEUMATIC VENTILATOR.—A correspondent, speaking of a ventilator and gas expeller patented by Signor Giachosa, of Warwick, and of experiments with it witnessed by the writer, says:—"It is perfect in its construction, and in every way capable of improving the ventilation, not only of coal mines, but also with slight modifications, of hospitals, ships of war and private houses. The machinery Signor Giachosa uses is of an inexpensive character, and may be worked either by the action of a spring, manual labour, or by steam power. The model is simple in its arrangements, and very effective in its operation. One part of the apparatus was connected by an elastic tube, 40 feet long, with a large glass vessel filled with smoke; and almost instantly after the machinery was put in motion the smoke began to disappear from the vessel where it was confined. It is calculated that a 6-feet square machine would be capable of expelling 10,000 cubic feet of noxious gas, foul air, or smoke per minute; and, if what are termed the 'collectors' of the carbonic acid gas (or choke damp) are stopped, the power of the collectors for the expelling carburetted hydrogen (or fire damp) would be doubled. Another advantage of Signor Giachosa's patent is, that it not only disturbs the foul air, but at once removes it."

CHURCH ARCHITECTURE IN SCOTLAND.—At the opening of the new Free Church at Crathie, already noticed, Dr. Guthrie said:—"I highly approve of the resolution of our friends that led them to build such a house as this; because there is no greater mistake in the world than to fancy that while God is a God of holiness, a God of power and of justice, He is not also a God of taste. I say that God is a God of taste, just as much as He is a God of anything else that is lovely and good. And how do I prove that? you may ask. I prove that by just asking you to go to the seashore and find out for me a shell that is not pretty. I prove that by asking you to go to those meadows and find out a flower that is not pretty. Let me tell you that the flowers would have produced the kind according to the law although they had never been painted. It is not necessary for the rose and the lily that the one should blush so beautifully red, and the other bloom as white as snow. God has made a useful flower—a useful rose and useful lily—and then painted them. It is as certain that the Bible is true that He is a God of taste, as much as He is possessed of those other attributes. And therefore it is, I say, that I rejoice in the erection of such a building for God's service. Our old stupid notion was—we abhorred Popery so much that we recoiled to the other side—that God was never so well worshipped as in an ugly house. It is a great mistake,—a mistake contrary to the Bible—contrary to reason and common sense."

A CONNECTOR SHIP.—The idea has been revived of having a part of a vessel devoted to the stowing of freight, the part to be at once removable on coming into port, and the motive portion attached to another freight-loaded part, which can be immediately sent off.

VALUE OF LAND IN VENTNOR, ISLE OF WIGHT. A dispute having arisen between Mr. B. Myers and the Pier Company as to the value of the steep bank and small slip of land lying between the road in front of Devonshire-terrace and the sea, consisting altogether of rather over two acres, and which the Pier Company had given notice to the owner that they required for the purposes contemplated in their Act of Parliament, it was made a matter of arbitration before the Under-Sheriff of the county and a jury. From the opening address of the counsel for the claimant, it appeared that the sum in dispute was the difference between 3,450*l.* claimed by Mr. Myers, and 770*l.* offered by the Company. Mr. Newman, of Ryde, architect and surveyor, was of opinion that the amount claimed by Mr. Myers was but a fair and reasonable price. By erecting a sea-wall, steps, &c., at a cost of 1,442*l.* 10*s.*, so as to protect the land from the wash of the sea, and prevent the slipping of the loose parts, the property would readily realise 210*l.* a year ground-rents for building purposes. Mr. Josephs, of London, architect and surveyor, concurred in this view. For the company, Mr. Saunders disputed Mr. Newman's accuracy, and estimated the cost of a sea-wall at 3,500*l.*, and was of opinion the company's offer was sufficient. Other witnesses on both sides were called, and the jury awarded 1,000*l.* to the claimant.

ELECTRO-TELEGRAPHIC.—The *Hawthorne* arrived at the supposed place of the fault in the Malta and Alexandria Cable, about 64 miles from Alexandria, on the 10th of August; and after creeping for five days across the line in which the cable was laid, a fragment of the cable, about half a mile in length, was picked up in 27 fathoms. The creeping was then repeated, and an end raised, which, on testing, was found to be in communication with Benghazi. Four more detached pieces of the cable were picked up, of about half a mile each in length, and on the 17th an end was found that was in perfect communication with Alexandria. A new piece of cable was spliced in, and perfect communication restored throughout the whole line. In the length of 3 miles that was actually picked up there were no less than ten faults, where the cable had been completely severed, evidently for some time. Some 150 sponge-boats were found by the *Hawthorne* at work on the spot, and the inference is that their anchors cut up the cable. The discovery of the fault at almost the exact distance from Alexandria at which it was foretold, reflects great credit on Mr. Saunders, and tends to increase confidence in electricity as a science,—unless, indeed, the sponge-boats suggested the locality.

TENDERS.

For erecting town hall, butchers' market, and corn exchange, at Ruthin. Messrs. Walker & Poundley, architects. Quantities supplied:—

Chester & Co.	£4,236 0 0
Conway	4,150 0 0
Heymore	4,100 0 0
Prichard	3,981 17 6
Owen & Jones	3,905 0 0
Ellis	3,580 0 0
Roberts & Holland	3,558 0 0
Porteus	3,546 0 0
Roberts	3,494 0 0
Neille	3,353 0 0
Evans	3,307 0 0
Williams	3,300 0 0

For alterations and decorations to Reading Town Hall. Mr. W. H. Woodman, borough surveyor:—

Dover	£1,900 0 0
Sawyer	1,745 0 0
Biggs	1,735 0 0
Barnicoat	1,694 0 0
Grover	1,486 0 0
Sheppard (accepted)	1,461 0 0

For additions to house, Queen's-road, Reading. Mr. W. H. Woodman, architect:—

White	£446 0 0
Sheppard	445 0 0
Biggs	430 0 0
Goswell (accepted)	394 0 0

For erecting new premises, in New King-street, Coventgarden, for Messrs. Heaton, Butler, & Bayne. Mr. A. W. Blomfield, architect. Quantities by Mr. J. A. Bunker:—

Turner & Sons	£2,141 0 0
Clemence	2,060 0 0
Simpson	1,999 0 0
Jackson & Shaw	1,995 0 0
l'Anson	1,954 0 0
Browne & Robinson	1,947 0 0
Child & Son	1,869 0 0
Howard	1,797 0 0

For additions to the warehouse of Messrs. Cannock, Tait, & Co., Limerick. Mr. W. Fogerty, architect. Amounts exclusive of plate glass, revolving shutters, and fixtures:—

Scanlon	£1,680 0 0
Ryan & Son	1,589 0 0
Malone & Cavanagh (accepted)	1,570 0 0

For new wing to house at Wargrave, Berks. Mr. W. H. Woodman, architect:—

Simmonds	£586 0 0
Grover	535 0 0
Scott (accepted)	500 0 0

For new wing to Sutherlands, Reading. Mr. W. H. Woodman, architect:—

Bricklayer's Work.

Wheeler (accepted)	£300 0 0

Carpenter's Work.

Simmonds (accepted)	186 0 0

For the erection of a villa residence, at Port Hill, Burslem, Staffordshire, for Mr. B. Cork. Ward, Son, & Ford, architects. Quantities supplied:—

Woolrich	£1,486 0 0
Harley & Dean	1,458 15 0
Watkin	1,443 5 0
Matthews	1,421 0 0
Massey	1,320 0 0

For building three houses, at Northampton, for Mr. Edwards:—

Cosford (accepted)	£1,000 0 0

For six houses, bakery, and stabling, in Peto-street, Plaistow, West Ham, Essex, for Mr. William Stanley Masterman. Mr. John T. Fisher, architect. Quantities supplied by Messrs. Curtis & Son:—

Rivett	£1,887 0 0
Hack & Son	1,759 0 0
Cushing	1,700 0 0
Chapman	1,599 0 0
Sheiton	1,575 0 0
Cerdery	1,545 0 0
Fisher	1,380 0 0

For making a new road, building walls, &c., in connexion with the proposed new cattle-market. Mr. Geo. Tompkins, surveyor:—

Brock	£750 0 0
Beaven & Son	693 0 0
Hartree	585 0 0
Beavent	550 0 0
Summons & Hillman	518 17 0
Durke (accepted)	475 0 0

For a pair of semi-detached villas, Barnet, Herts. Mr. Barron, architect:—

Roberts & Strange	£2,305 0 0
Treharne	1,998 15 0
East	1,898 0 0
Ginger	1,775 0 0

For chapel, Church-street, Deptford, Kent, for the London Diocesan Home Mission. Messrs. Newman & Billing, architects. Quantities supplied:—

		If ornamental brick facing is omitted to sides and back, deduct
Patrick & Son	£4,583 0 0	£83 0 0
Dove, Brothers	4,475 0 0	55 0 0
Jackson & Shaw	4,420 0 0	100 0 0
Downs	4,352 0 0	76 0 0
Axford & Co.	4,280 0 0	40 0 0
Thompson	4,230 0 0	50 0 0
Wells	4,200 0 0	47 0 0
Peake (accepted)	3,667 0 0	25 0 0

In the list of tenders for vestry-hall, St. Mary's, Newington, given in our last, the separate amounts headed "Offices," should have been titled, "*Extra, if in Portland stone.*"

TO CORRESPONDENTS.

H. C.—Dr. D.—W. F.—W. H.—J. G.—S. R.—J. Y.—C. C. (fill in with slips of wood).—H. D. G. (several objections to the plan).—D. M.—E. K. (thanks).—S. T. (thanks).—H. S.—P. R.—C. B. C.—A Young Architect (inquire at the Department). T L., Bristol (next week) —J S. W. (materials came from the architect).—J. S. (did not arrive).

We are compelled to decline pointing out books and giving addresses.

All statements of facts, lists of tenders, &c., must be accompanied by the name and address of the sender; not necessarily for publication.

Advertisements cannot be received for the current week's issue later than **FIVE o'clock, p.m.,** *on Thursday.*

LIFE DEPARTMENT.—Under the provisions of an Act of Parliament, this Company now offers to new Insurers EIGHTY PER CENT. OF THE PROFITS, AT QUINQUENNIAL DIVISIONS, OR A LOW RATE OF PREMIUM without participation of Profits.
Since the establishment of the Company in 1821, the amount of Profits added to the Assured has exceeded in Cash value 669,000l. which represents equivalent Reversionary Bonuses of 1,038,700l.
After the Division of Profits at Christmas 1869, the Life Assurances in force, with existing Bonuses thereon, amounted to upwards of 4,730,000l. the Income from the Life Branch 207,000l. per annum, and the Life Assurance Fund, independent of the Capital, exceeded 1,418,000l.
FIRE DEPARTMENT.—Insurances are effected upon every description of property, at home and abroad, on the most moderate rates.
No expense is incurred in effecting a New Insurance beyond the payment of the Annual Premium and Duty, when the Premium amounts to 5s.
Claims literally and promptly settled.
Notice is hereby given, That Fire Policies which expire at Michaelmas must be renewed within fifteen days at the Office, or with Mr SAMS, No 1, St. James's-street, corner of Pall-mall; or with the Company's Agents throughout the kingdom; otherwise they become void.
Applications for Prospectuses and Agencies to be made to the Secretary.

Insurances against Loss by Fire are effected by the Phœnix Company upon every description of Property, in every part of the world, on the most favourable terms.
The prompt, liberal, and liberality with which its engagements are always met by this Company are well known; and the importance of its relations with the public may be estimated from the fact that since its establishment it has paid more than Eight Millions Sterling in discharge of Claims for Losses by Fire
Insurances with this Company expiring at Michaelmas must be renewed within fifteen days thereafter, or they will become void.
Receipts are now ready at the principal Offices, Lombard street and Charing cross, and with the respective Agents throughout the United Kingdom.

NORWICH UNION FIRE INSURANCE SOCIETY.
NOTICE.—MICHAELMAS RENEWALS.
The business of the Company exceeds 70,000,000l.
The duty paid to Government for the year 1862 was 85,962l. and the amount insured on farming stock 10,088,332l.
A bonus of three-fifths of the profits periodically made to parties insuring, who have thus from time to time received sums amounting in the aggregate to 440,000l.; and the Society now holds a LARGE RESERVE applicable to a future Bonus.
The rates of premium are in no case higher than those charged by the other principal offices making no returns to their insurers.
For prospectuses, apply at the Society's Offices, Surrey-street, Norwich; and 6, Crescent, New Bridge-street, Blackfriars, E.C.

FREEHOLD GROUND RENTS, CITY of LONDON.—The Commissioners of Sewers of the City of London will meet in the Guildhall, of the said City, on TUESDAY, the 13th of OCTOBER next, at HALF-PAST TWELVE o'clock precisely, to receive PROPOSALS for the PURCHASE of FREEHOLD GROUND RENTS, on premises let on building leases, having about eighty years unexpired, and severally situate Nos. 70 and 71, Watling-street, Nos. 75 and 77, Newgate street, and No. 4, Maidenhead-court, Aldersgate-street, particulars and plans of which may be had at this Office, together with the conditions of sale. Tenders must be sealed, endorsed outside, "Tender for Ground Rent," and addressed to the undersigned at this Office, and must be delivered in before TWELVE o'clock, on the said 13th of OCTOBER next. The Commissioners do not bind themselves to accept any Tender, unless the same be deemed eligible. Parties tendering must attend personally, or by an authorized agent, on the day of treaty, and be then prepared (if their Tender be accepted), to pay the required deposit of 10 per cent. and to execute an agreement for the completion of the purchase agreeably to the conditions of sale.
JOSEPH DAW, Principal Clerk.
Sewers Office, Guildhall, September 22, 1863.

TO BE SOLD, TWO SIX-ROOMED HOUSES, and ONE SEVEN-ROOMED HOUSE and SHOP, situate in Culvert-road, Battersea Park.—For particulars apply to Mr. RICHARDSON, 3, Cross street, York-road, Lambeth.

BUILDER'S PREMISES, HACKNEY.—TO BE LET, on Lease, a capital YARD, with spacious Workshops and Office, and with or without dwelling house.—For particulars, apply to Mr. THOMAS BULL, Auctioneer, 60, Cornhill, E.C.

MANUFACTURING PREMISES TO LET, near Stamford street, Blackfriars. They comprise a brick-built two-story factory, a warehouse, engine house and shaft, stabling for six horses, eight roomed dwelling, and large yard, entered by folding doors. For particulars and cards to view, apply to Messrs. DEBENHAM & TEWSON, 80, Cheapside, E.C.

GUILDHALL, London, 23rd September, 1863. The Committee for Letting the Bridge House Estates will meet at Guildhall, on FRIDAY, the 9th OCTOBER next, at ONE o'clock precisely, to receive PROPOSALS for BUILDING LEASES, for Eighty Years, of THREE PIECES of GROUND, on the south-east side of Bermondsey New-road, in the County of Surrey. Also to receive Proposals for a Lease of a Shop at the corner of Wellington-street and the Blackfriars road. Plans of the property may be seen and forms of Tender obtained upon application to the Architect's Office, Guildhall. FERDINAND BRAND, Comptroller.

GROUND in BASINGHALL-STREET, now occupied by Houses and Warehouses, known as Nos 20 and 21, Basinghall street, TO BE LET by TENDER, for Building purposes. A plan of the ground and form of Tender may be obtained at the Offices of EDWARD JANSON, Esq. No. 7a, Lawrence Pountney-hill, Cannon-street; or of Messrs. HOLLINGSWORTH, TYERMAN, & GREEN, No. 24, Gresham-street, London; where Tenders, under seal, are to be delivered on or before the 14th OCTOBER next. The Owner does not bind himself to accept the highest or any Tender.

BUILDERS and OTHERS.—TO LET, in NEW NORTH ROAD, Hoxton, a large PIECE of GROUND suitable for a builder or persons requiring spacious business premises, with conspicuous frontage, and commodious dwelling-house attached.—For particulars apply, Mr. MAYER, 13, President street West, Goswell-street, E.C.

CHISLEHURST, Kent.—TO BE SOLD, about 17 acres of FREEHOLD LAND, being part of the Camden Estate, one mile from Bickley station, on the Mid-Kent line, and a few minutes' walk from the station on the direct South Eastern line from Charing-cross and London Bridge, delightfully situate, well timbered gravelly soil, and well adapted for villas. Also, TO BE LET, on building leases, from 50 acres to 100 acres, at moderate rents.—Apply to Mr DAVENPORT, Estate Agent, 35, Bucklersbury, City, E.C.

TO BRICKMAKERS and OTHERS.—TO BE SOLD, or LET on lease for a term of years, a BRICK-FIELD, in the immediate neighbourhood of an important town in Kent The Land is freehold The demand for bricks is large, and daily increasing, and an unlimited quantity of bricks of first-rate quality can be produced The situation is with a mile of two railway stations For further particulars and terms, address, Z. Z. Z Office of "The Builder."

WANTED, to PURCHASE, for INVESTMENT, a FREEHOLD or COPYHOLD PROPERTY, in or near London, of the annual value of about £50. Address, with full particulars, to F. C. care of Messrs. HAMMOND & NEPHEW, 77, Cheapside, London, E.C.

BATTERSEA. — Between Clapham and Battersea Park.—To BUILDERS and OTHERS.—LONG HEDGE FARM ESTATE TO BE LET on BUILDING LEASES direct from the Freeholders, at moderate ground rents. This property lies on either side of the Queen's-road extension, Battersea to Clapham, and immediately adjoining the Works of the London, Dover, and Chatham Railway Company, and the Wandsworth-road and Station, where houses are in great demand. Roads and sewers now forming. The Low Level Sewer in course of construction will effectually drain the whole of this district. For plans and further particulars apply to Messrs. COVERDALE, LEE, COLLYER-BRISTOW, & WITHERS, Solicitors, 4, Bedford-row, W.C.; to Mr. CHARLES LEE, 20, Golden-square; or to Mr. R. J. WITHERS, 51, Doughty-street, W.C.

WANTED, a PIECE of FREEHOLD or LEASEHOLD LAND, within a mile of the Elephant and Castle, not less than 100 feet frontage, and 120 feet in depth, with back or side entrance. An old mansion or houses not objected to.—Address letters to Mr. S. WALTON, 1, Russell-terrace, Oakley-square.

VICTORIA MARBLE WORKS, 38, LOWER BELGRAVE PLACE, adjoining the Victoria Railway Station, and at Commercial road, Pimlico, London.

OCTAVIUS N. SIMPSON, STAMFORD;
and see Specimens at the Office of
Messrs. PINDER SIMPSON & SONS, 39, Savile-row, London, and at the Museum of Practical Geology, Jermyn-street, W.
This stone (which is a perfect oolite), is raised in blocks of any portable size, and is about four feet thick in the bed. It will stand ANY WEATHER, is much used for water works, and for the building and restoration of churches. When used as ashlar work it is not necessary to place it bed-wise. It works freely with a tooth-saw, and is wrought at a cheaper rate than any stone in the kingdom.

TURNED MARBLE and STONE COLUMNS, TABLES, VASE STANDS, &c. of every description and any size. The Trade supplied with Sawn Marble Slabs, Mortars, Cases, &c at the lowest prices. Every description of Ornamental and Plain Work in Marble or Stone at
W. F. WILLIAMS'S
Marble Works, 316, Euston-road, London, N.W.

Grindstones, Steps, Sills, Coping, Landing, Paving, and all descriptions of Yorkshire Block. Cargoes shipped direct from the Quarries. Prices and specimens forwarded on application.

CAEN and AUBIGNY STONE.
FOUCARD, BROTHERS,
Late P. FOUCARD,
STONE MERCHANTS and QUARRYMEN.
Cargoes shipped to order from Caen to any port. Contracts taken for any quantities.
Office—10, Three Crown-square, Southwark.

TISBURY STONE.
The WARDOUR (CHILMARK) and TISBURY STONE COMPANY, Limited,
Are prepared to execute orders to any extent for their TISBURY STONE.—This is a close, fine-grained Stone, of a beautiful colour, possessing all the qualities of the best Portland, in which range it is placed geologically.
It will supply the long-wanted desideratum of the Architect, Builder, and Sculptor, as the Stone is a first-class Weather Stone, easily worked, and carries a fine arris; and is eminently adapted for carved mouldings, bold architecture, and works of art, requiring only to be known to become
STONE OF THE DAY.
Specimens, Price, &c. may be obtained of
SAMUEL TRICKETT,
General Stone Merchant, Millwall; or at the Offices of the Company, 3, Adelaide-place, London Bridge.

ABERDEEN POLISHED GRANITE WORKS.—Awarded Prize Medal in 1851, Silver Medal in 1855, and Two Prize Medals in 1862.

PAPIER MACHE AND CARTON PIERRE WORKS,

49, RATHBONE PLACE, W.

GEORGE JACKSON AND SONS

(Established in 1760)

Beg the attention of Architects, Builders, Decorators, and the trade in general, to their large assortment of Enrichments for Ceilings and Cornices, in the Gothic, Elizabethan, Italian, Renaissance, Louis XIV XV. XVI. and many other styles; also rich or simple Panel Decorations, Elizabethan and Gothic Dados, Door Caps, Mouldings of all sizes, and to their varied selection of Centre Flowers for Ceilings, Gothic Bosses, Trusses, Columns, and Pilaster Caps, all executed in the highest style of art.

The large and lengthened experience of GEORGE JACKSON and SONS in decorations of Drawing and Dining Rooms, Libraries, &c. for private houses, or public buildings, many of which they have had the honour of executing under Architects of the highest eminence, enables them with confidence to direct notice to that branch of their business.

Upholsterers are invited to inspect the large variety of Glass Frames, Tables, Cornices, Screens, Candelabra, &c. The large extent of their works, and the recent adoption of steam power and machinery, enable them to offer very superior advantages in materials and speed; while for design, quality, relief, and finish, they flatter themselves they stand unrivalled.

BELFAST.
And 23 and 24, BILLITER STREET, LONDON,
PATENTEES AND MANUFACTURERS OF ASPHALTE ROOFING, SHIP SHEATHING, BOILER AND INODOROUS FELTS.

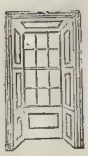
HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.

ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent. Whether sold under the name of "Improved Zinc Paint," or as the number Two or Three qualities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly have any other Paint for their best work

CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.

EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."



THOMAS HUBBUCK & SON,

WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

CONTRACTORS FOR ROOFING THE GREAT EXHIBITION BUILDING OF 1862.

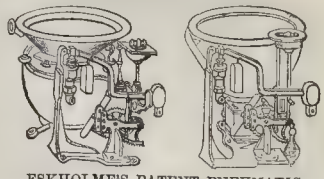
By Her Majesty's Royal Letters Patent.

F. McNEILL & CO. of LAMB'S BUILDINGS, BUNHILL ROW, LONDON,

Manufacturers and ONLY Patentees of

THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.

Patronised by



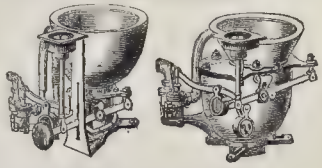
HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSIONERS OF CUSTOMS,
HONOURABLE EAST INDIA COMPANY,
HER MAJESTY'S WAR DEPARTMENT,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK.

And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland, at whose great national shows it has been exhibited, and OBTAINED THE PRIZE, for being the best and cheapest article for roofing; also used for under slates at the Royal Agricultural Society's House in Hanover-square. Its advantages are lightness, warmth, durability, and economy. It is impervious to rain, snow, and frost, and a non-conductor of heat and sound. The Felt can be cut to any length, by 32 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its uses, and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen, and Gentlemen, who have extensively used it, sent free to any part of the town or country. DRY HAIR FELT, for covering Boilers, &c. is also manufactured, by which a saving of about 25 per cent. in fuel is effected. The TRADE are respectfully enjoined to send their orders DIRECT to the FACTORY, as the surest means of being supplied with a good article, and in lengths best suited to their roofs. The original works where the above roofing is made are F. McNEILL & CO.'S Manufactories, LAMB'S BUILDINGS, BUNHILL ROW. Roofs covered with McNEILL'S FELT to be seen at the CAMPS of ALDERSHOTT, CURRAGH, SHORNCLIFFE, and COLCHESTER, upwards of Three Millions of Feet; also the GREAT EXHIBITION BUILDING of 1862, of nearly One Million Feet. A Liberal Discount allowed to the Trade.

GUEST & CHRIMES, FOUNDRY and

GENERAL BRASS WORKS, Rotherham; and 37, Southampton-street, Strand, London, W.C.

London House, Mr. THOMAS BEGGS.



ESKHOLME'S PATENT PNEUMATIC REGULATOR and VALVE CLOSET.

Suitable for first and second class houses, being most efficient and simple, free from all smell, and requires no cisterns, service boxes, cranks, wires, or levers, but is complete in itself ready for attachment to any ordinary house service pipes. It is supplied in three qualities, all equally efficient, differing only as to the style of fitting up. A second class quality is also manufactured. The Regulators are usefully applied to the ordinary Pan Closet, alike dispensing with all cisterns, service boxes, levers, cranks, wires, &c. The Regulator is supplied separately, as well as connected to ordinary direct Service Main Cottage Water Closets.

Chrimes's Patent High pressure Single and Double Loose Valve and Screw Down Cocks; Improved Self-acting and Full Water-Closet; Patent Absolute Water Waste Preventer; Plumbers' and Gas-Fitters' Brass Work of every description. Drawings, Descriptions, Prices, and Testimonials will be forwarded per post on application as above.

J. TYLOR & SONS' PATENT

REGULATOR WATER-CLOSETS.

Valve. Pan.

The Regulator Valve gives perfect control over the supply of water to each closet, so that, however small the fall of water, perfect flushing is insured. Any number can be worked by one supply-pipe. No cistern valves, cranks, or wires required. The Closets can be seen in action at the Manufactory, and Illustrated Catalogues had on application to the Manufacturers, J. TYLOR & SONS, Warwick-lane, Newgate-street, London.

TERRA COTTA and Fine STONEWARE

POTTERY, warranted to stand Frost.

JOHN M. BLASHFIELD, STAMFORD POTTERY, STAMFORD, LINCOLNSHIRE, has greatly improved and economised the manufacture of TERRA COTTA and Fine STONEWARE for ARCHITECTURAL PURPOSES. He is able to make it of various new colours, so as to harmonize with Marble, Portland, and other Stones, and equal in hardness to Granite.

A Medal at the International Exhibition was awarded, in Class 10, Section C, Architectural Objects, for "Perfection in manufacture and beauty of form." A Medal was also awarded for "Terra[illegible]Cotta."

Moulded Bricks, String Courses, Copings, Cills, Tracery, Balusters, Capitals, Crosses, Terminals, Vases, Statues, Brackets, Consoles, Garden Edging, Guttering, six, nine, and twelve inch Paving Tiles, &c &c.

Also Plain and Mosaic Pavements for Halls, Churches, Conservatories, &c. in all colours.

London Office, 377, Oxford-street, W.

MINTON, HOLLINS, & CO. Stoke-upon-

Trent, beg to inform architects, the gentry, and others, that, in consequence of the increasing demand for their Encaustic and Mosaic Pavements, and with the view of facilitating the execution of orders, they have opened an additional Show-room, at their Establishment, No. 50, Conduit-street, London, where experienced draught-men will be constantly in attendance, to afford all information required.

DRAWINGS and ESTIMATES, on the receipt of plans, will also be promptly furnished, on application at the Manufactory, Stoke-upon-Trent.

MINTON & CO. take the present opportunity of stating that they have always in stock a large and varied assortment of tiles, suitable for flower boxes, stoves, and other ornamental purposes.

PRIZE MEDAL TO MAW & CO. INTERNATIONAL EXHIBITION 1862.

IMPERISHABLE TESSELATED

PAVEMENTS, combining a highly decorative and economical substitute for ordinary floors of their perishable coverings. MAW & CO.'S Pattern-book, designed by M. Digby Wyatt, esq. together with a special design and estimate of cost adapted to any given dimensions of hall, passage, conservatory, verandah, frieze, &c. will be sent on application to Benthal Works, Broseley, Salop.

May be seen at the Exhibition of Building Inventions, &c. now open at the Galleries of the Architectural Exhibition, 9, Conduit-street, free.

London Agents—W. B. SIMPSON & SONS, 456, West Strand, who have on view a great variety of Specimens of the Pavements.

PEAKE'S TERRO-METALLIC TILES,

PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21 Wharf, Macclesfield street North, City-road Basin, N. Sndly, that the trade term, "TERRO METALLIC," is the exclusive right of the Proprietor; and 3rdly, that the "Reports of the Juries," page 581, of the Great Exhibition, 1851, note the grant of a First-class Medal and rank the Manufactures known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

TWO PRIZE MEDALS AT THE INTERNATIONAL EXHIBITION.

MAGNUS'S ENAMELLED SLATE

obtained the Medal of the Society of Arts, the Prize Medal at the Great Exhibition, 1851, Two First-class Medals at the Paris Exhibition, and Two Prize Medals at the International Exhibition of 1862.

Trashy imitations of this beautiful material are being palmed upon the public. Architects are therefore requested to see that the name of "MAGNUS" is upon each article.

Chimney-pieces, Billiard-tables, Table-tops, Baths, Wall-linings, &c. a New Illustrated Catalogue of which can be had at the Pimlico Slate Works 39 and 40, Upper Belgrave-place, Pimlico, S.W.

The slabs may be viewed at St Katherine's Docks, and the blocks at the Place of Sale; where catalogues may be obtained; also of Messrs. PULLEN, HORNE, & EVERSFIELD, 80, Parliament-street, and 80, Fore-street, City.

GREAT QUEEN-STREET, LINCOLN'S-INN FIELDS. — Building Materials of Seven Houses—By order of the Committee of the Grand Lodge of Freemasons of England.

PULLEN, HORNE, & EVERSFIELD will SELL by AUCTION, on the PREMISES, on MONDAY, OCTOBER 5th, at TEN for ELEVEN, the MATERIALS and FITTINGS UP of SEVEN HOUSES in Queen's-place, Great Queen-street, Lincoln's-inn-fields, of the usual description, including the lot for the lead and New Buildings May be viewed the day previous and Catalogues had at the Office of F. P. COCKERELL, Esq. Architect, No. 3, Regent-street; and of PULLEN, HORNE, & EVERSFIELD, 80, Fore-street, E.C. and 40, Parliament-street, Westminster.

BANKSIDE.—Capital SAILING BARGES, suitable for the Brick Trade.

PULLEN, HORNE, & EVERSFIELD will SELL by AUCTION, at CARNE'S WHARF, 85, Bankside, Southwark, on WEDNESDAY, OCTOBER 7th, at TWELVE for ONE, the following superior SAILING BARGES, with their Rigging and Stores, viz —The "Claude," 80 tons; the "Robert," 75 tons; and the "William and George," 70 tons; all of which are half-decked, with hatches, spritsail rigged, well found in stores, and in good condition.—May be viewed three days previous; and catalogues had at the Place of Sale; at the Coal Exchange; and of PULLEN, HORNE, & EVERSFIELD, 40, Parliament-street, S.W. and 80, Fore-street, City.

BRULAH HILL, NORWOOD.—Capital detached Residence, let on lease at a low rent, offering a safe and improving investment, with prospect of early possession, and Two Plots of Building Land adjoining.

MESSRS. DEBENHAM & TEWSON will SELL, at the MART, on TUESDAY, OCTOBER 20, at TWELVE, in three lots (unless previously disposed of by private contract), an excellent detached RESIDENCE, known as The Grange, situate near the summit of Beulah hill, in one of the highest grounds in Surrey. It comprises eleven good bed-chambers, double drawing-room, dining room, library, breakfast-room, and capital domestic offices, lawn, flower and kitchen gardens. The property is occupied and let on lease at 140/. 10s. per annum, determinable at Midsummer, 1865, and underlet at an increased rental. Also a Plot of Freehold land and another Plot of Copyhold Land adjoining, possessing extensive frontages to the Grange road, commanding magnificent views, and adapted as a valuable addition to the above, or offering delightful sites for building; with a four-stall stable, shed, and cottage erected thereon.—Particulars of FRANCIS KEARSLEY, Esq. Solicitor, No. 32, Bucklersbury; and of the Auctioneers, 80, Cheapside.

LEYTONSTONE PARK.—Important Freehold Building Estate, of about 18 acres, only five minutes' walk from Leytoustone Station, and five miles' drive from London

MESSRS. DEBENHAM & TEWSON will SELL, at the MART, on TUESDAY, OCTOBER 20th, at TWELVE, a Valuable and Immediately Eligible FREEHOLD BUILDING ESTATE, known as Leytone Park Estate, and having frontages of upwards of 2 0 feet to the Woodford and Wanstead roads. The soil is a dry gravel; first-rate water is close at hand, gas mains pass the property, the drainage is good, and the air of the district pure and bracing. The railway fares are moderate, and trains very numerous to Bishopsgate-street and Fenchurch-street, and the great demand for houses leaves no doubt about a judiciously conceived building scheme being at once profitable; or the estate could be advantageously resold in lots, or let on building leases. The whole is land tax redeemed. Particulars of Messrs. COVERDALE, LEE, COLLYER-BRISTOW, & WITHERS, Solicitors, 4, Bedford-row; and of the Auctioneers, 80, Cheapside.

CITY of LONDON.—Valuable Freehold Properties, near Bishopsgate-street, occupying an area of nearly 9,000 square feet.

MESSRS. DEBENHAM & TEWSON have received instructions to SELL at the MART, on TUESDAY, OCTOBER 20, at TWELVE, in eight lots, Seventeen FREEHOLD HOUSES, some Living Shops, with yards and premises attached; comprising Nos. 5, 6, 7, 8, 10, 11, 17, 18, and 19, Widegate-street; Nos. 1, 2, 3, and 4, Sandy's-street; and Nos. 1 and 2, Sandy's-row; 17, Artillery-lane; and No. 5, Two Pair-yard, all within a few paces of Bishopsgate street. Some let on Lease, and others to yearly tenants, at very low rentals, amounting to 431/. per annum. Also a ground rent of 9/. per annum, secured on Nos. 26, 27, and 28, Widegate-street; and a plot of vacant ground in Catherine Wheel-alley. The vast improvements taking place in and around the City in every direction render property of this class exceedingly eligible as investments, and these lots afford valuable sites for warehouses, manufacturing premises, and model dwellings for the working classes.—Particulars, with plans of the estate, of HENRY BLYTH, Esq. Solicitor, 34, Essex-place, Holborn; and of the Auctioneers, 80, Cheapside.

TO RAILWAY CONTRACTORS, BUILDERS, and OTHERS.—Great SALE of RAILWAY PLANT, at the MIDDLETOWN STATION, on the Shrewsbury and Welshpool Railway, 12 miles from Shrewsbury, and 45 from Aberystwyth.—100 Tons of PERMANENT RAILS (new), 60 tons of temporary rails, 20 tons of sailing rails (new), 15 tons of scrap iron, 103 earth waggons, 16 ballast waggons, engine tender, three pairs of engine wheels, pile engines, stone and timber waggons, 13 carts, chaff engines, bean mill, 15 sets of horse gears, large trolley, 45 earth-waggon axles, 4 pedestals, 75 waggon couplers, 4 baists, 14 sets of break tackle, 16 spring bars, whines, 2 pairs of new cart arms, 2½ inch quantity of bridge centres, ladders, brick moulds and tables, engine tank, force-pumps, quantity of timber, Avery's & Pooley's patent weighing machines and weights, 2 pairs of 36-inch bellows, 3 anvils, quantity of blacksmiths' tools, 16 pulley-blocks, 3 strong vices, patent mortising machine, joiners' tools, and other valuable property.

MR. WILLIAM HALL is favoured with instructions from the Contractors of the Shrewsbury and Welshpool Railway, who have completed the line, to SELL by AUCTION, the foregoing, at the MIDDLETOWN STATION, on WEDNESDAY, the 30th day of SEPTEMBER, 1863. The 10-20 a.m. and the 12.15 trains from Shrewsbury, and the 11.30 train from Welshpool, will call at Middletown. Sale to commence at ONE o'clock, on the arrival of a train from Shrewsbury.—Particulars, in catalogues, to be had at the Auctioneer's Office, High street, Shrewsbury

TO TIMBER MERCHANTS, BUILDERS, CONTRACTORS, AND OTHERS.—Important Sale of a Timber Merchant. The Premises required for building purposes.

MR. MARSH has been favoured with instructions to SELL by PUBLIC AUCTION, on TUESDAY, 29th SEPTEMBER, 1863, on the PREMISES of S. Poole, Windmill-street, Lambeth, near the Palace, comprising 3,000 Yellow and White Flooring, 3,000 Yellow, White, and other Deals, Mahogany Scantlings, Slating Battens, and other goods.—Particulars in catalogues, which will appear three days prior to sale—Catalogues had on the premises, and of the Auctioneer, 20, Skinner-street, Bishopsgate, E.C.

TO MAHOGANY and TIMBER MERCHANTS, Cabinet, Pianoforte, Chair and Mangle Makers, Builders, Carpenters, and Others.—Camden-terrace, Camden-town.

HY. FREEMAN & CO. Brokers.
3, Crooked lane, Cannon street, E.C.

SUTTON, near the Station.—PLOTS of FREEHOLD BUILDING LAND FOR SALE. Land-tax redeemed, conveyance free. Also, PLOTS TO BE LET, on a Building Lease, for ninety nine years For plans, &c apply by post, pre-paid, to Mr. TRIBE, Builder, Sutton, Surrey, S.

FARNBOROUGH and ALDERSHOTT FREEHOLD and GROUND-RENT SOCIETY (Limited).—To BUILDERS and OTHERS.—Land on this Society's Estate at Farnborough, TO BE LET on building leases, or TO BE SOLD, upon liberal terms to suit purchasers All the Lots are staked out by the Architect, Mr. H. CURREY, 4, Lancaster-place, Strand, W.C.; or at the Offices of the Society, 18, New Bridge street, Blackfriars.
EDWARD CHATFIELD, Managing Director.

TO TIMBER MERCHANTS and OTHERS. TO BE SOLD, by PRIVATE CONTRACT, a first-class SITUATION for almost any Business, and especially for a Timber Merchant, where an extensive Business has been carried on for many years, near to Bargate Bridge, Boston The Premises have been fitted up with Machinery of a superior description within the last few years. A steam-engine, capable of working up to 30-horse power, with excellent boiler, vertical saw frame, circular saw benches, timber frame, moulding and planing machines, a superior tenoning machine, &c. &c. On the Estate there are two tenements, offices, and other things required to enable an active man to do a first-class business. The Estate and Machinery will be sold either together or divided, to suit purchasers.—Application to be made to Mr. WILLIAM STAINTON, the proprietor, to view and treat for the Property Boston, September 10th, 1863.

A PIECE of GROUND WANTED, to PURCHASE or RENT on long lease, not less than 180 feet by 60 feet, within half a mile of the South Kensington Museum, for establishing head-quarters for the 1st Middlesex Engineer Volunteers, Gravel with old buildings would not be objected to.—For particulars apply to Major HARVEY, 71, St. George's-road, Pimlico, S.W.

ELIGIBLE FREEHOLD BUILDING LAND, in KENT, within one mile of two stations on the North Kent Railway, and thirty minutes' ride from London Bridge or Charing cross—TO BE LET or SOLD, in large or small plots, from TEN to TWENTY ACRES of MEADOW LAND, on the high road to Erith, admirably adapted for gentlemen's residences and villas, delightfully situated, with fine views of the country and River Thames, near a church, gravelly soil, good water and gas laid down. Ground-rent moderate.—Apply to Mr. DAVENPORT, Land and Estate Agent, 35, Bucklersbury, City, E.C.

TO BUILDERS.—SEA SIDE, HERNE BAY, Kent.—TO BE LET, for Ninety-nine Years, at a moderate ground rent, THREE substantial brick built CARCASES; two intended for Shops, having together a frontage, on the south side of High-street, of 42 feet; and the third, a double-fronted House, with bay windows, having a frontage to Brunswick-street of 26 feet, excellent depths, and will be let separate in the south side, giving a back entrance to each house. Each of the Carcases is arranged for an eleven-roomed house, consisting of four floors and a basement, with areas, vaults, and a small yard in the rear. They are all fitted with well seasoned timber, and have slated roofs and thick lead gutters The House fronting Brunswick street, which is the road to and from the Herne Bay Railway Station, is admirably adapted for a private residence or for lodgings. A plot of land, 44 feet 4 inches frontage by 85 feet depth, next adjoining the carcases, and on which are erected brick wall, may also be had if required. The great demand for houses since the opening of the London, Chatham, and Dover Railway from London to Herne Bay, and which will shortly be opened to Margate and Ramsgate, makes this a desirable investment for Builders.—To view, apply to Capt. GARDINER, Herne Bay; and to treat, apply to Mr. WEBB, 31, Southampton-buildings, Holborn.

London:—Printed by CHARLES WYMAN, Printer, at the Printing-office of Cox & Wyman, Nos. 74 and 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-fields; and published by the said CHARLES WYMAN, at the Office of "The Builder," No. 1, York-street, in the Parish of St Paul, Covent-garden, both in the County of Middlesex.—Saturday, September 26, 1863.

GEORGE W. HASTINGS, Hon. General Secretary.

TO the BENEVOLENT. — SUBSCRIPTIONS are earnestly desired for GEORGE DEW, aged 9½ years, to assist in securing his ELECTION, in JANUARY next, to the LONDON ORPHAN ASYLUM, Clapton. His father was clerk of the works to the late Earl Jersey, subsequently a builder and contractor at Syresham. He died in January, 1862, of fever, leaving seven children entirely dependent on their mother, who is in very reduced circumstances and delicate health. One child is of weak intellect; a second, from deafness and defective sight, is quite incapacitated for every business living—Donations will be gladly received by the Rev. O. P. SERGEANT, the Rectory, Syresham, North Hants: the Rev. C. PEEL, the Rectory, Bonsham, Oxford; and Miss SMYTH, the Mount, Upper Norwood, Surrey, S.

SPRING GROVE BRICKFIELDS, HOUNSLOW, W. MIDDLESEX.—Mrs. ANN ELIZABETH BURCHETT begs to thank her numerous friends for the patronage received during the last twenty-five years, and having DISSOLVED PARTNERSHIP with her son Mr. JAMES BURCHETT, has again OPENED the above BRICKFIELDS on her own account, where by strict attention to all orders she trusts to receive the same encouragement hitherto so liberally bestowed upon her. Office—Caswell Cottage, Hounslow-road, Hounslow, W.

NOTICE.

BROWN & GREEN'S KITCHEN RANGE WAREHOUSE will shortly be REMOVED to the NEW PREMISES, 72—74, Bishopsgate-street Within, a few doors from the present establishment. These will afford accommodation for a still larger stock of their Patent Prize Medal Ranges and Stoves, Register Grates, and Cooking Utensils, to meet the great public demand; and also for the consequent more extensive execution, by the manufacturers themselves, of all descriptions of hot water, bath, laundry, and steam work.

81, Bishopsgate street Within, July, 1863

BILLING'S PATENTS.—CHIMNEY TERMINALS, THROAT VALVES.

NOTICE TO ARCHITECTS.—The Proprietors of the late Mr. Billing's Patents have secured the services of Mr. H. H. COLLINS, M.I.B.A. of No. 30 Poultry, E.C. as the Consulting Architect, to whom to refer for information as to their scientific application of the same. Estimates and the reduced prices may be obtained from the Manager, Mr. TYLER, 12, Abingdon street, Westminster, S.W.

COMPETITIONS.

TO ARCHITECTS.—COVENTRY and WARWICKSHIRE HOSPITAL.—The Committee of the above Hospital are desirous of receiving PLANS for a NEW HOSPITAL, to be built on the city of Coventry. The outlay not to exceed £5000 exclusive of fencing and draining. To provide accommodation for fifty beds for in-patients, baths, a waiting-room for out-patients, two one-shilling wards, house surgeon's and matron's rooms, servants' to be, operating room, carpentry, board room, and other rooms as for a hospital. The plans to be so arranged as to allow of future extension. Ground plans will be supplied on application to the Secretary. A premium of 20 guineas will be awarded to the second best design.—Plans to be sent in to the Secretary (on Plan bearing a motto and accompanied with a sealed envelope corresponding with such motto, and containing the name of the architect) on or before MONDAY, the 23rd day of NOVEMBER next.

Coventry, Sept. 15th, 1863. ALFRED J. SODEN, Secretary.

DESIGNS for "RAISING HOLBORN VALLEY."—To ARCHITECTS, ENGINEERS, and OTHERS. Notice is hereby given, that the Improvement Committee of the Corporation of London will meet at Guildhall on MONDAY, the 19th day of OCTOBER next, at ONE o'clock precisely, to receive DESIGNS, with descriptions, plans, sections, and estimates, for "RAISING HOLBORN VALLEY," and making such alterations as improvements in, and adjacent to Holborn-hill and Skinner street as would conduce to the convenience of the public and to the accommodation of the metropolitan traffic. The plans of the streets and suggested improvements to be drawn to the same scale as a plan of the locality which may be obtained at the Architects' Office, Guildhall, upon payment of 5s.; the property required to be taken to be coloured red on the general plan. Premiums of £200 and £100 respectively, will be given for the two most approved designs. Such designs will become the property of the Corporation; but the Corporation do not engage to employ in the execution of the work either of the persons whose designs may be so approved. The several designs, with all accompanying documents, must be delivered at the Town Clerk's Office, Guildhall, by TWELVE o'clock at noon precisely, on the above-mentioned day, sealed up and endorsed, "Holborn Valley."

WOODTHORPE.

CONTRACTS.

ST. MARYLEBONE, October 1st, 1863.

To BUILDERS, SEWER CONTRACTORS, &c.—Notice is hereby given that the Vestry of the parish of St. Marylebone, in the county of Middlesex, will meet in the Board Room of the Court House of the said parish on THURSDAY, the 15th day of OCTOBER, 1863, at ELEVEN o'clock in the forenoon, to receive TENDERS from persons willing to CONTRACT for BUILDING NEW BRICK SEWERS in Long-street, Bell-street, James-street, and part of Henrietta-street; UNDERPINNING and REPAIRING OLD SEWERS in Henrietta-street; and LAYING NEW PIPE SEWERS in Gray's-yard and Gee-court, all in the said parish of St. Marylebone. Further particulars may be known, and drawings and specifications seen, on application to the Vestry's surveyor Mr ROBERT SCALE, at his daily attendance at the Court House, from TWELVE till ONE o'clock. Tenders to be delivered to the Vestry Clerk, at the Court House, at or before ELEVEN o'clock in the forenoon of THURSDAY, the said 15th day of OCTOBER, sealed and endorsed "Tender for Sewers." No Tender will be received after that hour. The Contractor to find satisfactory securities for the performance of the works and to pay the expenses of the Bond and Contract. The Vestry will expect the parties Tendering, or some persons on their behalf, to be in attendance at the time of opening the Tenders. The Vestry do not pledge themselves to accept the lowest or any of the Tenders.—By order,

W. M. GREENWELL, Vestry Clerk.
